TM238 LFDC24DT

TM238 LFAC24DR

SoMachine software platform

### Presentation

Modicon M238 compact logic controllers offer an “all-in-one” solution in a compact unit (157 x 118 x 86 mm excluding extension modules). Four models are available, with different embedded communications and supply voltages.

Models TM238 LDD24DT and TM238 LFDC24DT, powered with 24 V  $\pm$  offer:

- 14 x 24 V  $\pm$  inputs, including 8 fast inputs, dedicated to special functions such as high-speed counting (HSC)
  - 10 x 24 V  $\pm$  solid state outputs, including 4 fast outputs, dedicated to special functions such as PWM and PTO.
  - An RS 232/RS 485 serial link (SoMachine-Network, Modbus, ASCII protocols)
- Model **TM238 LFDC24DT** also has:
- A CANopen bus master link
  - A second RS 485 serial link (SoMachine-Network, Modbus, ASCII protocols)

Models **TM238 LDA24DR** and **TM238 LFAC24DR**, powered with 100-240 V  $\sim$  offer:

- 14 x 24 V  $\pm$  inputs, including 8 fast inputs, dedicated to special functions such as high-speed counting (HSC)
  - 4 x 24 V  $\pm$  solid state outputs, dedicated to HSC reflex functions, and 6 relay outputs
  - An RS 232/RS 485 serial link (SoMachine-Network, Modbus, ASCII protocols)
- Model **TM238 LFAC24DR** also has:
- A CANopen bus master link
  - A second RS 485 serial link (SoMachine-Network, Modbus, ASCII protocols).

■ The number of I/O can be expanded on all four models by adding up to 7 extension modules (1) of the following type on the right-hand side of the base unit:

- Discrete **TM2 DDI/DDO/DMM/DRA**
- Analog **TM2 AMI/ALM/ARI/AMO/AVO/AMM**
- up to 3 High-speed counter **TM200 HSC206DT/DF**
- up to 2 AS-Interface master module **TWD NOI 10M3**.

Modems or communication gateways can be connected to the serial links in order to expand the connectivity capability to include Ethernet Modbus/TCP, Profibus DP, DeviceNet, etc..

**Note:** A serial link on each controller delivers a 5 V  $\pm$  voltage dedicated primarily to powering a Magelis display unit or Small panel terminal **XBT N●00/R400/RT500** or the Ethernet gateway **499 TWD 01100**.

The compact controller solution also has great flexibility in terms of wiring. With discrete I/O extension modules, several connection options are available, including removable screw terminals, spring terminals and HE 10 connectors, providing simple, quick, safe wiring. The Advantys Telefast ABE 7 prewiring system can be used for easy connection of extension modules with HE 10 connectors.

(1) The addition of 7 extension modules allows a maximum number per configuration of 136/192/248 I/O (depending on whether extension modules with screw terminals, spring terminals or HE 10 connectors are being used).

### Design and installation of Modicon M238 applications

Schneider Electric's **SoMachine** software platform can be used to program Modicon M238 controllers using:

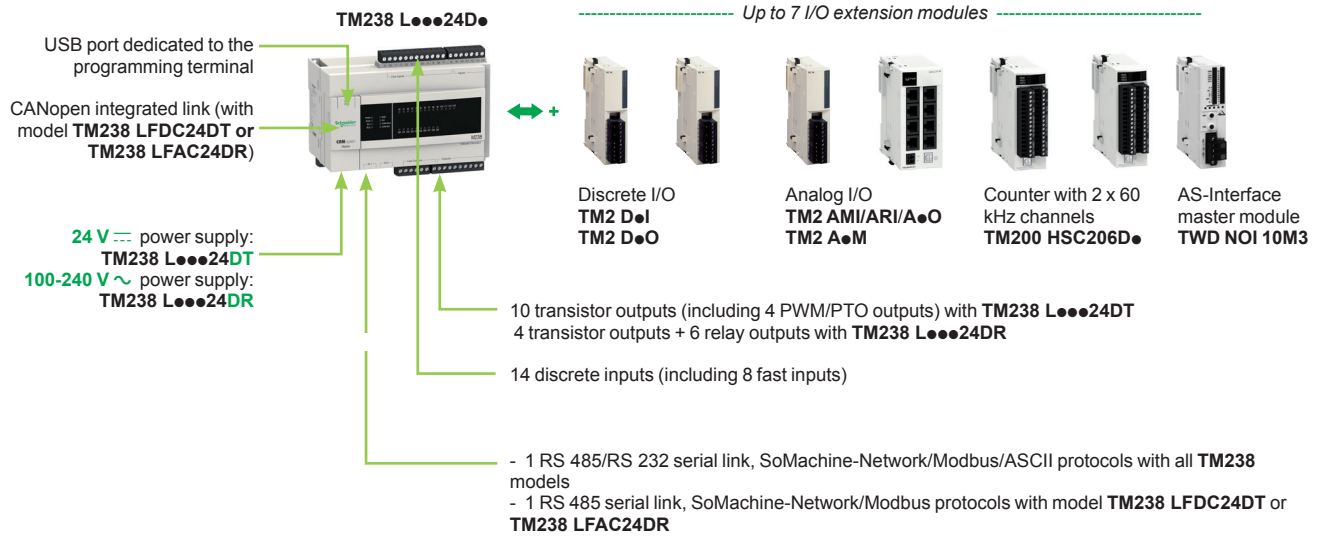

- IEC 61131-3 programming languages: Instruction List (IL), Ladder Diagram (LD), Function Block Diagram (FBD), Sequential Function Chart/Grafset (SFC) and Structured Text (ST)
- CFC (Continuous Function Chart) language.

### Modicon M238, the solution for packaging and conveying machines

The Modicon M238 controller's languages, dedicated function blocks and integrated functions (HSC (high-speed counting), PTO (Pulse Train Outputs) and PWM (Pulse Width Modulation) mean that Modicon M238 controllers are ideal for use with Altivar variable speed drives, Lexium servo drives and Magelis HMI terminals in packaging machine applications:

- Vertical bagging machines
- Vertical packaging machines
- Rotary or linear labelling machines
- Conveyors
- Etc.

### Compact base configuration

### Description

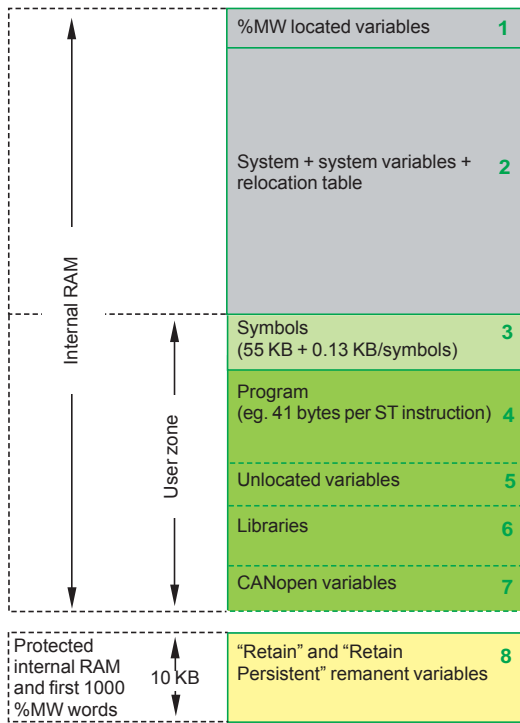

The Modicon M238 logic controller bases **TM238 LDD24DT/LFDC24DT** and **TM238 LDA24DR/LFAC24DR** comprise:

- 1 A mini B USB connector, marked Prg. Port, for connecting a programming terminal
- 2 A hinged access cover with 2 cable glands (1 removable for the terminal cordset and 1 for the CANopen cable)
- 3 A removable screw terminal block (12 terminals) for connecting the sensors (24 V  $\text{---}$  fast inputs)
- 4 A removable screw terminal block (7 terminals) for connecting the sensors (24 V  $\text{---}$  inputs)
- 5 A connector for up to 7 discrete **TM2 D●●**, analog **TM2 A●●**, counter **TM200 HSC206D●**, and up to 2 AS-Interface master module **TWD NOI10M3** I/O extension modules
- 6 A display unit showing:
  - The controller status by means of 4 LEDs (PWR, RUN, Batt and Err)
  - The integrated communication port status by means of 4 LEDs (SL1, SL2, CAN Run and CAN Err)
- 7 A display unit showing the I/O states (I0...I13 and Q0...Q9)
- 8 A removable screw terminal block (10 terminals) for connecting 6 preactuators
- 9 A removable screw terminal block (6 terminals) for connecting 4 preactuators
- 10 A removable screw terminal block (5 terminals marked CANopen) for connection to the CANopen bus, with model **TM238 LFDC24DT** or **TM238 LFAC24DR**

**Accessible from the underside of the controller:**

- 11 A removable screw terminal block (3 terminals):
  - +, -,  $\text{---}$  marked 24 VDC for connecting the 24 V  $\text{---}$  power supply
  - L, N,  $\text{---}$  marked 100-240 VAC for connecting the 100-240 V  $\sim$  power supply
- 12 One RJ45 connector marked SL1 (with model **TM238 LDD24DT** or **TM238 LDA24DR**) or 2 RJ45 connectors marked SL1 and SL2 (with model **TM238 LFDC24DT** or **TM238 LFAC24DR**) for connecting the serial links
- 13 A hinged cover for accessing the RAM backup battery (optional) and the internal real-time clock

The compact bases are mounted as standard on a symmetrical  $\text{---}$  rail or on a metal plate (two  $\text{---}$  holes).

