TERMINALS BOLTED ALUMINUM STRAIGHT BOLT/CABLE TO FLAT

ALUMINUM
ACF

Aluminum alloy terminal for connecting aluminum cable to aluminum or copper flat pad combinations. Side formed tongues are standard to allow clearance for flush mounting. Clamping bolts have hex-stops for one-wrench installation. Tongue holes have NEMA spacing. Contact sealant is recommended.

Material: Castings—356-T6 aluminum alloy
Clamping Hardware—aluminum alloy

45° & 90° Angle connectors may be obtained by specifying desired angle. **Example:** ACF11B2Y90

TERMINALS BOLTED ALUMINUM STRAIGHT BOLT TERMINAL, TUBE TO FLAT

ALUMINUM
ASTF

Aluminum alloy terminal for connecting aluminum tubing to aluminum or copper flat pad combinations. Side formed tongues are standard to allow clearance for flush mounting. Clamping bolts have hex-stops for one-wrench installation. Tongue holes have NEMA spacing. Contact sealant is recommended.

Material: Castings—356-T6 aluminum alloy
Hardware—aluminum alloy

Center formed pads may be obtained by adding suffix-CF to the catalog number.

Example: ASTF20B2CF

45° & 90° angle connectors may be obtained by specifying desired angle.

Example: ASTF20B2Y90

TERMINALS BOLTED ALUMINUM EXPANSION TERMINAL, TUBE TO FLAT

ALUMINUM
AFTF

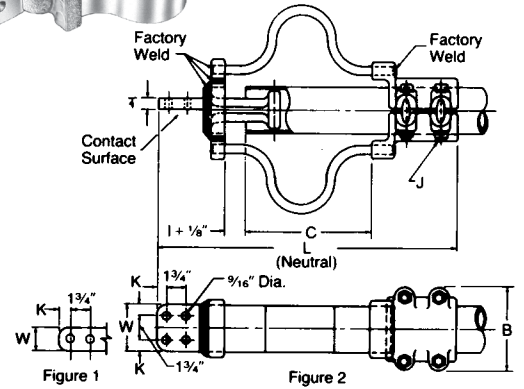

Aluminum laminated bolted expansion terminal for aluminum tubing to aluminum or copper flat pad. Designed for +/-2 inch expansion on tubing larger than 2" I.P.S. Guides and laminations are proper size for use with standard schedule 40 IPS tubing. Clamping bolts have hex-stops for one-wrench installation. Tongue holes have NEMA spacing. Contact sealant is recommended.

Material: Castings—356-T6 aluminum alloy
Factory formed laminated shunts—aluminum
Clamping hardware—aluminum alloy

Notes: (1)To specify extra heavy (schedule 80, EHIPS) tubing, add "H" to catalog number. **Example:** AFTFH40D
(2)To obtain pad rotated 90 degrees, add "V" to catalog number. **Example:** AFTFV30D

Refer to chart DC-9295 on page SA-6 for installation instructions.

∅ 140 ft. maximum total bus length.

INSTALLATION CHART DC-9295

SA
6

TYPICAL FLEXIBLE TERMINAL

TYPES AFTF AND WFTF

HOW TO USE CHART

1. Determine tubular bus temperature and locate on temperature scale.
2. Using 140 ft. bus length, locate the intersection of the bus length and the temperature reading.
3. Read "I" dimensions setting from this intersection point.
4. Total tubular bus length must not exceed 140 feet.

TERMINALS BRONZE BOLTED TAP LUG TERMINAL ONE CABLE TO FLAT

BRONZE
TLS

Bronze alloy terminal for connecting a copper cable directly to a flat copper pad. Recommended for power or grounding applications.

Material: **Castings**—Bronze alloy
Eyebolt—High strength bronze
Hardware—Stainless steel

Note: For copper cable connection to aluminum bus bar, specify tin-plated terminal with Belleville spring washer by adding suffix TPBW to catalog number. **Example:** TLS62LTPBW

* Eyebolt is of sufficient length to bolt through a maximum of 1/4" or 3/4" thickness for parts with the 'L' suffix.

TERMINALS

BRONZE BOLTED TAP LUG TERMINAL

ONE OR TWO CABLES TO FLAT

BRONZE
TLD

SA
8

Bronze alloy terminal for connecting one or two copper cables directly to a flat copper pad. Recommended for power or grounding applications.

