EMC Glove Roller

*A simple and easy way to air test
high voltage rubber gloves in the field*

Cat #GLOVECHEK

The EMC Glove Roller is a simple and easy tool for workers to use to air test high voltage rubber gloves in the field.

Please see video at <http://www.youtube.com/watch?v=8kirKNA-hTc>

Features:

- Traps more air in the glove allowing for larger inflation. **This will show damaged spots or defects better than rolling the glove by hand**
- Makes it easy to roll up the glove even when wearing winter leather gloves or mitts
- Ergonomical design
- Lightweight and easily stores in the rubber glove bag.
- Made of UV resistant material that will not harm the glove
- The glove roller will not crack, chip or become brittle in the cold weather. (Note: other materials such as PVC may splinter, crack, or chip . and possibly cut or pierce the rubber glove)