### Memory structure

Modicon M238 controllers offer great flexibility in memory management. Depending on the model used, they have a user memory zone of:

- 500 KB with **TM238 LDD24DT** or **TM238 LDA24DR** base
- 1024 KB with **TM238 LFDC24DT** or **TM238 LFAC24DR** base.

This user memory zone is divided according to the application program requirements and the volume needed by the symbols, unlocated variables and libraries required by the application.

The memory structure of Modicon M238 controllers is shown opposite.

The table below lists the maximum memory capacities depending on the model (1).

		TM238 LDD24DT, TM238 LDA24DR	TM238 LFDC24DT, TM238 LFAC24DR
<b>Internal RAM</b>	<b>KB</b>	1024	2048
1 Located variables	<b>KB</b>	120 (60,000 %MW)	120 (60,000 %MW)
2 System + system variables + relocation table	<b>KB</b>	400	900
<b>User zone</b>	<b>KB</b>	500	1000
3 Symbols	<b>KB</b>	100 (max. 400 symbols)	200 (max. 1000 symbols)
4 Program (including online program modification)		As required by the application, within the limits of the size of the user zone	
5 Unlocated variables			
6 Libraries			
7 CANopen variables	<b>KB</b>	–	115 + 10 per slave
<b>Protected internal RAM</b>	<b>KB</b>	10	10
8 "Retain" variables	<b>Bytes</b>	8168	8168
8 "Retain Persistent" variables	<b>Bytes</b>	400	400
8 First 1000 %MW words	<b>Bytes</b>	2000	2000

(1) Values given for information only.

### Storing variables

Remanent variables can be one of two types depending on their declaration in the application:

- "Retain" variables, 8168 bytes maximum
- "Retain Persistent" variables, 400 bytes maximum.

The first 1000 located variables 1 (first 1000 %MW words) and all the unlocated variables 5 configured as "Retain" and "Retain Persistent" type are backed up by the internal battery or by the optional external battery. They are maintained when the power returns if the startup context allows this (see "Restart context" below). In addition, "Retain Persistent" type variables are maintained on a change of application if the startup context allows this (see "Restart context" below).

### Restart context

The state of the remanent memory before disconnection is restored on the next power-up when the internal battery and/or the optional external battery is/are capable of protecting the internal RAM (no memory checksum error). If the internal battery or optional external battery does not have enough charge to back up the internal RAM, the values of the "Retain" and "Retain Persistent" remanent variables are reset to 0.

The external battery can be monitored by the *GetBatteryLevel* software function, and its charging status is visible from the status of the Batt LED on the front of the controller.

### Storing the program

Regardless of the context and status of the internal battery and/or optional external battery, the program is backed up in the Flash EEPROM during the "boot application" creation procedure (SoMachine software procedure).

Environment			
Type of base		TM238 LDD24DT, TM238 LDA24DR, TM238 LFDC24DT, TM238 LFAC24DR	
Certifications		<ul style="list-style-type: none"> <li>■ For all bases: CE, UL, CSA, ACA (C-Tick), GOST (pending)</li> <li>■ For TM238 LDA24DR and TM238 LFAC24DR bases: CSA (Class 1, Division 2, Groups A, B, C, D)</li> </ul>	
Temperature	Operation	°C	- 10...+ 55
	Storage	°C	- 40...+ 70
Relative humidity		95% max. without condensation	
Degree of	Protection	IP 20	
	Pollution	≤ 2	
Altitude	Operation	m	0...2000
	Storage	m	0...3000
Immunity to mechanical stress	Sinusoidal vibration	5...150 Hz with 3.5 mm amplitude at 1 g Endurance: 10 cycles of 1 octave/min per axis	
	Shock	15 g/11 ms; 3 shocks/direction/axis	

Characteristics of the compact bases						
Type of base		TM238 LDD24DT	TM238 LDA24DR	TM238 LFDC24DT	TM238 LFAC24DR	
Backup components	Protected internal RAM		"Retain" and "Retain Persistent" type variables (types declared at the time of configuration)			
	Type of component	Internal battery	Type VL1220, 7mAh non-replaceable			
		Optional battery	Lithium thionyl chloride TSX PLP 01			
	Backup autonomy	Internal battery	3 days			
		Optional battery	1 year			
	Charging time	Internal battery	hrs	22 for a full charge		
Service life	Internal battery	10 years max. (derating depending on the operating temperature)				
Discrete I/O	No. of 24 V $\overline{\text{V}}$ inputs		14, 8 of which can be configured as fast inputs			
	No. of outputs		10 transistor, 4 of which can be configured as fast outputs	4 transistor + 6 relay	10 transistor, 4 of which can be configured as fast outputs	4 transistor + 6 relay
	Connection via		4 removable screw terminal blocks (supplied as standard) 4 removable spring terminal blocks with optional unit TM238 RSSPT (to be ordered separately)			
I/O extension	Max. number of modules		7: discrete, analog, high-speed counter, AS-Interface master (3 high-speed counter TM200HSC060●●, 2 TWDNOI10M3 AS-Interface master)			
	Max. number of discrete I/O		136/192/248 (1)			
Embedded communication	Serial link		1 RS 232/RS 485 channel (SL1) delivering a 5 V $\overline{\text{V}}$ voltage		1 RS 232/RS 485 channel (SL1) 1 RS 485 channel (SL2) delivering a 5 V $\overline{\text{V}}$ voltage	
	CANopen		– 1 master for 16 slaves max.			
Real-time clock		Integrated. Drift: 10 s a month at 25°C				
User zone in internal RAM (see page 4)	Capacity		KB	500	1000	
	No. of instructions		10 Kinstructions depending on the language and type of instruction used		25 Kinstructions depending on the language and type of instruction used	
Application structure	Master task		1 task configurable as "Freewheeling" or "Cyclic" 1 "Freewheeling" task max. among different choices			
	Auxiliary tasks		2 tasks configurable as "Freewheeling", "Cyclic", or "Event", tripped on the rising and/or falling edge of a Boolean variable			
	Interrupt tasks		4 "External" tasks tripped by the fast inputs or by the integrated counter channels			
	Priority between tasks		32 levels of priority of execution can be assigned to each of the 7 tasks			
I/O assignment	I/O on base		Read/write by the task which uses the I/O integrated in the base			
	I/O on extension modules		Read/write by the master task regardless of which task is using the extension module I/O			
	I/O on CANopen bus		–		Read/write by the master task regardless of which task is using the I/O on the CANopen bus	

(1) The 1<sup>st</sup> value corresponds to the maximum number of I/O (base and extensions) with extension modules with screw terminals, the 2<sup>nd</sup> to extension modules with spring terminals and the 3<sup>rd</sup> to extension modules with HE 10 connectors.

Characteristics of the compact bases					
Type of base		TM238 LDD24DT, TM238 LDA24DR, TM238 LFDC24DT, TM238 LFAC24DR			
Typical no. of Kinstructions executed per ms	70% Boolean + 30% fixed arithmetic	Kinst/ ms	3		
Execution time for one instruction	Boolean	µs	0.971		
	Arithmetic +, -, x operations	µs	INT word	REAL floating point	
			0.439	5.111	
	/ operation	µs	–	7.25	
	LD and ST	µs	0.42	0.648	
Event task execution time (1)		ms	0.75 min	0.95 typical	
Master task system overhead	I/O and system	ms	0.9		
	Counting	ms	0.15 (simple counting), 0.35 (advanced counting)		
	Motion	ms	0.15 (PWM, frequency meter), 0.20 (PTO) (2)		
Power supply					
Type of compact base		TM238 LDD24DT	TM238 LFDC24DT	TM238 LDA24DR	TM238 LFAC24DR
Voltage	Nominal	V	24 --- (- 15% / + 20 %)		100-240 V ~ (+ 10% / - 15 %)
	Limit (including ripple)	V	19.2...28.8 ---		85...264 V ~ (Frequency 47...63 Hz)
Sensor power supply			Use an external 24 V --- Phaseo power supply from the Optimum range		
Max. inrush current (Un)		A	35		
Immunity to micro-cuts (class PS-2)		ms	10		
Max. consumption		W	17.2		25 at 100 V ~, 42 at 264 V ~
Dielectric strength	Between power supply terminals and earth terminals	V rms	500 --- for 1 min		1500 --- for 1 min
	Between I/O terminals and earth terminals	V rms	500 --- for 1 min		1500 --- for 1 min
Isolation resistance	Between power supply terminals and earth terminals	MΩ	> 10 (500 V ---)		> 10 (500 V ---)
	Between I/O terminals and earth terminals	MΩ	> 10 (500 V ---)		> 10 (500 V ---)

(1) Time including acquisition of the event, processing of 100 IL instructions and activation of an output.

(2) Only with **TM238 LDD24DT** and **TM238 LFDC24DT**.