Material: Castings—Bronze alloy
Eyebolt—High strength bronze
Hardware—Stainless steel

Notes: Sizes TLD32 through TLD89, can be tandem mounted side by side on NEMA 1 3/4" hole centers drilled for 1/2" bolts.

For copper cable connection to aluminum bus bar, specify tin-plated terminal with Belleville spring washer by adding suffix TPBW to catalog number.

Example: TLD62LTPBW

TERMINALS

BRONZE DOUBLE EYEBOLT TERMINAL ONE OR TWO CABLES TO FLAT

BRONZE
VL4D

SA
14

Double eyebolt, bronze alloy terminal for connecting one or two copper cables to copper flat. Double eyebolt provides high pullout resistance.

- Material:** Casting—bronze alloy
- Eyebolts—high strength bronze
- Hardware—silicon bronze or stainless steel

† Mounting pad is rotated 90° from plane of laminated copper straps.

TERMINALS BRONZE BOLTED MULTI-PURPOSE CONNECTOR CABLE, TUBE, FLAT

BRONZE
TS

SA
20

Bronze multi-purpose connector for connecting copper cable, tubing, or flats as terminals, couplers or tee connectors. Recommended for emergency stocks to prevent unnecessary stoppage. Reversible cap accommodates a wide range of cable or tubing sizes. Clamping bolts have hex-stops for one-wrench installation.

Material: Casting—bronze alloy
Hardware—silicon bronze or stainless steel

ALUMINUM WELDMENT CONNECTORS

INTRODUCTION

SA
22

Welded joints of aluminum conductors offer advantages over bolted and compression fittings in performance and economy for certain applications. This is especially true when the proper welding method (MIG or TIG) and the proper weldment connectors are selected.

The best electrical joints are obtained when quality connectors of proven performance, that are backed by a reputable connector manufacturer, are installed with the proper welding methods.

Electric arc welding, with an inert gas shield, provides electrically and mechanically sound joints that require no special surface preparation other than cleaning of the joint to be welded. There is no contact resistance in a properly welded joint. The resulting connection is highly efficient and adds very little bulk to the conductors.

From an economic standpoint, welded joints are more feasible in larger substations that can justify the services of experienced welders and the use of the proper welding apparatus. Practically all types of joints for joining aluminum angle bar, sheet and tubular bus are possible through the use of proper welding accessories. It is also practical to weld tubular bus to cable and cable terminal joints through proper welding techniques and cable connectors. Of course, proper provision must be made to free the cable of high stresses in the vicinity of the weld because of the annealed conductor strands.

Many techniques have been developed for the welded assembly of aluminum conductors in substations, but certain ones have been found to offer more advantages than others. Accessories in the form of cast aluminum weldment connectors have been developed to facilitate the joining and supporting of aluminum conductors. These connectors, as developed by Anderson, have been designed to provide:

1. Rigid support and proper alignment.
2. Fast assembly without need for tedious forming and fitting of bus.
3. Continuous welds of regular contours that provide a weld area equivalent to 1-10% of the cross sectional area of the connector.
4. Neat appearance without bulky additions beyond the size and shape of the conductors.
5. Smooth contours suitable for high voltage applications where corona and R.I.V. level are of concern.
6. Flexible couplers to compensate for expansion and contraction of bus.
7. Many other features available for specific applications.

Anderson supplies cast weldment fittings of 356 aluminum alloy which are heat treated to T6 condition for applications requiring high strength and good electrical conductivity. It is wise to choose the filler alloy on the basis of the parent metal alloys to be joined. A poor choice can cause various difficulties, i.e.,

1. Low strength.
2. Weld cracking.
3. Poor corrosion resistance.
4. Poor color matching.
5. Difficulty in welding.

The filler rod material recommended by Anderson for joining 356-T6 cast aluminum fittings to EC grade aluminum conductor materials is 4043 alloy. This filler material has a typical conductivity of 40 per cent (IACS). Although it would appear that a purer material should be used for welding aluminum castings and the EC grades of conductor materials, the resulting joint usually has a lower resistance than an equivalent length of conductor. Also, a further point for consideration is that 4043 alloy is considerably easier to weld than the higher purity filler materials.

For more information on Welding Methods and Apparatus, see reference section ST.

TERMINALS

WELDMENT ALUMINUM TERMINAL CABLE TO FLAT

ALUMINUM
WCF

Aluminum alloy weldment terminal for connecting aluminum cable to aluminum or copper flat pad. Tongue holes have NEMA spacing. Contact sealant is recommended for contact pad after welding. Cable should be positioned 1/8" to 3/16" from edge inside barrel prior to puddle welding. For use with any stranding Aluminum conductor.

