Electric

ATV900 Drive Solutions

Product at a glance

Altivar Process is the new comprehensive range of variable speed drives from Schneider Electric covering the majority of industrial applications.

- ATV900: drives focused on exceptional motor control and connectivity to maximize process productivity
- Type 1, 12 and 3R enclosures are available in both wall and floor mounting configurations.

High Performance Drive Solutions

The Process Family of Drives offers maximized application control and optimization

The Altivar Process family offers a wide array of solutions to fit your application needs. From enclosed low harmonic solutions utilizing three level active rectification to general purpose drives, your requirements are met.

Current Altivar Process 900 Offer Range

Altivar 930 Drive Solutions

- HP Range: 1-500HP 480V
- HP Range: 1-100HP 240V
- Type 1 Solutions

FOR MORE INFORMATION:
See ATV900 eCatalog

Altivar 960 System Solutions

- HP Range: 1-900HP 480V
- HP Range: 1-60HP 240V
- Type 1, 12, Type 3R Solutions

FOR MORE INFORMATION:
See ATV960 Brochure 8800BR1601

Altivar 600 Solution Attributes

General Purpose Drive

Pumping and Fluid Transfer

Air Compression

Fluid Movement Designed Internal Functions

Altivar 900 Solution Attributes

High Performance Drive

Designed for moving mass, mechanical movement

Braking / Regen Functionality

Hoisting, Artificial Lift Specific Functions

Altivar 980 Regenerative Drive Solutions

- HP Range: 150-500HP 480V
- Type 1, 12 Solutions

FOR MORE INFORMATION:
See ATV980 Handbook NHA37117.00

Altivar Process

Provides the efficiency you deserve

Process efficiency

Motor performance and connectivity

- Excellent motor performance on induction or permanent magnet motors
- Dual port Ethernet offers maximum services such as connection to the control room and process monitoring
- Network service helps ensure operation continuity even in case of connection breakdown

Complete control of your applications

- Maximize your application performance by using Drive-to-Drive communication: total control of any kind of coupling in master/slave applications
- Total management and flexibility of speed and torque on rigid and elastic coupling

Real-time intelligence

Web server and services via Ethernet

- Embedded web server interface based on the Ethernet network gives you process monitoring with your daily working tools
- Local and remote access to energy use and customized dashboards means your energy is visible anywhere, any time, on PC, tablet, or smartphone
- Web server and data logging help reduce downtime through fast troubleshooting and preventive maintenance

- From basic processes to advanced custom solutions
- Wall-mounting drives from 1 HP to 500 HP
- Drive Systems from 150 HP to 900 HP