Communication					
Type of compact base			TM238 LDD24DT, TM238 LDA24DR	TM238 LFDC24DT, TM238 LFAC24DR	
<b>Terminal port</b> "Prg. Port"	Type		1 USB 2.0		
	Connection		Mini B USB connector		
<b>RS 485/ RS 232 serial port</b>	Marking on front panel		<b>SL1</b>	<b>SL1 (1)</b>	
	Type		Master/slave type isolated serial link

			–	Modbus master/slave RTU/ASCII, ASCII, SoMachine-Network	
	Peripheral		–	Delivers a 5 V $\pm$ /200 mA power supply (2)	
Connection		–	RJ45 female connector		
<b>CANopen port</b>	Standards		–	DS 301 V4.02, DR 303-1	
	Class		–	Conformity class M20, limited to 16 slaves	
	Data rate	Max. length	<b>m</b>	–	<b>20</b>   <b>50</b>   <b>100</b>   <b>125</b>   <b>250</b>   <b>500</b>   <b>1000</b>
		Data rate	<b>Kbps</b>	–	1000   800   500   425   250   125   50
	No. of slaves		–	–	16 max. with max. limit of: 64 TPDOs and 64 RPDOs (3)
	Line matching		–	–	Line termination resistor supplied with the screw terminal block, to be mounted when necessary
	Connection		–	–	Removable screw terminal block supplied with the base
Integrated functions					
Type of compact base			TM238 LDD24DT, TM238 LFDC24DT	TM238 LDA24DR, TM238 LFAC24DR	
<b>HSC</b>	No. of channels		8 x 100 kHz simple channels, 4 x 100 kHz simple channels and 1 x 100 kHz advanced channel (4) or 2 x 100 kHz advanced channels (4)		
	Capacity		32 bits		
<b>Motion or Reflex functions</b>	No. of channels		2 advanced channels	4	
	Frequency		PMW: 20 kHz PTO: 100 kHz	100 Hz	
	Functions		PWM (Pulse Width Modulation) output PTO (Pulse Train Output)	HSC reflex	
<b>PID regulation</b>			Yes		
<b>Event processing</b>			Yes, up to 4 event tasks that can be activated by the base's fast inputs or by the integrated counter channels (threshold attained)		

(1) Serial link "SL1" and serial link "SL2" are not isolated from one another.

(2) 5 V  $\pm$ /200 mA power supply for self-powering of a Magelis XBT N/R HMI terminal or the Ethernet gateway 499 TWD 01100.

(3) TPDOs: transmitted process data objects (PDOs). RPDOs: received process data objects (PDOs).

(4) Advanced channel with two-phase signal inputs for encoder, threshold detection function and reflex function.

--- input characteristics				
Type of compact base			TM238 LDD24DT, TM238 LFDC24DT, TM238 LDA24DR, TM238 LFAC24DR	
Type of input			Physical inputs I8 to I13	Physical inputs I0 to I7
Number of input channels			6	8, 100 kHz max.
Nominal input values	Voltage	V	24 ---	
	Current	mA	10.4	8
Input logic			Sink/source (positive/negative)	Sink (positive)
Commons			1	4
Sensor power supply (including ripple)			V	19.2...30 ---
Input limit values	At state 1	Voltage	V	≥ 15
		Current	mA	≥ 2
	At state 0	Voltage	V	≤ 5
		Current	mA	≤ 1.5
Input impedance			kΩ	2.3
Response time				3 ms
Digital filtering (configurable)			ms	–
Anti-bounce filtering (configurable)			ms	0 - 1.5 - 4 or 12
IEC/EN 61131-2 conformity			Type 1	
Max. input frequency			100 Hz	Counter mode 100 kHz
Length of sensor connection cables			m	30 max.
Isolation	Between channels	V	None	500 --- between groups of 2 channels
	Between channels and internal logic	V	500 ---	

Output characteristics				
Type of compact base ---			TM238 LDD24DT, TM238 LFDC24DT	
Type of output			Fast solid state outputs (Q0 to Q3)	Solid state outputs (Q4 to Q9)
Number of output channels			4	6
Output power supply	Nominal value	V	24 ---	
	Limit values	V	19.2...30 --- (including ripple)	
Output current	Minimum	mA	PWM mode	PTO mode
	Maximum	mA	Normal mode	
Max. frequency			20 kHz	100 kHz
Accuracy	Cyclic ratio 20...80%	%FS	1	–
	Accuracy		–	1%
Output logic			Source (positive)/Sink (negative)	Source (positive)
Commons			1	2
Response time			ms	–
Leakage current			mA	< 2
Voltage drop			V	< 2
Tungsten filament lamp max. power			W	< 3
Protection	Against short-circuits		Yes, against short-circuits at the 0 V 	Yes
	Against overloads		Yes	
	Against overvoltages		Yes	
Length of connection cables			m	10 max. with shielded cable
Isolation	Between channels	V	500 ---	30 max.
	Between channels and internal logic	V	500 ---	30 max.

 Never connect a positive polarity to fast outputs (see page 15).

Designation	Use	Length	Reference	Weight kg
USB/RS 485 converter	Used to connect the RS 485 port (SL1) to the USB port on the PC to update the controller operating system. Requires Modbus cable VW3 A8 306 R●● for the PC end connection at the controller end	0.4 m (integrated cable at)	TSX CUSB 485	0.144

### Replacement parts

Designation	Use	Reference	Weight kg
Removable screw connectors, supplied with Modicon M238 compact bases	Set of 5 removable screw connectors for discrete I/O One 5-way connector with line terminator for CANopen link	TM238 RSSCT TM238 CNTLSCT	0.055 0.010

(1) For later versions, use the USB port and cable.

### Dimensions, mounting

#### TM238 LDD24DT, TM238 LFDC24DT, TM238 LDA24DR and TM238 LFAC24DR

### Mounting

#### On $\perp$ rail (1)

On panel, attached with two M4 screws x 6/8 mm

(1) Use of 35 x 15 mm  $\perp$  rail recommended to ensure vibration resistance (see page 5).

### Installation rules

#### ⚠ Important:

- Vertical mounting: Possible with extension modules facing up.
- Flat mounting: Not possible.
- Avoid placing heat-generating equipment (transformers, power supplies, power contactor, etc.) below the controller.

### Connections (continued)

#### Connection of 24 V $\bar{\square}$ fast inputs

##### Using 2 incremental encoders with phase-shifted signals without TDC

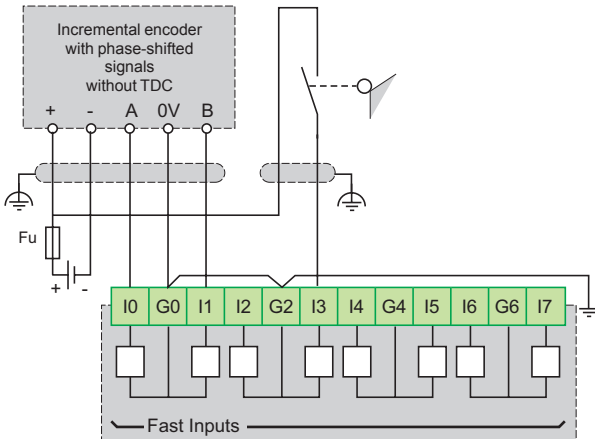

##### Using 2 incremental encoders with phase-shifted signals with TDC

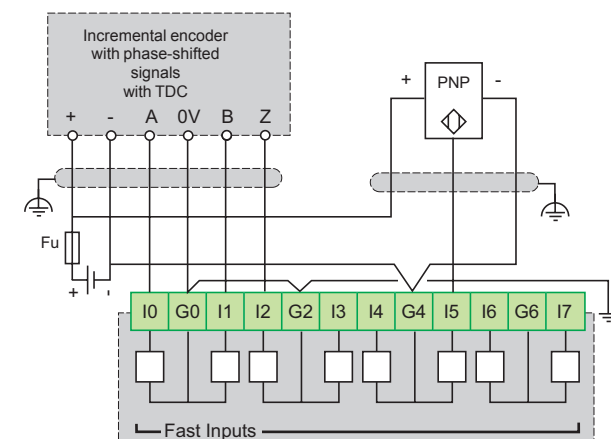

Note: It is possible to use the available fast inputs I2, I3, I6, and I7 as "normal mode" inputs: 30 m unshielded cables max. and separate 24 V  $\bar{\square}$  power supply from the specific auxiliary power supply for the fast inputs.

##### Using 1 incremental encoder with phase-shifted signals without TDC and 1 electromechanical sensor

##### Using 1 incremental encoder with phase-shifted signals with TDC and one 3-wire PNP sensor

Cordsets with mandatory shielding: 10 m max. and shielding to be connected to the metal support for mounting the Modicon M238 controller.

Specific auxiliary power supply for the encoders and sensors connected to the fast inputs and used in "fast counter" mode.

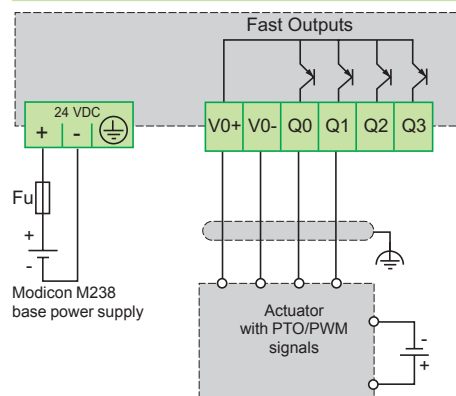

0.5 A fast-blow fuse.

#### Connection of 24 V $\bar{\square}$ fast outputs (TM238 LDD24DT, TM238 LFC24DT)

##### Using actuators with USIC type PTO/PWM signals

##### Using actuators with PTO/PWM signals delivering a 24 V $\bar{\square}$ power supply

Cordsets with mandatory shielding: 10 m max. and shielding to be connected to the metal support for mounting the Modicon M238 controller.

#### Principle

In order to protect against external interference, cables and cordsets carrying the signals below must be shielded:

- Incremental encoders and sensors connected to the fast inputs and used in counter mode (> 100 Hz)
- Actuators with PTO/PWM signals connected to the fast outputs for **TM238 LDD24DT** and **TM238 LFCD24DT**
- Sensors and actuators connected to the extension modules' analog I/O
- Serial links and CANopen buses

The use of shielded cables requires compliance with the following wiring rules:

- Shielding 360° connected to earth at both ends of the cables. Metal conduit or ducting can be used for part of the shielding length provided that there is no break in the continuity of the earth connections.
- Keep cables carrying signals of different categories as far apart as possible.