Material: Casting—356-F aluminum alloy

45° & 90° angle connectors may be obtained by specifying desired angle.

TERMINALS

WELDMENT ALUMINUM TERMINAL

TWO CABLES TO FLAT

ALUMINUM
W2CF

Aluminum alloy weldment terminal for connecting two aluminum cables to aluminum or copper flat pad. Tongue holes have NEMA spacing. Contact sealant is recommended for contact pad after welding. Cable should be positioned 1/8" to 3/16" from edge inside barrel prior to puddle welding. For use with any stranding Aluminum conductor.

Material: Casting—356-F aluminum alloy

45° & 90° angle connectors may be obtained by specifying desired angle.

Example: W2CF72CY90

ALUMINUM
WSTF

TERMINALS WELDMENT ALUMINUM TERMINAL TUBE TO FLAT

Aluminum alloy weldment terminal for connecting aluminum tubing to aluminum or copper flat pad. Tongue holes have NEMA spacing. Contact sealant is recommended for contact pad after welding.

Material: Casting—356-F aluminum alloy

Center formed pad may be obtained by adding "CF" to catalog number.

Example: WSTF10B2CF

45° & 90° angle connectors may be obtained by specifying desired angle.

Example: WSTF06B2Y90

TERMINALS WELDMENT ALUMINUM EXPANSION TERMINAL TUBE TO FLAT

ALUMINUM
WTFF

Aluminum alloy weldment expansion terminals for connecting standard (Schedule 40) aluminum tubing to aluminum or copper flat pad. Designed for +/- 2 inch expansion. Specify "H" in catalog number (WTFFH) if Schedule 80 EHIPS tubing is to be used. Proper guide ball and heavy laminations will be furnished. Contact sealant is recommended for contact pad.

Material: Casting—356-F aluminum alloy
Factory formed laminated shunt—aluminum

Note: To obtain pad rotated 90 degrees, add "V" to catalog number.

Example: WFTFV30D

Refer to chart DC-9295 on page SA-6 for installation instructions.

Jumper terminals are pre-filled with inhibitor. Pad holes have NEMA spacing.

Material: Terminal-Seamless Extruded Aluminum Tube
For use with conventional hex die tooling (3)
Available with 15, 45 or 90 degree angled pad.
Example: ACF1196N445 for 45 degree pad angle.

IDENTIFICATION:
CONDUCTOR DIAMETER RANGE
DIE SIZE, MIN PRESS SIZE
DATE CODE, HPS
CATALOG NO.

- NOTES:**
- These terminals are also recommended for AAAC and ACAR conductors within the diameter ranges listed.
 - Terminals are pre-filled with Anderson/Fargo standard joint compound.
Consult factory for terminals pre-filled with high performance, conductive-grit compound type HTJC.
 - Terminal ACF1196N4 and smaller may be compressed with Anderson Versa-Crip tools. Consult factory for tool size and crimping procedure.
 - Terminals are EHV rated where conductor is 1 in. O.D. or larger.
 - The ACF terminals on this page replace cast terminals in the CCL series.

TERMINALS SHORT BARREL COMPRESSION CABLE TO FLAT

ALUMINUM
CCLS

SA
30

Aluminum cast, compression terminal for connecting aluminum cable to flat pad. Connector barrel is filled with rubber compatible sealant and enclosed in clear plastic bag. Contact sealant is recommended on the pads. Pad holes have NEMA spacing. Pads have contact surface on both sides. Short barrel requires less space and allows faster installation.

Material: Cast aluminum

For use with VERSA CRIMP® tooling through CCLS1300 (Die Ref. 1.844) and conventional compression tooling. Refer to Chart C-13282 on page A-34 for tool and die information.

Example: CCLS563B90

COPPER TERMINAL CABLE TO FLAT TYPE BCL

COPPER
BCL

Heavy duty, copper compression terminal for connecting copper cable to copper flat pad. Pad holes have NEMA spacing.

Material: CDA 110 Copper

For use with conventional compression tooling. Refer to page A-51 for tool and die information.

SA
33

Example: BCL024BY90

NOTES:

1. Crimps should overlap and start from the inside working outward with the last crimp extending past the end of the connector.
2. It is recommended that a light coat of lubricant (such as Anderson's 155 grease) be applied to the crimping face of the dies.
