SOLVE.<sup>®</sup>

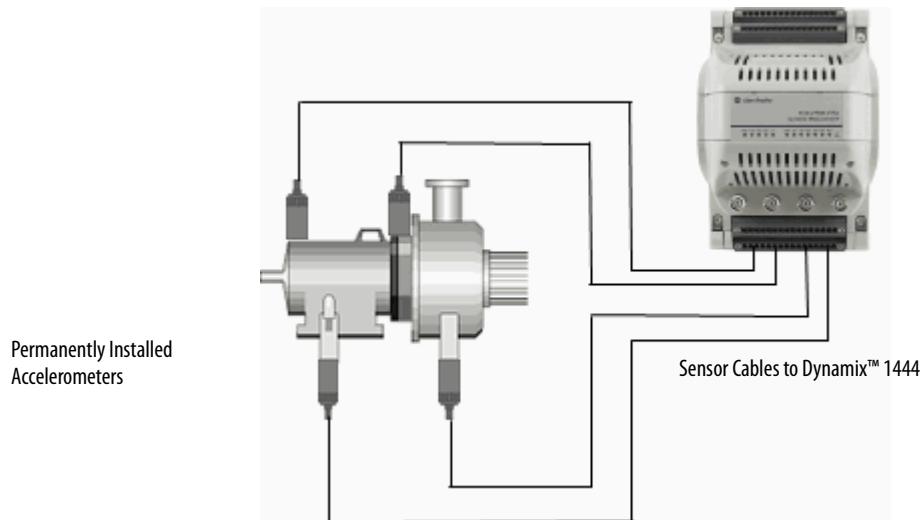

Rockwell Automation® 1443 Series Accelerometers are general-purpose sensors that are used to measure vibration on industrial machinery. In addition to our general purpose sensors, the 1443 Series family includes sensors with these varied capabilities:

- Low Frequency, as low as 0.1 Hz or 6 cpm
- High Frequency, up to 20 kHz or 1200 kcpm
- Velocity Output, internal integrator
- Hazardous Area Approved
- Dual Accelerometer and Temperature Output

## Typical Vibration-Measurement Systems

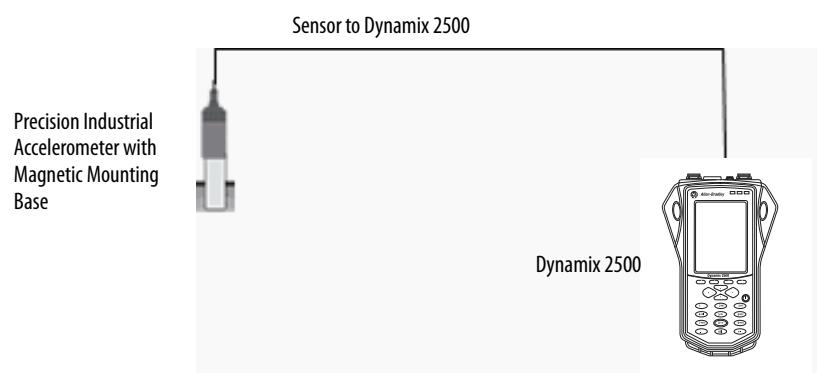

Accelerometers are either permanently mounted or carried from point-to-point in a route-based measurement or analysis scheme. The entire measurement system, however, can take on various forms, depending on sensor type and the goal of the monitoring program. The following examples illustrate vibration measurement and monitoring systems.