#### Installation diagram for Modicon M238 controller

- 1 Metal plate or metal panel (earthed casing) connected to the device's protective earth (PE)
- 2 Modicon M238 logic controller
- 3 **Shielding connection clamp TM200 RSRCEMC**: Attach and earth the shielding of cables 4 and 8 as close as possible to the controller base:
  - Strip the shielding (on the clamp)
  - Attach the cable to the metal support 1 by attaching the clamp to the stripped part of the shielding.
- 4 The shielding must be clamped tightly enough to the metal support to ensure good contact.
- 4 Shielded cables for connecting the fast outputs to the actuators with PTO/PWM signals
- 5 Shielded cordset for connecting serial links SL1 and SL2 (**TCS MCN 3M4●●●2** cordsets include the earthing lug).  
Use "**TM200 RSRCEMC** shielding connection clamp" in the serial lines cable 5
- 6 Shielded cable for connecting the CANopen bus. The shielding is connected to terminal 3 on the connection terminal block (see page 11).  
Use "**TM200 RSRCEMC** shielding connection clamp" in the CANopen cable 6
- 7 Unshielded power supply wires or cable (2 conductors + Earth)
- 8 Shielded cable for connecting the encoder and sensor signals used on the fast inputs in counter mode

**Note:** The shielding of the shielded cables used for connecting the sensors/actuators to the analog I/O extension modules should be attached and earthed via earthing plate **TM2 XMTGB** (see page 40).

**Note:** These shielding connections do not remove the need to connect the PE protective conductors (green-yellow) to the appropriate terminals on each unit or product.

### Presentation

The offer discrete I/O extension modules includes input modules, output modules and mixed input/output modules. With the 15 I/O modules offered, in addition to the I/O integrated in 24 I/O compact base controllers and modular base controllers, configurations can be adapted to best suit application requirements, so optimising costs.

The following discrete I/O modules are available:

- Four  $\overline{\text{DC}}$  24 V discrete input modules comprising an 8, 16 and a 32-channel module, equipped with either removable screw terminal blocks or HE 10 connector, depending on the model. These modules can be either “sink or source” .
- One  $\sim$  120 V discrete input module, 8 channels, equipped with a removable screw terminal block.
- Eight discrete output modules comprising two output modules with 8 and 16 relay outputs, output modules with 8, 16 or 32-channel “sink” or “source” transistor outputs, equipped with either removable screw terminal blocks or HE 10 connector, depending on the model.
- Two mixed discrete input and output modules, comprising one 4-channel input/4-channel relay output module with removable screw terminal block and one 16-channel input/8-channel relay output module with non-removable spring terminal block.

The narrow width of these I/O modules (17.5 mm, 23.5 mm, 29.7 mm or 39.1 mm) makes it possible to build Modicon M238, Twido or Modicon OTB configurations of up to 248 I/O with a minimal overall size of L 364.9 mm x H 90 mm x D 81.3 mm.

Discrete I/O extension modules and the analogue I/O modules are connected to the different base controller according to the following rules:

- Modicon M238 24 I/O compact base controllers, **TM238 L●●●●●●** : 7 modules max.
- Twido 24 E/S compact base controllers, **TWD LC●A 24DRF**: 4 modules max.
- Twido 40 E/S compact base controllers, **TWD LC●● 40DRF**: 7 modules max.
- Twido 20 E/S modular base controllers, **TWD LMDA 20D●K**: 4 modules max.

- Magelis HMI Controller, **XBT GC2●●0●**: 3 modules max
- Modicon OTB Interface 20 E/S, **OTB 1●0 DM9LP**: 7 modules max.

All the discrete I/O modules are electrically isolated with the use of a photocoupler between the internal electronic circuit and the input/output channels.

### Description

Discrete I/O extension modules comprise:

- 1 An extension connector for electrical connection to the previous module (1).
- 2 One or two blocks for displaying the channels and module diagnostics.
- 3 One or two connection components of varying type, depending on the model:
  - removable screw terminal block (1 or 2) for modules whose reference ends in **T**,
  - HE 10 connector (1 or 2) for modules whose reference ends in **K**,
  - non-removable spring terminal block for module **TM2 DMM 24DRF**.
- 4 Latching mechanism for attachment to the previous module.

These modules are mounted on a symmetrical  $\perp$  rail. Fixing kit **TWD XMT 5** (supplied in lots of 5) allows plate or panel mounting. For modules with removable screw terminal block, the terminal blocks are supplied with the module.

The **OTB 9ZZ 61JP** supply common distribution module (2 isolated groups of 10 terminals) simplifies the wiring of supply commons of sensors or actuators via 2 removable screw terminal blocks.

(1) A connector on the right-hand side ensures continuity of the electrical link with the next I/O module.

Characteristics of $\bar{0}$ input channels										
Type of modules	TM2	DAI 8DT	DDI 8DT	DDI 16DT	DDI 16DK	DDI 32DK	DMM 8DRT	DMM 24DRF

### Presentation

Analog I/O extension modules enable the acquisition of various analog values encountered in industrial applications.

Analog output modules are used to control the preactuators in devices such as variable speed drives, valves and applications that require process control. The output current or voltage is proportional to the numerical value defined by the user program. When the controller stops, the outputs can be configured with fallback (reset to the lowest scale value or hold the last value received). This function, when set to 'hold', is useful when debugging the application or when a fault occurs, to ensure that the process being controlled is not disturbed.

The following 10 analog I/O modules are available:

- One module with 2 inputs: 0...10 V, 4...20 mA
- One module with 2 inputs for type J, K and T thermocouples
- One module with 4 inputs: 0...10 V, 0...20 mA, Pt 100/1000 range - 200...600°C, Ni100/1000 range - 50...150°C
- Two modules with 8 temperature probe inputs: Pt100 range - 200...600°C and Pt1000 range - 50...200°C (with RJ11 connectors or removable screw terminal block)
- One module with 8 inputs: 0...10 V, 0...20 mA
- One module with 8 inputs: PTC/NTC (1)
- One module with 1 output: 0...10 V, 4...20 mA
- One module with 2 outputs: ± 10 V
- One mixed module with 2 inputs (0...10 V, 4...20 mA) and 1 output (0...10 V, 4...20 mA)
- One mixed module with 2 thermocouple (type J, K and T) or temperature probe inputs and 1 output 0...10 V, 4...20 mA
- One mixed module with 4 inputs (0...10 V, 4...20 mA) and 2 outputs (0...10 V, 4...20 mA)

Analog extension modules offer a resolution of 10 bits, 11 bits + sign and 12 bits, with connection by removable screw terminal block. An external 24 V  $\bar{\text{---}}$  power supply is required for each analog module.

Discrete I/O extension modules and analog I/O modules are connected to the different base controllers according to the following rules:

- Modicon M238 24 I/O compact base controllers, **TM238 L●●●●●●**: 7 modules max.
- Twido 24 I/O compact base controllers, **TWD LC●A 24DRF**: 4 modules max.
- Twido 40 I/O compact base controllers, **TWD LC●● 40DRF**: 7 modules max.
- Twido 20 I/O modular base controllers, **TWD LMDA 20D●K**: 4 modules max.
- Twido 20 I/O and 40 I/O modular base controllers, **TWD LMDA 20DRT/40D●K**: 7 modules max.
- Magelis HMI Controller, **XBT GC1100●**: 2 modules max.
- Magelis HMI Controller, **XBT GC2●●0●**: 3 modules max.
- Modicon OTB Interface 20 I/O, **OTB 1●0 DM9LP**: 7 modules max.

All analog I/O modules are electrically isolated with the use of a photocoupler between the internal electronic circuit and the input/output channels.

### Description

Analog I/O modules comprise:

- 1 An extension connector for electrical connection to the adjacent module (2)
  - 2 A PWR display block
  - 3 One (or two, depending on model) removable screw terminal block(s) for connecting the 24 V  $\bar{\text{---}}$  external power supply, the sensors and the preactuators
  - 4 A latching mechanism for attachment to the adjacent module
- For modules with 8 temperature probe inputs:
- 5 8 RJ11 connectors. A version of this module is available with 2 removable screw terminal blocks (2 x 13 terminals)
  - 6 A screw terminal for connecting the functional ground (FG)
  - 7 A removable screw terminal block for connecting the 24 V  $\bar{\text{---}}$  power supply

The **TM2 XMTGB** ground connection plate 8 simplifies connection of the analog sensor and actuator cable shielding. This shielding must be connected to the device's functional ground (FG).

These modules are mounted on a symmetrical  $\perp$  rail. Mounting kit **TWD XMT 5** (supplied in lots of 5) can be used for plate or panel mounting.

(1) With PTC probe, threshold detection inputs (high and low).

(2) A connector on the right-hand side panel ensures continuity of the electrical link with the adjacent I/O module.

**Characteristics of 2 and 4-channel analog input modules**

Module type		TM2 AMI 2HT		TM2 AMI 2LT		TM2 AMI 4LT	
<b>Number of channels</b>		2 high-level inputs		2 low-level inputs		4 inputs	
<b>Range</b>		Voltage	Current	Thermocouple		Voltage	Current Temperature probe

#### Connections for ensuring conformity to EMC standards

##### Principle

In order to protect against external interference, cables and cordsets carrying the signals below must be shielded:

- Extension modules:
  - Sensors and actuators connected to **TM2 AMI/ARI** and **TM2 A●O/A●M** analog I/O
  - Sensors connected to **TM200 HSC206D●** high-speed counter inputs
- Modicon M238 controller base:
  - Incremental encoders and sensors connected to the high-speed inputs and used in counter mode (> 100 Hz)
  - Actuators with PTO/PWM signals connected to the high-speed outputs
  - Serial links and CANopen buses

The use of shielded cables requires compliance with the following wiring rules:

- Shielding earthed at both ends of the cables. Metal conduit or ducting can be used for part of the shielding length, provided there is no break in the continuity of the ground connections.
- Wherever possible, keep cables carrying signals of different categories separate.

