[36] Trigger action mushroom heads are tamper proof in that a change of contact state is not possible by teasing or floating the operator. For emergency stop applications, always use a trigger action push button (per EN/IEC 13850).

[37] Other key numbers:

—key no. 421E: add the suffix 12 to the catalog number.

—key no. 458A: add the suffix 10 to the catalog number.

—key no. 520E: add the suffix 14 to the catalog number.

—key no. 3131A: add the suffix 20 to the catalog number.

Example: The catalog number for a Ø 40 mm red mushroom head for a trigger action, maintained push button, with release by key no. 421E becomes: ZB5AS94412.

ZBRN1 and ZBRN2 Access Points

The access point of Harmony® wireless and batteryless range provides network connectivity openness by operating as an intermediate equipment between the transmitter and the PLC (Programmable Logic Controller). The access point receives radio signals from the transmitters and converts them to communication protocols. Based on the model, it is connected to the PLC using either RS485 Modbus™ Serial line or Modbus/TCP protocol.

The access point can be used with transmitters such as XB4R and XB5R wireless and batteryless push buttons, rope pull switch, mushroom head push button (1), and all PLCs that support Modbus Serial line over RS485 or Modbus/TCP protocols.

Depending on the application, an external or a relay antenna can be used to improve signal reception. An access point can support up to 60 radio transmitters

[12] ▲ Add the voltage assembly code as chosen from Table 19.167 Standard Light Modules for Types K, SK, and KX Control Units, page 19-63. **Example:** KR8P with a 277 V 50-60 Hz voltage = KR8P8.

[13] The knob must be the same color as the LED light module chosen, for example, for a green LED, use a green knob.

[14] On neon light modules, use clear knobs only.

[15] These colors are not available on illuminated push-pull operators.

[16] When ordering, add prefix 9001 to the catalog number.

[17] These operators can be ordered complete with contact blocks. For maximum block usage, refer to bullets to the right of "H" Codes, page 19-65. Add the "H" number to the end of the operator type number. Additional "H" numbers are available.

[18] Add the color code as chosen from the color cap table. Example: K2L25 with a blue 1-3/8 in. mushroom button = K2L25L20.

[19] ■ Add the voltage assembly code as chosen from Standard and Shallow Depth Light Modules, page 19-63. Example: K2L with 240 Vac/Vdc = K2L25.

[20] On neon light modules, use clear color caps only.

[21] The cap must be the same color as the LED light module chosen, e.g., for red LED, use red color cap.

[22] The only difference between a no guard (K2L_) operator and mushroom button operator is the color cap.

NOTE: For Outline Dimensions see Catalog 9001CT1103

NOTE: When ordering, add prefix 9001 to the catalog number.

When ordering, please specify:

- Quantity
- Class Number
- Type or Catalog Number

For "H" Numbers, see Type K, SK, and KX Contact Block "H" Numbers, page 19-65

Selection
Shown below is a simplified method of selecting a selector switch to meet almost any combination of contact sequences.

Step No. 1
Determine the contact sequence(s) required. Set up a target table like the one shown for the example below.

Contact Sequence 0—contact open 1— contact closed	↖	↑	↗
A	1	0	0
B	0	1	0
C	0	0	1

Step No. 2
Look for a cam type common to all sequences in:
Table 19.137 2 Position Selector Switch, page 19-53,
Table 19.138 3 Position Selector Switch, page 19-53, or
Table 19.139 4 Position Selector Switch, page 19-53.
For the example above, Table 19.138 3 Position Selector Switch, page 19-53 would be used.
For the contact sequences A (1 0 0), B (0 1 0) and C (0 0 1) of the example above, cam types F and L are common to all three sequences.

Step No. 3
Next, use the cam type common to all the sequences (if several cam types are common, choose one) to find the operator type number. Go to the proper reference topic as indicated in the table below:

Number of Positions	Push Button Line	Reference topics
2	Type K, Type SK, Type KX	Type K, page 19-50 Type SK, page 19-58 "H" Numbers, page 19-65 Type KX with Contacts, page 19-59 Type KX without Contacts, page 19-59
3	Type K, Type SK, Type KX	Type K, page 19-51 Type SK, page 19-59 "H" Numbers, page 19-65 Type KX with Contacts, page 19-59 Type KX without Contacts, page 19-59
4	Type K, Type SK, Type KX	Type K, page 19-52 Type SK, page 19-60 Type KX, page 19-60

If for the example above a manual return operator with a standard black knob is required and:
The F cam type is chosen, the operator type number is:

- Type K—Class 9001 Type KS46B, page 19-51
- Type SK—Class 9001 Type SKS46B, page 19-59
- Type KX—Class 9001 Type KXSDFB, page 19-59

The L cam type is chosen, the operator type number is:

- Type K—Class 9001 Type KS401B, page 19-51
- Type SK—Class 9001 Type SKS401B, page 19-59
- Type KX—Class 9001 Type KXSDLB, page 19-59

Step No. 4:
Determine the contact blocks required by using the same table in Step No. 2.
If, for the example above, the F cam type is chosen:

- Use a 9001KA3 mounted on side no. 2 for sequence A (1 0 0).
- Use a 9001KA3 mounted on side no. 1 for sequence B (0 1 0).
- Use a 9001KA2 mounted on side no. 1 or 2 for sequence C (0 0 1).