Selection Guide

UL Type 1 variable speed drives for asynchronous and synchronous motors

Market segments		<ul style="list-style-type: none"> • Oil & gas • Mining, minerals & metals • Food & beverage • Water & wastewater 		
Mounting type		Wall-mounting		
Degree of protection		IP 21/UL Type 1	IP 21/UL Type 1 without braking unit	
50...60 Hz line supply ⁽¹⁾	Three-phase: 200...240 V (kW/HP)	0.75 ...45/1...60	55...75/75...100	
	Three-phase: 380...480 V (kW/HP)	0.75...90/1...125	55...160/75...250	
	Output frequency	0.1...500 Hz		
Drive	Control type Asynchronous motor	Standard constant torque, optimized torque mode		
	Control type Synchronous motor	PM (Permanent Magnet) motor		
Functions	Advanced functions	<ul style="list-style-type: none"> • Performance on motor control with an overload torque up to 150% Tn in an open or closed loop • Asynchronous, synchronous, switch reluctance: all efficiency classes, brand independent, permanent magnet motors, torque motors, conical sliding rotor, reluctance motor • Integrated EtherNet/IP and Modbus TCP dual port, cybersecurity (Achilles Level 2) • Smart integration in PlantStruxure and Foxboro Evo process automation systems • Optimized energy efficiency, detection of energy consumption drift of the installation • Adaptation to the process by dedicated functions with modular design • Embedded safety functions STO SIL3 • Master/slave and load sharing with drive-to-drive capability: • Torque sharing on rigid coupling • Torque sharing on elastic coupling • Contextual access to technical documentation through dynamic QR code • Continuous and historical real-time measurements with customizable dashboards • Predictive maintenance (e.g.: temperatures with PT100/1000 probe, fan monitoring, etc.) 		
		Integrated safety function 1: STO (Safe Torque Off) SIL3		
		Number of preset speeds 16		
Number of integrated I/O	Analog inputs	3: Configurable as voltage (0...±10 V) or current (0-20 mA/4-20 mA), including 2 for probes (PTC, PT100, PT1000, or KTY84)		
	Digital inputs	8: Voltage 24 V c (positive or negative logic)		
	Digital output	1: Assignable		
	Analog outputs	2: Configurable as voltage (0...10 V) or current (0-20 mA)		
	Relay outputs	3: 1 with NO/NC contacts and 2 with NO contacts		
	Safety function inputs	2: For safety function STO		
I/O extension modules (optional)	Analog inputs	2 differential analog inputs configurable via software as current (0-20 mA/ 4-20 mA), or for PTC, PT100 or PT1000, 2 or 3-wire		
	Digital inputs	6: Voltage 24 V c (positive or negative logic)		
	Digital outputs	2: Assignable		
Relay output module (optional)	Relay outputs	3: NO contacts		
Communication	Integrated	EtherNet/IP and Modbus/TCP dual port, Modbus serial link		
	Option modules	PROFINET, CANopen RJ45 Daisy Chain, Sub-D, and screw terminals, Profibus DP V1, EtherCAT, and DeviceNet		
Configuration and runtime tools		Graphic display terminal, embedded web server, DTM (Device Type Manager), SoMove software		
Standards and certifications		Open Drives UL508C, Drive Systems UL508A, EN/IEC 61800-3, EN/IEC 61800-3 environment 1 category C2, EN/IEC 61800-3 environment 2 category C3, EN/IEC 61800-5-1, IEC 61000-3-12, IEC 60721-3, IEC 61508, IEC 13849-1, REACH		
References		ATV930.....	ATV930.....C	

(1) In "Normal duty" power values are given for applications requiring a slight overload (up to 120%).
For power values in "Heavy duty" applications requiring a significant overload (up to 150%).

Web server

Product overview

The Web server can be accessed:

- For a drive not connected to an Ethernet network
 - Via an Ethernet cable or the Schneider Electric WiFi dongle (the drive then appears as a network device)
- For a drive connected to an Ethernet network
 - From any point on the network by entering the drive IP address

The Web server is used for:

- Commissioning the drive (setting configuration parameters and enabling the main functions)
- Monitoring energy and process data, as well as drive and motor data
- Diagnostics (drive status, file transfer, detected error and warning logs)

Description

The Web server is structured around 5 tabs:

“My dashboard” tab:

- Configurable using a wide choice of widgets; groups all the information and dashboards selected by the user on one page

“Display” tab:

- Monitors energy indicators, efficiency, and performance
- Displays process data
- Monitors drive parameters and status
- Shows the I/O state and assignment

“Diagnostics” tab:

- Drive status
- Time and date-stamped warning and detected error logs
- Network diagnostics
- Access to drive self-tests

“Drive” tab:

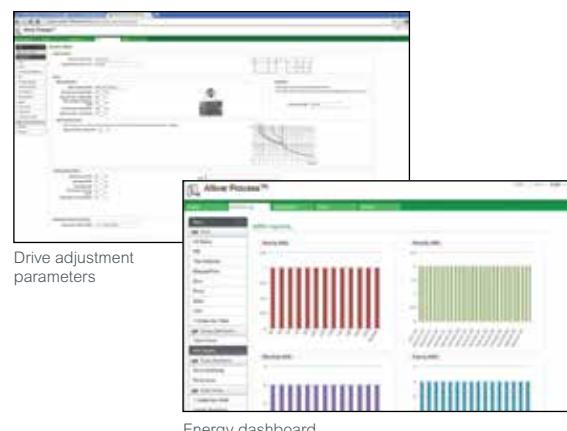

- Access to the main drive adjustment parameters with screens help

“Setup” tab:

- Network configuration
- Access management
- Transferring and retrieving drive configurations
- Exporting data acquisition files and logs
- Customizing pages (colors, logos, etc.)