##### Installation diagram for Modicon M238 controller

- 1 Metal plate connected to the device's protective earth (PE)
- 2 Modicon M238 logic controller
- 3 Analog or high-speed counter extension modules
- 4 Shielded cables for connecting the high-speed inputs **4a** and high-speed outputs **4b** to the actuators with PTO/PWM signals
- 5 Shielded cordset for connecting serial links SL1 and SL2. **TCS MCN 3M4●●●2** cordsets include the earthing lug.
- 6 Shielded cable for connecting the CANopen bus. The shielding is connected to terminal 3 on the terminal block (see page 10).
- 7 Unshielded power supply wires or cable; see connection of the  terminal on page 40.
- 8 Shielded cable for connecting the extension module sensors/actuators (analog or high-speed counter)
- 9 Earth connection plate **TM2 XMTGB** for attaching and earthing the shielding of the cables numbered **8** in the diagram (see detail **A**)

##### Connecting the shielding of cables 4a and 4b

Shielding of cables **4a** and **4b** (connection of sensors/actuators to the base) via shielding connection clamp **15** (1):

- Attach and ground the shielding of the cables **4** as close as possible to the controller base.
- Strip the shielding (at the clamp **15**).
- Attach the cable to the metal support **1** by tightening the clamp onto the stripped part of the shielding.

The shielding must be clamped tightly enough to the metal support to ensure good contact.

##### Connecting the shielding of cables 8

The shielding for cables **8** (connection of the extension modules' sensors/actuators) must be attached to the ground connection plate **TM2 XMTGB** (see detail **A** opposite)

##### Connecting the functional ground terminals

The functional ground terminals (FG) of the:

- 24 V  $\overline{\text{---}}$  power supply of the Modicon M238 controller base
- Analog I/O or high-speed counter extension modules (see detail **A**)

##### Installing the ground connection plate TM2 XMTGB

- **8, 9, 10, 11** and **12**: The shielding on cable **8** is stripped at the male Faston connector **10** for a length of 15 mm **11**, then tightly clamped on it using the Rilsan clamp **12** (width 2.5...3 mm).
- **13** and **14**: Functional ground terminal (FG). Each earth terminal on the extension modules (analog and counter) must be connected to the **TM2 XMTGB** plate **9** via an earth braid **13** (2) (width **W** 2...5 mm, thickness **W/5**) and using a 6.35 mm Faston connector **14**.

Detail A: Ground connection plate TM2 XMTGB

**Note:** These shielding connections do not remove the need to connect the PE protective conductors (green-yellow) to the appropriate terminals on each unit or product.

(1) The shielding of cables **4a** and **4b** can be attached to plate **TM2 XMTGB**, in the same way as cable **8**.

(2) Earth braid supplied with **TM2 ARI 8LT/LRJ** analog modules and **TM200 HSC206D●** counter module.

### Presentation

**TM200 HSC 206DT/DF** counter modules for the Modicon M238 logic controller are used to count the pulses generated by a sensor or to process the signals from an incremental encoder.

The two modules, both with two 60 KHz counter channels, differ in the way they are connected:

- Removable screw terminal block (2 x 16 contacts): **TM200 HSC 206DT**
- Removable spring terminals **TM200 HSC 206DF**

Counter modules	No. of channels	Maximum frequency	Integrated functions	Physical I/O per channel	
				Inputs	Outputs
<b>TM200 HSC 206DT</b> <b>TM200 HSC 206DF</b> (3 modules max. per TM238 base)	2	60 KHz	Upcounting Downcounting Period meter Frequency meter Frequency generator Axis following with encoder	6	2

The sensors used on each channel can be:

- 2-wire 24 V proximity sensors,
- 3-wire PNP 24 V proximity sensors,
- Limit switches (N/O or N/C contact),
- 15/30 V output signal incremental encoders and source outputs (positive logic).

**TM200 HSC 206D●** counter modules meet the requirements of such applications as:

- Alarm generation on empty unwinder status using the ratio,
- Sorting small parts using the period meter,
- Single electronic cam using the dynamic setting thresholds,
- Speed control using the period meter,
- Grouping/ungrouping for packaging machines,
- Event counting,
- Flow or speed measurement.

**TM200 HSC 206D●** counter modules are considered to be extension modules and as such are connected to the Modicon 238 base by stacking them on a  $\perp$  rail starting at the right-hand side panel of the base (7 extension modules are permitted in total, a maximum of 3 of which can be **TM200 HSC 206D●** counter modules).

The function parameters are set by configuration using SoMachine software.

### Description

TM200 HSC 206D 60 KHz counter modules comprise:

- 1 An extension connector for linking with the adjacent module (1).
- 2 A channel and module diagnostics display block.
- 3 2 removable screw or spring terminal blocks marked TB0 and TB1 for connecting the sensors and preactuators.
- 4 A mechanical device for locking to the adjacent module.
- 5 A screw terminal for the functional ground (FG) connection.

The **TM2 XMTGB** ground connection plate **6** simplifies connection of the sensor and encoder cable shielding. This shielding must be connected to the device's functional ground.

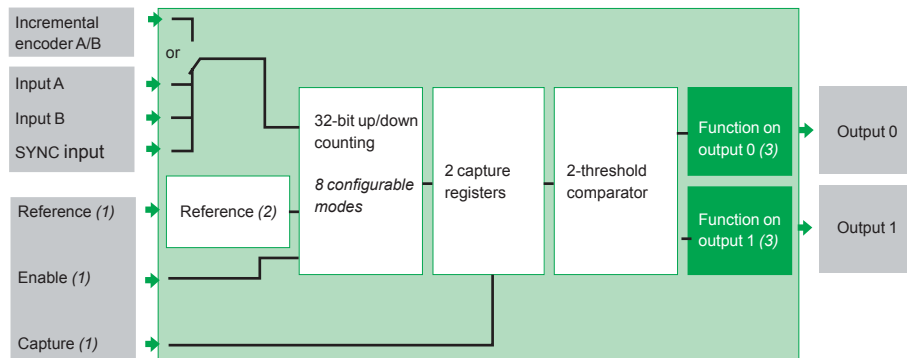

These modules are mounted as standard on a symmetrical  $\perp$  rail. The **TWD XMT 5** mounting kit (supplied in lots of 5) can be used for plate or panel mounting.

(1) A connector on the right-hand side panel ensures continuity of the link with the adjacent I/O module.

### Operation

#### Block diagram of a TM200 HSC 206DT/DF module counter channel

(1) Optional inputs.

(2) Reference: 4 operating modes for "IN\_SYNC" SYNC and "IN\_REF" Reference inputs.

(3) Function on outputs: 11 possible types of behaviour.

### Functional characteristics of TM200 HSC 206DT/DF modules

<b>8 configurable modes</b>	Frequency meter	<p>This mode measures a frequency, speed, data rate or an event stream. As standard, this mode measures the frequency received on the IN_A input. This frequency is always expressed in Hz (number of pulses/second), with a precision of 1 Hz.</p> <p>The maximum frequency on the IN_A input is 60 kHz. The maximum cyclic ratio at 60 kHz is 60%.</p>
	Event counting	<p>This mode is used to determine the number of events received. In this mode, the counter calculates the number of pulses applied to the IN_A input at time intervals defined by the user.</p> <p>The module counts the pulses applied to the IN_A input each time the pulse for this input lasts longer than 5 μs (without anti-bounce filter).</p>
	Period measurement	<p>This mode is used to:</p> <ul style="list-style-type: none"> <li>■ Determine the duration of an event</li> <li>■ Determine the time between 2 events</li> <li>■ Time and measure the execution time of a process</li> </ul> <p>It measures the time elapsed during an event or between 2 events (IN_A input) according to a selectable time base of 1 μs, 100 μs or 1 ms. The IN_SYNC input can be used to enable or stop a measurement. The module can carry out a maximum of 1 measurement every 5 ms. The shortest measurable pulse is 100 μs, even if the unit defined by the user is 1 μs. The maximum measurable duration is 4,294,967,295 units (unit to be defined).</p>
	Ratio counting	<p>Ratio counting mode only uses the IN_A and IN_B inputs. There are 2 possible modes:</p> <ul style="list-style-type: none"> <li>■ Ratio 1: Used to divide 2 frequencies. This is intended for applications such as flowmeters, mixers, etc.</li> <li>■ Ratio 2: Used to subtract 2 frequencies. This is intended for the same applications, but for those requiring more precise regulation (more similar frequencies).</li> </ul> <p>Ratio 1 mode gives the results in thousandths for better accuracy (a display of 2000 corresponds to a value of 2) and ratio 2 mode gives the results in Hz.</p> <p>The maximum frequency that the module can measure on the IN_A and IN_B inputs is 60 kHz.</p>
	Downcounting	<p>This mode is used to list a group of operations. In this mode, activating the synchronization function starts the counter which, starting from a user-defined preset value, decreases with each pulse applied to the IN_A input, until it reaches 0. This downcounting is made possible when the enable function has been activated. The counting register is thus updated at 1 ms intervals.</p> <p>One basic use of this mode is to signal, using an output, the end of a group of operations (when the counter reaches 0).</p> <p>The shortest pulse applied to the IN_SYNC input is 100 μs. The maximum frequency applied to the IN_SYNC input is 1 pulse every 5 ms. The maximum user-defined preset value is 4,294,967,295. The maximum count value is 4,294,967,295 units.</p>
	Loop (modulo) counting	<p>This mode is used in packaging and labelling applications where actions are repeated on sets of moving objects.</p> <ul style="list-style-type: none"> <li>■ In upcounting, the counter increases until it reaches the user-defined “modulo - 1” value. On the next pulse, the counter is reset to 0 and counting restarts.</li> <li>■ In downcounting, the counter decreases until it reaches 0. On the next pulse, the counter is reset to the user-defined “modulo - 1” value. Downcounting can then restart.</li> </ul> <p>The maximum frequency applied to the IN_A and IN_B inputs is 60 kHz. The maximum frequency of the modulo event is 1 event every 5 ms. The maximum modulo value is 4,294,967,296 (possible by declaring 0 in the modulo setting value).</p>
	32-bit counter counting	<p>This mode is mainly used in axis following.</p> <p>The maximum frequency applied simultaneously to the IN_A and IN_B inputs is 60 kHz. The maximum frequency of the referencing event is 1 event every 5 ms. The counter value is between - 2,147,483,648 and + 2,147,483,647.</p>

## Presentation

AS-Interface master module **TWD NOI 10M3** allows the M238 compact logic controller (version  $\geq 2.0$ ) to perform the function of AS-Interface master.