If, for the example above, the L cam type is chosen:

- Use a 9001KA2 mounted on side no. 2 for sequence A (1 0 0).
- Use a 9001KA2 mounted on side no. 1 or a 9001KA3 mounted on side no. 2 for sequence B (0 1 0).
- Use a 9001KA3 mounted on side no. 1 for sequence C (0 0 1).

One Type KA1 double circuit block can be used in place of one Type KA2 single circuit block plus one Type KA3 single circuit block mounted on the same side.

[42] See Type K, SK, and KX Contact Block "H" Numbers, page 19-65

[43] Type KA5 must be the last block on either side. If more than one KA5 is required on either side—contact your local Square D sales office.

[46] When ordering, add prefix 9001 to the catalog number.

[47] ■ Add the color code as chosen from Table 19.141 Color Caps, page 19-54. EXAMPLE: KP1 with a blue fresnel cap = KP1L31

[48] The cap must be the same color as the LED light module chosen, e.g., for green LED, use green color cap.

[49] On neon light modules, use clear color caps only.

[50] On remote test pilot lights use only full voltage or resistor voltage assembly codes. Do not choose LED (exception - these LED codes are allowed: 38LG, 38LL, 38LR, 38LW, 38LY), neon or transformer codes. For AC use only.

^[58] These operators can be ordered complete with contact blocks. For maximum block usage, see "H" Codes, page 19-65. Add the chosen "H" number to the end of the operator.

^[59] On neon light modules, use clear knobs only.

^[60] ▲ See Table 19.147 Color Codes, page 19-56 and insert the color code in the Type number. Example: SKR9() with a yellow knob = SKR9Y

^[61] To obtain a red knob with "Push Emergency Stop" printed on the red knob—substitute "R05" in place of "R"

^[64] The knob must be the same color as the LED light module chosen, for example, for a green LED, use a green knob.

[69] On neon light modules, use clear color caps only.

[70] Add the color code as chosen from the color cap table below. **EXAMPLE:** SK2L25 with a blue 1-3/8 in. mushroom button = SK2L25L20.

[71] The cap must be the same color as the LED light module chosen, e.g., for green LED, use green color cap.

[72] The only difference between a no guard (SK2L) operator and mushroom button operator is the color cap.

Typical Wiring Diagram

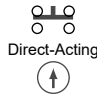

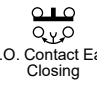

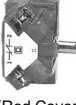

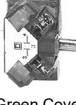

NOTE: To select and order Contact Blocks, Light Modules, Knobs, and Accessories, see Type KA Contact Blocks, page 19-62 through Hermetically Sealed Power Reed Contact Blocks, page 19-64.
NOTE: For use in hazardous locations—See Square D Offering According to Class, Division, and Group, page 19-64. Contact blocks and legend plate not included unless otherwise noted.

[89] When ordering, add prefix 9001 to the catalog number.
 [90] ▲ Add the voltage assembly code as chosen from Standard and Shallow Depth Light Modules, page 19-63. **EXAMPLE:** SKT***R31 with 208 Vac red LED voltage = SKT37LRR31.
 [91] ■ Add the color code as chosen from the color cap table below. **EXAMPLE:** SKP1 with a blue fresnel cap = SKP1L31.
 [92] The cap must be the same color as the LED light module chosen, e.g., for a green LED, use a green color cap.
 [93] On neon light modules, use clear color caps only.
 [94] Use only full voltage or resistor voltage assembly codes on remote test pilot lights. Do not choose LED, neon or transformer codes. For AC use only.
 [95] Use only full voltage or resistor voltage assembly codes on remote test pilot lights. Do not choose LED (exception — these LED codes are allowed: 38LG, 38LL, 38LR, 38LW, 38LY), neon or transformer codes. For AC use only.
 [96] Add the color code as chosen from the color cap table below. **EXAMPLE:** SKP1 with a blue fresnel cap = SKP1L31.

Type KA Contact Blocks

The Class 9001 Type KA contact blocks are Fingersafe® contact blocks (meeting VDE 0106 Part 100). They have one screw mounting and captive (backed out) plus/minus terminal screws. These contact blocks are double-break, direct-acting contacts. Because of the wiping action of these contacts, they are suitable for use with programmable controllers. All contact blocks listed below accept up to 2 #12–#24 AWG solid or stranded wires. Recommended tightening torque for screw terminals is 7 lb-in.

- Terminals that accept ring tongue/fork tongue connectors
- Short single circuit contact blocks (0.75" deep vs. 0.97" deep on the Fingersafe)
- Same as old style Series G product available prior to March, 1989.
- For assembled operators, use form Y238 (add to catalog number as suffix, for example: 9001KRU1H13Y238)

[100] For use with all operators except KX and remote test pilot.

[101] For use in hazardous locations—See Square D Offering According to Class, Division, and Group, page 19-64.

