[27] Resistive AC load ratings are based on a power factor of 0.85–1.0.

[28] All ratings are based on applying the rated nominal power to the relay coil so as to provide a “clean” make and break that does not result in any contact chatter or multiple actuation of the contacts.

[29] Motor horsepower ratings are based on a power factor of 0.4–0.5, and an initial inrush current not exceeding

[30] The tungsten rating is based on cold-filament inrush current not exceeding 15 times the rated steady-state lamp current.

**Square D™ Miniature Control Relays**

8501R relays are suited for use as logic elements and power switching output devices. The short stroke motion of the armature provides long mechanical life required for high speed operation of control systems. Different contact compositions allow these relays to be used in a variety of applications. Bifurcated crossbar (gold overlay silver) is suitable for high contact reliability and low level switching requirements. Silver alloy is best suited for inductive loads. Class I Division II sealed relays can be used in specified hazardous locations.

### Harmony™ SSL, SSM and SSP

Harmony SSL, SSM and SSP relays do not have any moving parts to wear out. Combined with vibration resistance, arc-less switching and the lack of acoustical noise, solid state relays are the ideal product for switching applications that demand reliable execution. For added reliability, the Harmony SSL, SSM and SSP solid state relays use Direct Copper Bonding (DCB) technology to decrease internal temperatures and improve the overall quality of the product. The SSR solid state relay range comprises:

- Relays for DIN rail mounting: SSRD
- Relays for panel mounting: SSRP

Key features include:

- Input voltage range 3–32 Vdc, 90–280 Vac
- Breaking capacities up to 125 A
- Zero voltage turn on, low EMI/RFI
- No moving parts
- Shock and vibration resistant
- No acoustical noise
- Fast response
- Arc-less switching
- Long life (>10<sup>9</sup> operations typical)

Refer to [Online EZ Selector](#).

### Harmony™ SSP Relays

Harmony SSP solid state relays are three-phase panel mounted relays with IP20 housing. The SCR outputs allow them to be used in various power switching applications. These power relays with 25 A and 50 A current rating are EMC compliant. SSP relays are integrated with an R-C snubber circuit and TVS (Transient Voltage Suppression). They are available with zero voltage switching for resistive load and random switching for inductive load applications.

Refer to [Online EZ Selector](#).

### TeSys™ Deca IEC Style Instantaneous Control Relays

These 600 V relays are approved for use around the world. TeSys Deca relays are usually mounted on 35 mm DIN track, but can also be mounted directly to a panel. The contacts have NEMA A600 and Q600 ratings, in addition to the standard IEC ratings, making them suitable for use in most any control circuit. Low consumption versions are available for use with low level DC control signals from a computer or a PLC. Adder decks can be added to a basic five pole relay to make it up to an 11 pole relay. The serrated silver-nickel contacts with wiping action provide excellent reliability in 12 or 24 V control circuits. Special auxiliary contacts are available for switching low power down to 5 V at 10 mA. Timer and mechanical latch attachments are available.

**Transient Suppressor Module** dampens the voltage spike that may occur when the relay coil is de-energized. The spike may adversely affect solid state equipment near the relay. The transient suppressor module snaps into a cavity located in the side of the relay. These modules can be used with CA2SK and CA3SK relays.

**IEC Style Alternating Relays** are used to alternate the use of 2 motor circuits. When the coil is energized the first time, one contact closes and will open when the coil is de-energized. When the coil is energized again, the other contact will close and will open when the coil is de-energized. The contacts from these alternators are to be used in the control circuit of the starters that are controlling pump or compressor motors.

### Square D™ NEMA Style AC Relays

Class 8501 Type X relays combine a rugged, heavy-duty design with modular construction for greater flexibility. They are ideal for applications where long life, high reliability, and ease of maintenance are important. The Type X family offers a complete line of relays and accessories for most control applications. The 8501X relay consists of a standard 4 pole base to which it is possible to add additional contacts, timer, and latch functionality. Instantaneous and Master contacts are converted from N.O. to N.C. by flipping the contact cartridge within the base. The 8501X relay can either be built from individual part numbers or ordered pre-assembled.

#### AC Control Relays

- Straight-through wiring
- Plug-in contact cartridges for easy contact conversion and replacement