The AS-Interface consists of a master station (M238 compact logic controller) and slave stations. The master, which supports the AS-Interface profile, polls each of the devices connected to the AS-Interface, in turn, and stores information gathered (sensor/actuator status, operating status of the devices) in the controller memory. Communication on the AS-Interface is managed in a way that is totally transparent to the M238 logic controller application program.

The **TWD NOI 10M3** master module manages the following with the AS-Interface M3 profile:

- discrete slave modules (maximum of 62 slaves arranged in 2 banks, A and B, of 31 addresses each),
- analogue slaves (maximum of 7 slaves in bank A).

The AS-Interface M3 profile supports analogue profile 7.3 (7 slaves), but does not support analogue profile S-7.4.

The maximum number of **TWD NOI 10M3** modules per M238 compact logic controller is 2.

An AS-Interface power supply is essential to supply the various modules on AS-Interface. It should preferably be located close to the stations with high power consumption.

## Description

Module **TWD NOI 10M3** takes the form of a standard-size module. It is connected to an M238 compact logic controller in the same way as any I/O module.

It has the following on the front panel:

- 1 A display block comprising:
  - 6 pilot lights indicating the module operating modes:
    - green PWR pilot light: module powered up,
    - red FLT pilot light: error in the configuration loaded,
    - green LMO pilot light: module in local mode,
    - green CMO pilot light: module in connected mode,
    - red CNF pilot light: not used,
    - red OFF pilot light: module in protected, unconnected mode.
  - 6 green pilot lights, 3 for inputs, 3 for outputs.
- 2 A block for displaying the status of the addresses.
- 3 Two pushbuttons PB1 and PB2 for controlling the status of the slaves by selecting their address and changing the mode.
- 4 An extension connector for electrical connection to the previous module.
- 5 A connector (on the RH side) for I/O extension modules **TM2 D●I** ou **TM2 D●O**.
- 6 A latching mechanism for attachment to the previous module.
- 7 An AS-Interface yellow cable removable screw terminal block.

Extension module **TWD NOI 10M3** can be mounted as standard on symmetrical rail. Fixing kit **TWD XMT5** (sold in lots of 5) allows plate or panel mounting.

## Diagnostics

The 30 pilot lights on the front panel of the module are used in conjunction with the two pushbuttons for diagnostics by the Twido controller. The display block on the front panel of master module **TWD NOI 10M3** allows simplified local diagnostics to be performed by displaying the slaves present on the AS-Interface.

### Software set-up

AS-Interface is configured using SoMachine (1) software. The services offered are based on the principle of simplicity:

- Management of profile tables, parameters and data by the master, in a way that is transparent to the user.
- Topological addressing of I/O: each AS-Interface slave defined has a topological address assigned to it, in a way that is transparent to the user.

Each AS-Interface sensor/actuator is seen by the M238 compact logic controller in the same way as any "In-rack" I/O.

## Characteristics

Module type		TWD NOI 10M3	
AS-Interface profile		AS-Interface M3, V 2.11 (profile S-7.4 not supported)	
Type of addressing		Standard and extended

## Presentation

Example of Modicon OTB islands on CANopen bus

There is an increasing tendency for machine manufacturers to design their automation systems using modular architectures. The use of distributed inputs/outputs (I/Os) is becoming more and more common. The Modicon OTB offer is an ideal solution for “optimised” type distributed input/output requirements. This offer, complementing the Modicon interface family, has been designed to provide the right technical-economical balance: it meets the needs of machine manufacturers and users seeking the best compromise between size, ease of cabling, setting-up and costs. Open and modular, the Modicon OTB solution enables the creation of industrial I/O islands managed by a master controller (PLC, PC or variable speed drive) via a fieldbus or communication network.

With its expandable block type architecture, the Modicon OTB solution adapts to all configurations of automation system islands. The Modicon OTB offer is particularly economical for small and medium size islands. In addition, the optimised sizes of this offer are ideally suited to the size of enclosures for distributed I/Os, that are located as near to the machine as possible. This solution reduces cabling time and costs and at the same time takes into account the modular architecture of the machine.

Furthermore, the Modicon OTB offer proposes fewer references relating to spare parts and accessories that are required for creating an island.

The Modicon OTB offer has also been designed to be as simple as possible. This offer includes 2 communication bases (interface modules) for the various types of fieldbus:

- CANopen bus,
- Modbus RS 485 Serial Line.

Inputs and outputs are directly integrated in the interface modules. Each base incorporates 20 I/O:

- 12  $\pm$  24 V inputs,
- 6 relay outputs,
- 2  $\pm$  24 V solid-state outputs.

All the bases use a  $\pm$  24 V supply. Of monobloc design, each Modicon OTB interface module can be fitted with extension modules of Modicon M238 logic controller.

With its range of I/O extensions, the Modicon OTB offer provides a modularity that allows all requirements to be met, commencing with a base that can be fitted with up to 7 discrete I/O modules **TM2 D●●** or analogue I/O modules **TM2 A●●**. The extension modules, like the interface modules, simply clip-on to 35 mm symmetrical rail and enable configurations of up to 244 discrete I/O and up to 42 analogue I/O channels, or a mixture of both types (within the limit of 7 extension modules), to be obtained.

Sensors and actuators are connected to the interface modules and I/O extension modules using removable screw terminal blocks. All Modicon OTB modules provide an IP 20 degree of protection.

To simplify sensor and actuator connections, as well as linking commons, the Modicon OTB offer also includes a commoning module **OTB 9ZZ 61JP**. This module, as with all the other modules of the Modicon OTB range, allows the through connection of the internal bus or network (passively in this case) and enables connection of the commons in two isolated groups for each commoning module

## Configuration of interface modules

## Description

The Modicon **OTB 100 DM9LP** (1) interface modules comprise:

- 1 An access door.
- 2 Indicator lights:
  - module and communication status (PWR, RUN, ERR, COM, STAT)
  - I/O states (IN● and OUT●)
- 3 A connector for expansion modules (right-hand side).
- 4 Two removable screw terminal connectors for connection of inputs/outputs.
- 5 or 6 Depends on model:
  - 5 A SUB-D 15-way connector for connection CANopen bus with **OTB 100 DM9LP** model.
  - 6 Two RJ45 connectors for connection Modbus serial link with **OTB 150 DM9LP** model.
- 7 Terminal for connection of  $\approx$  24 V supply.
- 8 One RJ45 connector for operating system update of interface.

### Via access door 1

- 9 Two or three coding wheels (depending on model) for OTB island address and communication data rate adjustment.

**Mounting:** the interface modules is mounted on 35 mm symmetrical  $\perp$  rail. Fixing kit **TWD XMT5** (supplied in lots of 5) allows plate or panel mounting.

(1) Only the communication part 5, 6 and 9 is dedicated to each model and can differ, the general description remains the same.

	Conformity to standards	CEI/EN 61131-2, UL 508, CSA 22.2 No. 213 (Class 1, Division 2, Groups A, B, C, D), CÉ																																																

(1) For other limitations, consult our catalogue "Machines & installations with industrial communications".

(2) With using the **TSX CAN C●50/100/300** CANopen cables and the **TSX CAN C●DD03/1/3/5** preformed cordsets.

(3) For isolated link, tap isolation **TWD XCA ISO** must be used.

**Inputs/outputs characteristics**

**24 V  $\overline{\text{DC}}$  inputs**

Number of input channels			12, type 1 (according IEC/EN 61131)
Nominal input voltage		$\overline{\text{DC}}$ V	24 sink/source (positive or negative logic, PNP or NPN)
Common			1
Input voltage limits		$\overline{\text{DC}}$ V	20.4...26.4
Nominal input current		mA	4.5 for I0, I1, I6 and I7; 7 for I2...I5 and I8...I11
Input impedance		k $\Omega$	5.3 for I0, I1, I6 and I7; 3,4 for I2...I5 and I8...I11
Electronic filtering time	At state 1	$\mu\text{s}$	35 for I0, I1, I6 and I7; 40 for I2...I5 and I8...I11
	At state 0	$\mu\text{s}$	45 for I0, I1, I6 and I7; 150 for I2...I5 and I8...I11s
Configurable filtering time		ms	- Electronic filtering time - 3 ms ou 12 ms depending on configuration
Isolation	Between channels		None
	Between channels and internal logic	V eff	$\sim$ 500 for 1 min

