Introduction

Protect your facility with the latest from nVent ERICO Surge Protective Devices.

- ✓ **Up to 480 kA per phase surge rating in a new compact design**
- ✓ **Optional filter with up to 64 dB attenuation**
- ✓ **LED indicators, audible alarms and Form C contacts**
- ✓ **cUL 1449 Ed. 5 and UL 1283 Ed. 7**

nVent ERICO has a range of specialized devices that are unmatched in capabilities and performance, including surge diversion, surge filtering and TD technology.

Although lightning is the most spectacular form of externally generated surges, it is only one source of over-voltage. Significant damage can occur, even to the more robust systems, as a result of lightning induced surges or from switching induced surges. With power quality problems, it is important to correctly identify the problem in order to ensure that the intended preventative equipment is suitable.

Achieving an adequate level of protection against high and low-level transient events results in prevention of costly downtime. Proper electrical protection of structures, operations

and personnel demands a systematic and comprehensive approach to protection.

nVent ERICO's line of Service Entrance Suppression is designed to protect sensitive electronics at the service entrance for residential or light commercial service panels. These models protect against both surges caused by severe transient events as well as smaller scale disruptions alike.

Filter Model Chart

nVent ERICO product development creates innovative products backed with 100 years of industry experience.

Our products go through rigorous testing and research to validate they are ready to protect your facility.

In this test (MIL-STD 220A), the filter is effective at reducing the amplitude of AC voltage signals, especially as a frequency of 500 kHz is approached. Attenuation across a range of frequencies appears to be consistent within the voltage range tested. Frequencies greater than 15 MHz resulted in the sinusoidal signal becoming distorted beyond recognition and the Vpp unable to be measured.