Other characteristics:

- Ease of connection via the RJ45 port or WiFi connection
- Password-protected authentication (modifiable password; access rights can be configured by administrator)
- No downloads or installation necessary
- Web server can be disabled
- Works in a similar way on PCs, iPhones, iPads, Android systems, and the following major web browsers:
 - Internet Explorer® (version 8 or higher)
 - Google Chrome® (version 11 or higher)
 - Mozilla Firefox® (version 4 or higher)
 - Safari® (version 5.1.7 or higher)

Drive adjustment parameters

Application Functions

Introduction

The following tables show the combinations of functions and applications in order to guide your selection. The functions in these tables relate to the following applications:

Mining, Mineral and Metal (MMM):

- Long belt conveyor
- Long-distance heavy conveying
- Crusher
- Grinding mills
- Vibro feeders

Hoisting:

- Special cranes (Gantry cranes - Grab cranes)
- Ship loaders

Food & Beverage:

- Mixers
- Centrifuges machines
- Hot rotary dryers

Oil & Gas:

- PCP (Progressive Cavity Pump)
- ESP (Electrically Submersible Pump)
- Rod pump

Each application has its own special features, and the combinations listed here are not mandatory or exhaustive. Some functions are designed specifically for a given application. In this case, the application is identified by a tab in the margin on the relevant programming pages.

Combinations of Functions and Applications

Function	Application functions						Process
	Metals Minerals & Mining		Oil & Gas			Food & Beverage	
	Conveyor	Hoisting	Sucker Rod Pump	PCP control	ESP control	High inertia	
ENA system			X				
Brake sequence	X	X					
Boost for conical motors	X	X					
Limit switch management	X						
Torque regulation	X						X
Positioning / Autostop on distance	X						
Positioning value for PLC	X	X					
Load sharing	X	X				X	X
Master/Slave management	X	X				X	X
Master/Slave on rigid coupling	X	X				X	
Master/Slave on elastic coupling	X	X					
Backspin sequence for PCP pumps				X	X		
Backspin control for PCP pumps				X	X		
Braking balance		X				X	X
DC Bus charge option						X	X

Function	Application functions						
	Metals Minerals & Mining		Oil & Gas			Food & Beverage	Process
	Conveyor	Hoisting	Sucker Rod Pump	PCP control	ESP control	High inertia	
High-speed hoisting		X					
Commutation high speed		X					
External error	X	X	X	X	X	X	
Catch on the fly	X		X	X	X	X	
Motor Overspeed		X		X	X		X
Torque limitation	X						
Encoder check	X	X					X
Reverse disable			X	X	X	X	X
Thermal monitoring of the braking resistor	X	X				X	
Under load detection	X			X	X		
Fast stop	X	X				X	
Dynamic load detection	X						
Mechanical resonance rejection		X				X	X
Stall monitoring	X					X	X
Load slipping monitoring		X					
Rope slack and anti rope slack detection		X					
Motor switching	X	X					
Configuration switching	X	X					
Parameter switching	X						
Current threshold function	X	X	X	X	X	X	X
Torque threshold reached	X	X				X	X
Frequency threshold reached	X	X	X	X	X	X	X
Thermal state reached	X	X	X	X	X	X	X

(1) Altivar Process ATV930***M3 drives have been designed without an EMC filter. An additional filter can be added to help meet more stringent requirements and reduce electromagnetic emissions.

(2) These values are given for a nominal switching frequency of 4 kHz up to ATV930D22M3 or 2.5 kHz for ATV930D30M3..D45M3 and ATV930D30M3C..D75M3C, for use in continuous operation. The switching frequency is adjustable. Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on our website www.schneider-electric.com).

(3) Typical value for the indicated motor power and for the prospective line Isc. (4) Values given for applications requiring a slight overload (μ to 120%).

(5) Values given for applications requiring a significant overload (up to 150%). (7) For Short Circuit Current Rating (SCCR) information, see document number NHA61583, Annex to the Getting Started with Altivar Process ATV930.

Note: Consult the summary tables of possible drive, option, and accessory combinations as outlined in the Process Manual.

(1) Category C2 EMC filter for ATV930U07N4...D45N4. Category C3 EMC filter above ATV930D45N4.

(2) These values are given for an adjustable nominal switching frequency of 4 kHz for ATV930U07N4...ATV930D45N4 or 2.5 kHz for ATV930D55N4...D90N4, for use in continuous operation. Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on our website www.schneider-electric.com).

(3) Typical value for the indicated motor power and for the prospective line Isc.