**Transistor output**

Number of output channels			2 (Q0 and Q1)
Output logic			Source (positive logic, PNP)
Common			1
Nominal output values	Voltage	$\overline{\text{DC}}$ V	24
	Current	A	0,3
Output value limits	Voltage	$\overline{\text{DC}}$ V	20.4...28,8
	Current per channel	A	0.36
	Current per common	A	0.72
Response time	At state 1	$\mu\text{s}$	5
	At state 0	$\mu\text{s}$	5
Voltage drop	At state 1	$\overline{\text{DC}}$ V	Max.1
Maximum inrush current		A	1
Leakage current		mA	0.1
Induction L/R		ms	10 (28.8 V $\overline{\text{DC}}$ , 1 Hz)
Overvoltage protection		$\overline{\text{DC}}$ V	39 $\pm$ 1
Maximum power (filament lamp)		W	8
Isolation	Between channels		Aucun
	Between channels and internal logic	$\sim$ V	$\sim$ 500 for 1 min

**Relay outputs**

Number of output channels			6 (Q2...Q7)
Commons	Common 1		3 contacts (relay) NO (Q2, Q3 and Q4)
	Common 2		2 contacts (relay) NO (Q5 and Q6)
	Common 3		1 contact (relay) NO (Q7)
Nominal output values (1) (resistive or inductive load)	Voltage	$\overline{\text{DC}}$ V	30
		$\sim$ V	240
	Current per channel	A	2
Response time	At state 1	ms	5
	At state 0	ms	2
Bounce time		ms	$\leq$ 1
Min. switchable load		mA	0.1 / $\overline{\text{DC}}$ 0,1 V (reference value)
Contact resistance (unused condition)		m $\Omega$	Max. 30
Isolation voltage		V rms	$\sim$ 500 for 1 min
Consumptions for all the outputs	At state 1	$\overline{\text{DC}}$ 5 V	mA 30
		$\overline{\text{DC}}$ 24 V	mA 40
	At state 0	$\overline{\text{DC}}$ 5 V	mA 5
Electrical durability	In AC-1		5 x 10 <sup>5</sup> operating cycles with 500 VA load
	In AC-14		5 x 10 <sup>5</sup> operating cycles with 250 VA load
	In AC-15		5 x 10 <sup>5</sup> operating cycles with 200 VA load
	In DC-1		5 x 10 <sup>5</sup> operating cycles with 60 W load
	In DC-13		5 x 10 <sup>5</sup> operating cycles with 30 W load

**Commoning block characteristics**

Type de module			<b>OTB 9ZZ 61JP</b>
Application			Passive, inter-module
Commons			2 groups of 10 removable terminals
Nominal output values	Voltage	V	$\overline{\text{DC}}$ 19...30 / $\sim$ 215...240
	Currents	Per channels	A 2
		Per group of commons	A 8

(1) With 1800 operations max./hour;  
 electric life: min. 100 000 operations, mechanical life: min. 20 x 10<sup>6</sup> operations.

### Presentation

TwidoPort module **499 TWD 01100** is an Ethernet interface that is easy to use and dedicated to Modicon M238 logic controllers and Twido compact or modular programmable controllers. It allows incorporation of this controllers into an Ethernet network as a passive device (slave). The TwidoPort module is ready for use. When connected to the integrated RS 485 serial port acts as a gateway between the Ethernet network and the controller's Modbus serial link port.

The main characteristics of the TwidoPort module are as follows:

- Connects to the RS 485 of the Modicon M238 controller (marked SL1 or SL2 depending on model) or the RS 485 port of the Twido controller; no external auxiliary supply is necessary.
- Ethernet configuration:
  - takes the Ethernet configuration from the Twido application configuration (normal mode),
  - supports manual configuration using Telnet.
- Provides Ethernet statistics via a Telnet session.

### Description

The TwidoPort **499 TWD 01100** interface module comprises:

- 1 Five pilot lights indicating the status of the interface and of the TwidoPort module links.
- 2 An RJ45 type connector for connection of the power supply and of the link to the controller's integrated RS 485 port. This connection is made using connection cable **TWD XCA RJP03P** supplied with the TwidoPort interface module in case of the Twido controller.
- 3 An RJ45 connector (accessed through the bottom of the module) for connection to the Ethernet TCP/IP network.
- 4 An earthing screw (accessed through the bottom of the module).

The TwidoPort interface module can be mounted as standard on a symmetrical  $\sqcup$  rail. Fixing kit **TWD XMT5** (sold in lots of 5) allows plate or panel mounting (2 x  $\varnothing$  4.3 holes).

#### To order separately

For connecting to the Modicon M238 controller, the cordset for connection Modbus **XBT Z9980** (length 2.5 m).

Characteristics		
<b>TwidoPort module</b>		<b>499 TWD 01100</b>
<b>Services</b>	Class	A10
	Web services	No Web server
	Basic Ethernet Modbus/TCP communication services	Modbus messaging (read/write of data words) BOOTP function Auto MDI/MDX function (avoids the use of crossover cable) Supports manual configuration using Telnet.
<b>Structure</b>	Physical interface	10BASE-T/100BASE-TX, standard RJ45 type connector
	Binary rate	10/100 Mbit/s with automatic recognition
	Medium	Twisted pair
<b>TwidoPort interface module</b>	Operating temperature	0...55 °C
	Relative humidity	10...95 % (without condensation)
	Degree of protection	IP 20
	Max. consumption at --- 5 V	180 mA
	Supply	5 ± 0.5 V provided by the Modicon M238 or Twido base controller
	Conforming to standards	UL 508, CSA 1010, FCC Class A, EN 61131-2, CE
	LED indicator	Activity on the Modbus serial link (SER ACT), controller status (STATUS), Ethernet link status (LINK), binary rate 100 Mbit/s (100 MB), Ethernet network activity (ETH ACT)

**Shielded copper connection cables**

ConneXium shielded copper connection cables are available in two versions to comply with the different standards and approvals in force:

■ **Shielded twisted pair copper cables to standard EIA/TIA 568**

These cables conform to:

- standard EIA/TIA 568, category CAT 5E,
- standard IEC 11801/EN 50173, class D.

Their flame resistance conforms to:

- NFC 32070# classification C2
- standards IEC 322/1,
- Low Smoke Zero Halogen (LSZH).

■ **Shielded twisted pair copper cables, UL and CSA 22.1 approved**

These cables conform to:

- standards UL and CSA 22.1.

Their flame resistance conforms to NFPA 70.

**“Do It Yourself” cable and connectors**

The ConneXium “Do It Yourself” range allows the user to make up Ethernet copper cables on site and to the required length. They are designed for cabling Ethernet 10/100 Mbit/s networks. The maximum length of cables made up in this way is 80 m. They can be assembled quickly using a knife and cutting pliers (no special tools are required).

### Presentation

Schneider Electric has selected CANOpen for its machines and installations because of its wealth of functions and its resulting benefits in the automation world. This decision was based on the general acceptance of CANOpen, and the fact that CANOpen products are increasingly used in control system architectures.

CANOpen is an open network supported by more than 400 companies worldwide, and promoted by CAN in Automation. CANOpen conforms to standards EN 50325-4 and ISO 15745-2.

Schneider Electric is heavily involved in working groups, which are important for machine and installation architectures, systems and products.

### CANOpen brings transparency to Ethernet

The CANOpen bus is a multi-master bus ensuring reliable, deterministic access to real-time data in control system devices. The CSMA/CA protocol is based on broadcast exchanges, sent cyclically or on an event, to ensure optimum use of the passband. A message handling channel can also be used to define slave parameters.

The bus uses a double twisted pair on which, with the Modicon M238 logic controller, 16 slaves devices maximum are connected by daisy-chaining or by tap junctions. The variable data rate between 50 Kbit/s and 1 Mbit/s depends on the length of the bus (between 1,000 m and 20 m). Each end of the bus must be fitted with a line terminator.

The CANOpen bus is a set of profiles on CAN systems, possessing the following characteristics:

- Open bus system
- Data exchanges in real time without overloading the protocol
- Modular design allowing modification of size
- Interconnection and interchangeability of devices
- Standardized configuration of networks
- Access to all device parameters
- Synchronization and circulation of data from cyclic and/or event-controlled processes (short system response time)

The **TM238 LFDC24DT** and **TM238 LFAC24DR** compact bases integrated a CANOpen port (conformity M20 class) perform the role of master on the bus.

### Connectable Schneider Electric devices

The following Schneider Electric devices can be connected to the CANOpen bus:

- Ø 58 mm Osicoder multi-turn absolute encoders **XCC 3510P/3515C S84CB**.
- TeSys U starter-controllers with **LUL C08** communication module.
- TeSys T motor management system with **LTM R●●C●●** controllers.
- Modicon OTB IP 20 Optimum distributed I/O with **OTB 1C0 DM9LP** interface module.
- Modicon FTB/FTM IP 67 I/O splitter boxes **FTB 1CN●●●●●** monobloc.
- Preventa configurable safety controllers **XPS MC16ZC/32ZC**.
- Altivar 312 variable speed drives for asynchronous motors (0.18...15 kW) **ATV 312H ●●●●●**.
- Altivar 61/71 variable speed drives for asynchronous motors (0.75...630 kW) **ATV 61H /71H ●●●●●**.
- Lexium 05/ Lexium 32 servo drives (0,15...7 kW) for BSH/BSM servo motors **LXM 05A●D●●●●●/ LXM 32A●D●●●●●**.
- Integrated training Lexium **ILA1B, ILE1B** and **ILS1B**.

TeSys U starter-controllers with communication module.

Modicon FTB

Altivar 312

Lexium ILA1B

### Presentation

**TM238 LFDC24DT** and **TM238 LFAC24DR** logic controllers allow to act as CANopen master.  
The bus consists of a master station, the Modicon M238 controller and slave stations. The master is in charge of configuration, exchanges and diagnostics on the slaves.

The CANopen bus is a communication type bus and allows management of various slaves such as:

- Discrete slaves,
- Analogue slaves,
- Variable speed controllers,
- Motor starters,
- ....