[102] With LED light modules, use either a clear color cap or a cap the same color as the LED.

[103] With neon type light modules, use a clear color cap only.

[104] When ordering, add prefix 9001 to the catalog number.

[105] Not for use on KX operators.

[106] Reduces the depth of illuminated push buttons with contact blocks by over 33%.

Hazardous locations do not always require the use of explosion-proof equipment like the Class 9001 Type BR control stations. Selecting the most appropriate device for the location can save you money. For more information on the types of hazardous locations, contact your local electrical inspector.

Type K, SK, and KX Contact Block “H” Numbers

The design of Class 9001 Type KA contact blocks allows them to be mounted side by side and/or in tandem. This enables you to specify an operator and a specific arrangement of contact blocks (shipped fully assembled) with a single Type number.

Instructions for 9003K2 Key Sheet

The Key Sheet for ordering a 9003K2 cam switch is on [page 19-70](#), and an example of a completed key sheet is on [page 19-71](#). The instructions below are for filling out the key sheet on [page 19-70](#).

1. Select the box for K2 (20 A).
2. Identify the Product quantity in the box provided.
3. Verify front mounting by selecting the box: Front Mounting.
4. If ordering a base/contact block only, select 22 mm plastic or 22 mm metal mounting. Then complete the following:
 - a. ③ Switching Angle (positions)
 - b. ④ Contact scheme and jumpers (pre-wired)
5. If ordering a complete switch (base/contact block, head, legend), check the box. Then complete the following:
 - a. ① Operating head preference
 - b. ② Legend preference
 - c. ③ Switching angle (positions)
 - d. ④ Contact scheme and jumpers (pre-wired)
6. Operating head preference ① (identify the operating head preferred)
7. Legend preference ② (identify the legend preference)
8. Switching angle (positions) ③ and special legend marking
 - a. Identify whether the switch need is 30° or 60°, or 45° or 90° switching angle.
 - b. Fill in the legend markings desired at the positions indicated. Zero degrees is always straight up.
9. The rotation of the operator stops clockwise at the top or 0° position. If full rotation through 360° is desired, the Full rotation through 360° box must be checked.
10. Contact scheme and jumpers (pre-wired) ④
 - a. If jumpers are desired to be pre-wired, draw a horizontal line between the terminals to be jumpered per the example on [page 19-71](#).
 - b. Refer to the Legend at the bottom of [page 19-70](#) for contact sequences, i.e.: X indicates contact closure. See [page 19-71](#) for examples of filling in this portion of the key sheet.

Foot Switch Selection

Foot switches are used to control many industrial processes, while leaving the operator's hands free to perform other functions. The type or model of foot switch suitable for each application will vary depending on factors such as the control function required, degree of protection required, production methods, unusual conditions, government regulations, etc. In some applications more than one foot switch may be required, as when two or more persons are operating a machine. In these cases, safe practice and regulations require that the foot switches be wired in series making it necessary that each operator's foot switch be actuated before the machine will cycle.

Only the user can be aware of all the conditions and factors present during setup, operation and maintenance of the machine; therefore, only the user can determine which foot switch(es) can be properly used. When selecting a foot switch for a particular application, the user should refer to the applicable ANSI standards and OSHA regulations. The National Safety Council's Accident Prevention Manual also provides much useful information.

In some applications, such as power presses, additional operator protection such as point-of-operation guarding must be provided when a foot switch is used as an actuator. This is necessary since the operator's hands and other parts of the body are free to enter the pinch point area and serious injury can occur. The shielding provided on foot switches cannot protect an operator from injury. For this reason the foot switch cannot be substituted for or take the place of point-of-operation protection.

A Trilingual Danger Sign regarding the need for point-of-operation protection is supplied with each foot switch. The sign incorporates three languages: English, Spanish and French. Additional copies of the sign are available by contacting your Square D sales office.

Type AW Fully Shielded Foot Switch with Oversized Pedal Shield, Side Shields and Safety Door. The Safety Door is interlocked with the pedal to prevent operation due to shock or vibration. It prevents accidental pedal operation by requiring a simple but intentional motion to lift the door before inserting the foot.

Operating Temperature:
-30 to +60 °C (-22 to +140 °F)

- [1] When ordering, add prefix "9002" to the catalog number.
- [2] WARNING: These foot switches must not be used to operate machines or equipment where the possibility of operator injury exists. Typical uses include Emergency Stop functions, "Dead Man" controls, signal functions (lights, bells, etc.).
- [3] A single pole snap switch that contains two double break contact elements (1 N.O. and 1 N.C.) must be used on circuits of same polarity. A double pole snap switch contains two electrically separated sets of contact elements allowing use on circuits of opposite polarity. Each set that contains two double break contact elements (1 N.O. and 1 N.C.) must be used on circuits of same polarity.
- [4] 2 N.O. and 2 N.C. isolated, direct acting contacts.
- [5] For replacement cover drilled to accept latch. For Series C foot switches order AC9. No replacement cover available for Series A or B devices drilled to accept latch. AC8 is spring return only.