(4) Values given for applications requiring a slight overload (up to 120%).

(5) Values given for applications requiring a significant overload (up to 150%).

(6) Product supplied as IP 00 for mounting in an enclosure. For IP 21/UL Type 1 wall mounting, a conformity kit should be ordered separately (see page 60852/9).

Note: Consult the summary tables of possible drive, option, and accessory combinations as outlined in the Process Manual Global Change.

Dimensions	
Frame Size	W x H x D (inches)
1	5.67 x 13.78 x 8.11
2	6.73 x 16.10 x 9.29
3	8.31 x 21.49 x 9.25
4	8.90 x 26.50 x 10.79
5	11.42 x 36.30 x 12.81
6	12.60 x 33.54 x 15.47
6 (with conduit box)	12.60 x 45.55 x 15.47
7A	17.32 x 46.85 x 14.84
7B	23.54 x 46.85 x 14.84

(2) In "Normal Duty", apply a derating of Pn-1 to the drive nominal power with a minimum switching frequency of 4 kHz. For example: an ATV630D75M3 drive with sinus filter can be used on a 55 kW motor.

(3) Maximum length of unshielded cable: 300 m. For other lengths or for shielded cables.

 (3) Maximum combination involving two types of module is 1.

Option: Encoder interface modules

Overview

Encoder interface modules are used for Flux Vector Control operation with sensor (FVC mode) for asynchronous motors, or for Vector Control operation with speed feedback (FSY mode) for synchronous motors.

Improved drive performance during demanding motor load states:

- Zero speed torque
- Accurate speed regulation
- Torque accuracy
- Shorter response times on a torque surge
- Improved dynamic performance in transient state

For asynchronous motors, in the other control modes (voltage vector control, voltage/frequency ratio), encoder interface modules improve static speed accuracy.

Depending on the model, encoder interface modules can also be used for monitoring, irrespective of the control type:

- Overspeed detection
- Load slipping detection

They can also transmit a reference value provided by the encoder input to the Altivar variable speed drive. This specific feature is used to synchronize the speed of several drives. The encoder options have a thermal sensor input to monitor one standard temperature sensor.

4 modules are available depending on the encoder technology:

- Resolver encoder
- Encoder with digital output
- Encoder with analog output
- HTL Encoder Interface

The Altivar variable speed drive can only be equipped with one of the encoder interface modules. The interface encoder module is inserted in a dedicated slot. It is protected against encoder supply short circuits and overloads.

VW3A3422 analog interface encoder module

VW3A3424 HTL encoder interface module

Option: I/O extension modules

Feature overview

By installing I/O extension modules Altivar Process drives can be adapted to meet the needs of applications that manage additional sensors or specific sensors.

2 extension modules are available:

- Module with digital and analog I/O
- Module with relay outputs

These modules are inserted in slots A and B on Altivar Process drives:

- 1 Slot A for I/O extension or fieldbus modules
- 2 Slot B for I/O extension modules

Module with digital and analog I/O

- 2 differential analog inputs configurable via software as current (0-20 mA/4-20 mA), or for PTC, PT100, or PT1000, 2 or 3-wire
 - 14-bit resolution
- 6 x 24 V = positive or negative digital inputs
 - Sampling: 1 ms max
- 2 assignable digital outputs
- 2 removable spring terminal blocks

VW3A3203

Module with relay outputs

- 3 relay outputs with NO contacts
- 1 fixed screw terminal block

VW3A3204

Description	I/O type				Reference	Weight kg/lb
	Digital inputs	Digital outputs	Analog inputs	Relay outputs		
Module with digital and analog I/O	6	2	2 ⁽¹⁾	–	VW3A3203	–
Module with relay outputs	–	–	–	3 ⁽²⁾	VW3A3204	–

(1) Differential analog inputs configurable via software as current (0-20 mA/4-20 mA), or for PTC, PT100, or PT1000, 2 or 3-wire. When configured as PTC probe inputs, they must never be used to protect an ATEX motor in applications in explosive atmospheres. Please refer to the ATEX guide on our website www.schneider-electric.com.

(2) NO contacts.

Note: Digital and analog I/O modules and relay output modules can go in either slot A or slot B on Altivar Process drives. However, the drives cannot take 2 modules of the same type (e.g., 2 digital and analog I/O modules or 2 relay output modules).