The Modicon M238 CANopen master controls up to 16 slaves, each with an input PDO (*Process Data Object*) and an output PDO.  
If a slave has more than one PDO, the maximum number of slaves is reduced by an equivalent number.

### CANopen conformity class

Schneider Electric has defined the conformity classes for CANopen master and slave devices. Conformity classes are used to identify the services and levels of service supported by each CANopen device or product. These services are described in section 4 of our "Machines & Installations with industrial communications" catalogue.

The table below shows product combination possibilities according to their conformity class.

Conformity class		Produit esclave		
		S10	S20	S30
Master product	M10			
	M20			
	M30			

  Combination possible: Modicon M238 controller master M20 classe with slave device S10 and S20 classes

  Use restriction: Modicon M238 controller master M20 class with slave device S30 class limits the level of service to that of the lower conformity class, either S20.

### Characteristics

Type of base		TM238 LFDC24DT, TM238 LFAC24DR							
CANopen port		Standards	DS 301 V4.02, DR 303-1						
		Class	Conformity class M20, limit of 16 slaves						
Data rate	Max. length	m	20	50	100	125	250	500	1000
	Data rate	Kbit/s	1000	800	500	425	250	125	50
No. of slaves		16 max, with max. limit of: 64 TDPOs and 64 RPDOs							
Line matching		Line termination resistor supplied with the screw terminal block, to be mounted when necessary							
Connection		Removable screw terminal block

(1) Forcing the configuration of RS 485 integrated port with TwidoSuite programming protocol parameters.

(2) Carries 5 V voltage (supplied by RS 485 integrated port of Twido controller) for **TWD XCA ISO** tap isolation box (not using the 5 V external power supply).

(3) Allows the using of RS 485 integrated port with the parameters defined in configuration.

(4) If the terminal is equipped with a 25-way SUB-D connector, a SUB-D 25-way female/9-way male adapter **TSX CTC 07** must also be ordered.

SoMachine software platform

### Presentation

SoMachine is the OEM solution software for developing, configuring and commissioning the entire machine in a single software environment, including logic, motion control, HMI and related network automation functions.

SoMachine allows you to program and commission all the elements in Schneider Electric's Flexible and Scalable Control platform, the comprehensive solution-oriented offer for OEMs, which helps you achieve the most optimized control solution for each machine's requirements.

Flexible and Scalable Control platforms include:

**Controllers:**

- HMI controllers:
  - XBT GC,
  - XBT GT/GK CANopen,
- Logic controllers:
  - Modicon M238,
  - Modicon M258,
- Motion Controller
  - Modicon LMC 058,
- Integrated Controller Card:
  - Altivar IMC,

**HMI:**

- HMI Magelis graphic panels:
  - XBT GT,
  - XBT GK.

SoMachine is a professional, efficient, and open software solution integrating Vijeo-Designer.

It integrates also the configuring and commissioning tool for motion control devices. It features all IEC 61131-3 languages, integrated field bus configurators, expert diagnostics and debugging, as well as outstanding capabilities for maintenance and visualisation.

SoMachine integrates tested, validated, documented and supported expert application libraries dedicated to applications in Packaging, Hoisting and Conveying.

SoMachine provides you:

- One software package,
- One project file,
- One cable connection,
- One download operation.

### Visual graphic user interface

Navigation within SoMachine is intuitive and highly visual. Presentation is optimized in such a way that selecting the development stage of the desired project makes the appropriate tools available. The user interface ensures nothing is overlooked, and suggests the tasks to be performed throughout the project development cycle. The workspace has been streamlined, so that only that which is necessary and relevant to the current task is featured, without any superfluous information.

### Learning centre

From the home menu, the learning centre provides several tools to get started with SoMachine. An animated file explains briefly the SoMachine interface and concept. An e-learning allows to run a self-training about SoMachine. A third section gives access to several documented examples of simple coding with SoMachine.

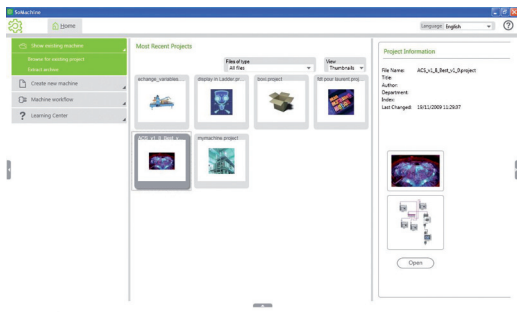

### Projects management

The implemented project management principle allows to browse quickly the existing projects getting the relevant information without the need to open them before selection.

The user can create a new project, starting from several means: using Tested Validated and Documented Architectures, using the provided examples, using an existing project or from scratch. There is quick access to the most recently-used projects.

Software solution

Project management

### Project properties

For each project, the user has the option to define additional information, through friendly forms. It's also possible to attach documents, a customer picture and a configuration picture.

### Configuration

From the graphic user interface, the user can easily build his architecture and configure the devices of this architecture.

### Description of the architecture

A graphic editor can be used to assemble the various elements easily by a simple drag & drop. A devices catalogue is displayed on the left of the screen. It is split into several sections: controllers, HMI, Miscellaneous and search.

### Configuration of the device

Directly from the topologic view of the user interface, a simple click drives the user to the configuration screen of the selected device.

### Programming and debug

Programming is an essential step, and the user has to carefully design it to be as efficient as possible. Advanced control and HMI functions cover all the needs of an OEM engineer in terms of creating the control and visualisation system. Powerful tools allow debug and functional tests such as simulation, step by step execution, break points, trace.

### Commissioning

For an easy and fast diagnostic, the menu commissioning allows the user to check the online state of his architecture. Through the topologic view of the configuration, the devices display if you are logged in or not, as well as if they are in run or stop mode.

### Documentation

Because a printed file of the project is an important element, it is possible to build and customize the project report:

- select the items to be included in the report,
- organize the sections,
- define the page layout
- and then launch the printing.

### Transparency

SoMachine supports Device Type manager (DTM) because it is a field device tool (FDT) container.

With DTM's representing field device in SoMachine, direct communications are possible to every single device via SoMachine, the controller and the field bus CANopen, thus avoiding the lead for individual cable connections.

From the SoMachine unique environment, the remote devices can be set-up off-line and tuned on-line.

### Dedicated OEM application libraries (AFB libraries)

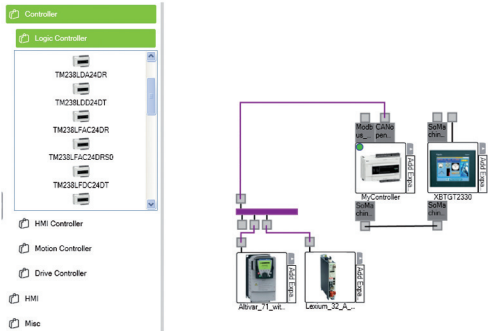

SoMachine can be extended through its solution extension CD. It integrates tested, validated, documented and supported expert application libraries dedicated to many OEM applications. Their simple configuration speeds up design, commissioning, installation and troubleshooting.

These libraries cover the following applications:

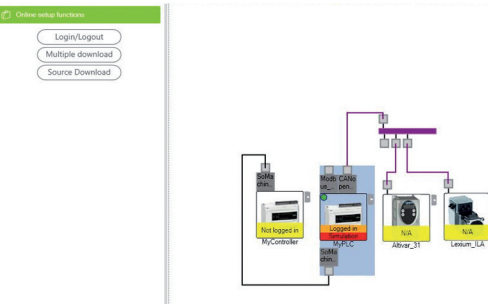

- Packaging,
- Hoisting,
- Conveying.

### Tested Validated Documented Architectures (TVDA)

SoMachine provides a variety of preset projects with ready-to-use architectures you can adapt to individual requirements. Some of them are generic TVDA, they are based on controllers configuration. The solution extension CD brings solutions oriented TVDA's to SoMachine.

### Product offer

SoMachine software is delivered on a DVD, it is a product oriented version that includes all SoMachine features related to generic hardware (M238, M258, XBT GC), as well as generic TVDA

The solution features are added to SoMachine by installing its solution extension CD. It includes all SoMachine solutions hardware, plus all the dedicated application libraries and TVDA.

### References

- SoMachine is available in 6 languages:
  - English
  - French
  - German
  - Italian
  - Spanish
  - Simplified Chinese.
- System Requirements:
  - Processor: Pentium 3 -1.2 GHz or higher
  - RAM Memory: 2 GByte; recommended: 3 GByte
  - Hard Disk: 3.5 GB, recommended: 4 GB
  - OS: Windows XP Professional, Windows Vista 32 Bit
  - Drive: DVD reader
  - Display: 1024 × 786 pixel resolution or higher
  - Peripherals: a Mouse or compatible pointing device
  - Peripherals: USB interface
  - Web Access: Web registration requires Internet access
- The documentation is supplied in electronic format: complete on-line help plus pdf version.

# Modicon M238 logic controller

Connection interfaces

Modicon Telefast ABE 7 pre-wired system

Connection sub-bases for  
discrete I/O extension modules

## Presentation

- 1 Modicon M238 base controller.
- 2 Discrete I/O modules with 20-way HE 10 connectors. The modular sizes available are 16 or 32 I/O.
- 3 Cable (**ABF T20E●●0**) equipped with a 20-way HE 10 connector at each end. This cable is available in 0.5, 1, 2 and 3 m lengths (AWG 28/0.08 mm<sup>2</sup>).
- 4 16 channel sub-base (**ABE 7E16SPN22** or **ABE 7E16SRM20**) for output extension modules.
- 5 16 channel sub-base (**ABE 7E16EPN20** or **ABE 7E16SPN20**) for input or output extension modules.

## Compatibility with I/O extension modules