### Attachments and Accessories for Square D™ NEMA Style Relays

Table 23.135: Type X™ Relays

	Description	Type
	<p><b>Mechanical Latch Attachment</b>—Mounts on any 2 through 8-pole relay (except XMO master relay). The Type XL and XDL latch attachments are identical in size and mounting provisions. The Type XLAC latch attachment has a continuous-duty-rated coil which is replaceable. <b>The Type XDLDC latch attachment has an intermittent-rated coil (replaceable) and should be connected through a N.O. contact of the basic relay if the input signal is maintained to the unlatch coil.</b>                      AC Latch Attachment                      DC Latch Attachment</p>	XL [9] XDL[9]
	<p><b>Pneumatic Timer Attachment</b>—Mounts only on any 0 through 4-pole AC or DC relays (except XMO master relay). It provides 1 N.O. and 1 N.C. convertible timed contacts, which are the same Type XC1 cartridges used on the basic relay. Two timing ranges are available, and conversion from On Delay to Off Delay or vice versa is easy.  <b>Off Delay</b>                      0.2–60 seconds                      5–180 seconds  <b>On Delay</b>                      0.2–60 seconds                      5–180 seconds</p>	XTD1 XTD2 XTE1 XTE2
	<p><b>Timer Lockout Cover</b>—Fits over the time delay adjustment knob of any Type XT timing attachment. The Lockout Cover is designed to protect the time setting against accidental adjustment. It mounts directly to the timing attachment with two included screws.</p>	XJ1
	<p><b>Adder Decks</b>—Adder decks are used to expand the number of poles on a relay. The basic 4-pole relay can be easily converted to an 8-pole or 12-pole relay by installing one or two adder decks. The Class 8501 Type XB20 comes with 2 convertible contact cartridges and will accept 2 additional convertible contact cartridges. The Class 8501 Type XB40 comes with 4 convertible contact cartridges. The same Type XB adder deck is used for both the middle and upper decks of the AC or DC relay.</p> <p>With 2 N.O. contact cartridges</p> <p>With 4 N.O. contact cartridges</p>	XB20  XB40
	<p><b>Contact Cartridges</b>—The Type X relay offers 4 Types of contact cartridges. All are color-coded for visual identification of each Type.</p> <p><b>Standard Cartridge</b>—The standard cartridge, used for most applications, has a black case.</p> <p><b>Overlapping Cartridge</b>—Same NEMA Type A600 AC rating as standard cartridge and a NEMA Type P150 DC rating. When it is used in the N.O. mode it will close early and when used in the N.C. mode it will open late. If two or more are used together, the N.O. contacts will close before the N.C. contacts open as the relay picks up. Overlap also occurs during dropout. Overlapping cartridge has a red case.</p> <p>May be ordered factory installed:</p> <ul style="list-style-type: none"> <li>Substitute 1 N.O. and 1 N.C. overlapping cartridges for 2 standard cartridges.</li> <li>Substitute 2 N.O. and 2 N.C. overlapping cartridges for 4 standard cartridges.</li> <li>Substitute 3 N.O. and 3 N.C. overlapping cartridges for 6 standard cartridges.</li> <li>Substitute 4 N.O. and 4 N.C. overlapping cartridges for 8 standard cartridges.</li> </ul> <p><b>Master Cartridge</b>—Features the same contact ratings as the Type XC1 standard cartridge except it has a 20 ampere continuous current rating instead of 10 amperes. It can be used in circuits where a master relay is required. Master cartridge has a blue case. <b>Maximum of 6 master cartridges may be used on any 7 and 8-pole AC relays. Do not use any master cartridges on 9-12-pole AC or any DC-operated devices. Note: If master cartridges are added to a standard relay, attachments (latch mechanism, timers, etc.) cannot be used.</b></p>	XC1 XC2  Form Y1591 Y1592 Y1593 Y1594  XC4
	<p><b>Mounting Track</b>—The mounting track has pre-punched mounting holes to simplify mounting the track on the control panel. The relay mounting screws are factory installed on the track so that the relays can be hung prior to tightening the screws.</p> <p>9 in. long for 4 relays                      18 in. long for 8 relays                      27 in. long for 12 relays                      36 in. long for 16 relays</p>	XM4 XM8 XM12 XM16
	<p><b>Manual Test Tool</b>—Provides a means of manually switching the contacts of a basic relay or timing relay and holding all contacts in their switched state until the tool is removed. This simplifies the checking of control circuits without power on the coil or contacts.</p> <p><b>Transient Suppressor</b>—Consists of an R-C circuit designed to suppress coil generated transients to approximately 200 percent of peak voltage. It is particularly useful when switching the Type X relay near solid state equipment. It is designed for use on coils up to 120 Vac.</p>	XA1  XS1
	<p><b>NEMA 1 Enclosure</b>—Formed from sheet steel to provide strength and rigidity. Two conduit knockouts are located in both the top and bottom of the enclosure. The enclosure is furnished with self tapping screws for mounting the relay inside the enclosure. Accommodates a single 4 or 8-pole AC or DC relay, 12-pole AC relay, 4-pole AC latching relay, and 4-pole AC timing relay.</p> <p><b>NOTE:</b> The 4-pole DC latching relay, 4-pole DC timing relay, 8-pole AC and DC latching relays and 12-pole utility auxiliary relay will not fit.</p>	Class 9991 Type UE7

**Harmony™ Analog Interface Modules**

The Harmony Analog range of converters is designed to convert signals emitted by sensors or electrical measurement devices into standard electrical signals that are compatible with automation platforms and controllers. They also allow the connection distance between a sensor and a measurement device to be increased, for example, between a thermocouple and a programmable controller