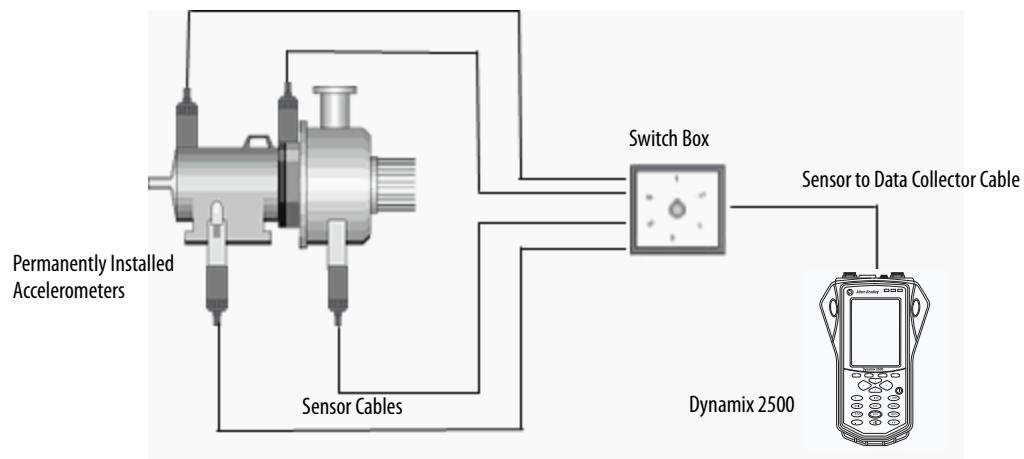

**Figure 1 - Dynamix™ System and Permanently Installed Accelerometers**

**Figure 2 - Portable Data Collector and Permanently Installed Accelerometers**

**Figure 3 - Portable Data Collector and Accelerometer**

**IMPORTANT** All specifications are at room temperature unless otherwise specified.

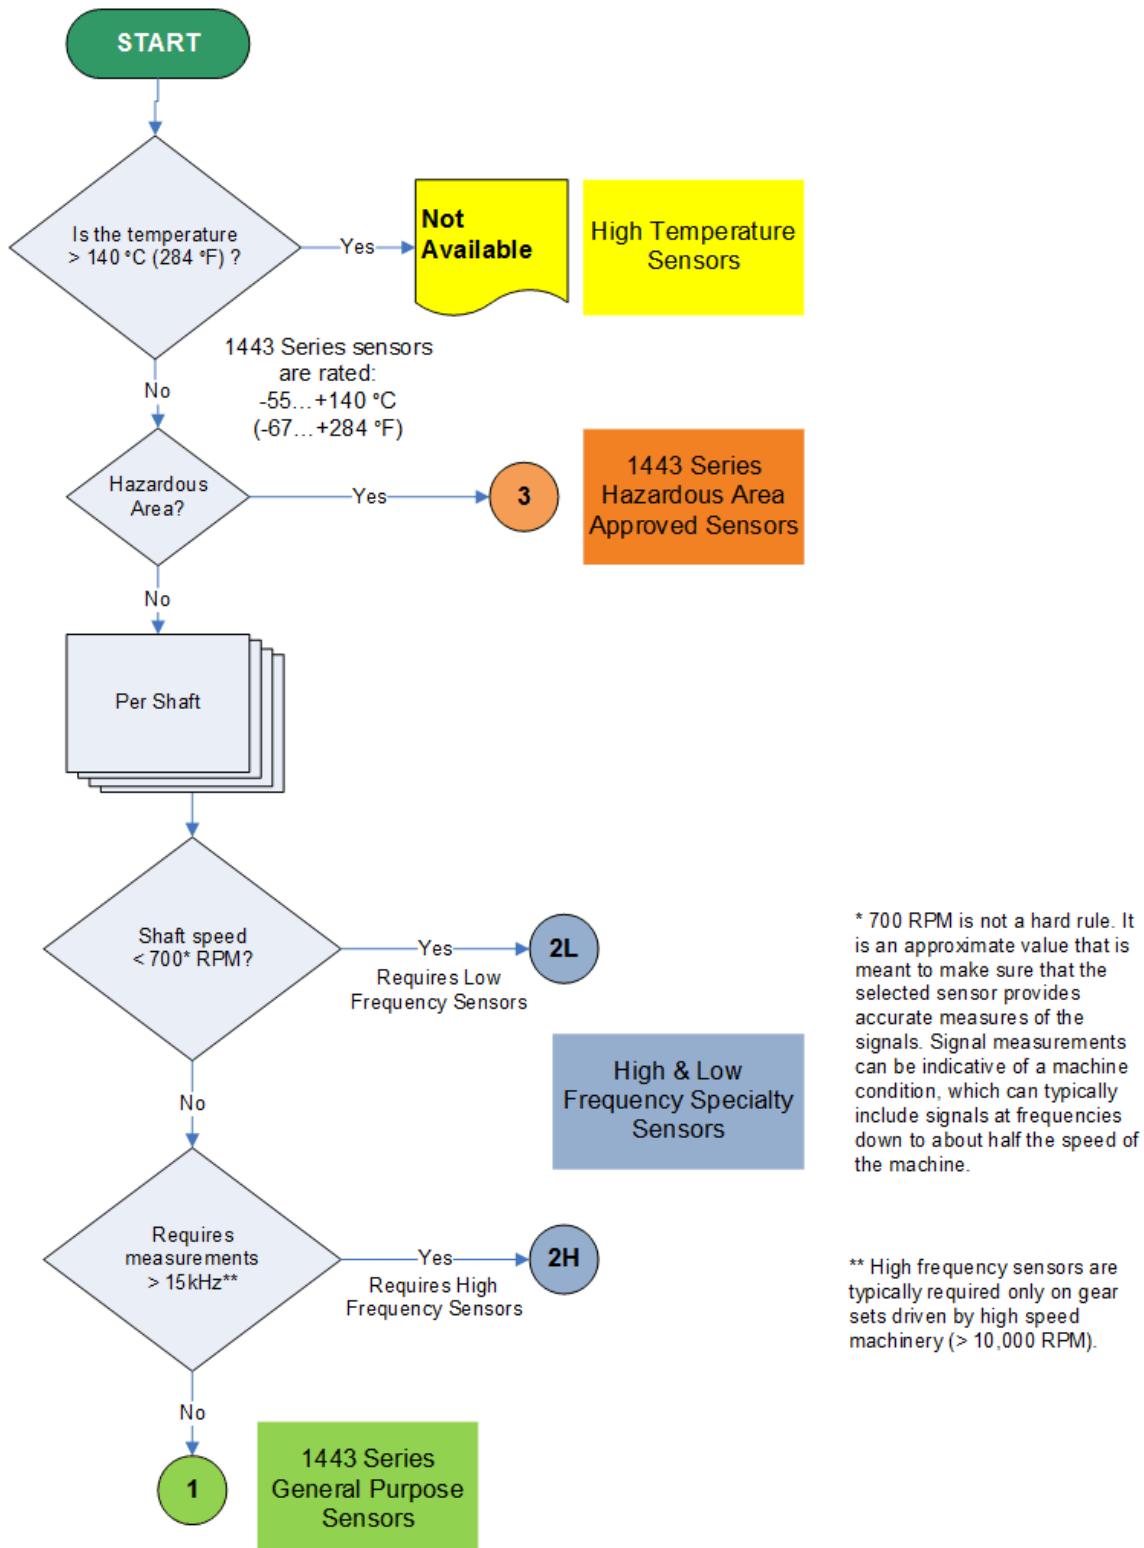

For certification information, see Declaration of Conformance at <http://www.rockwellautomation.com/products/certification>.

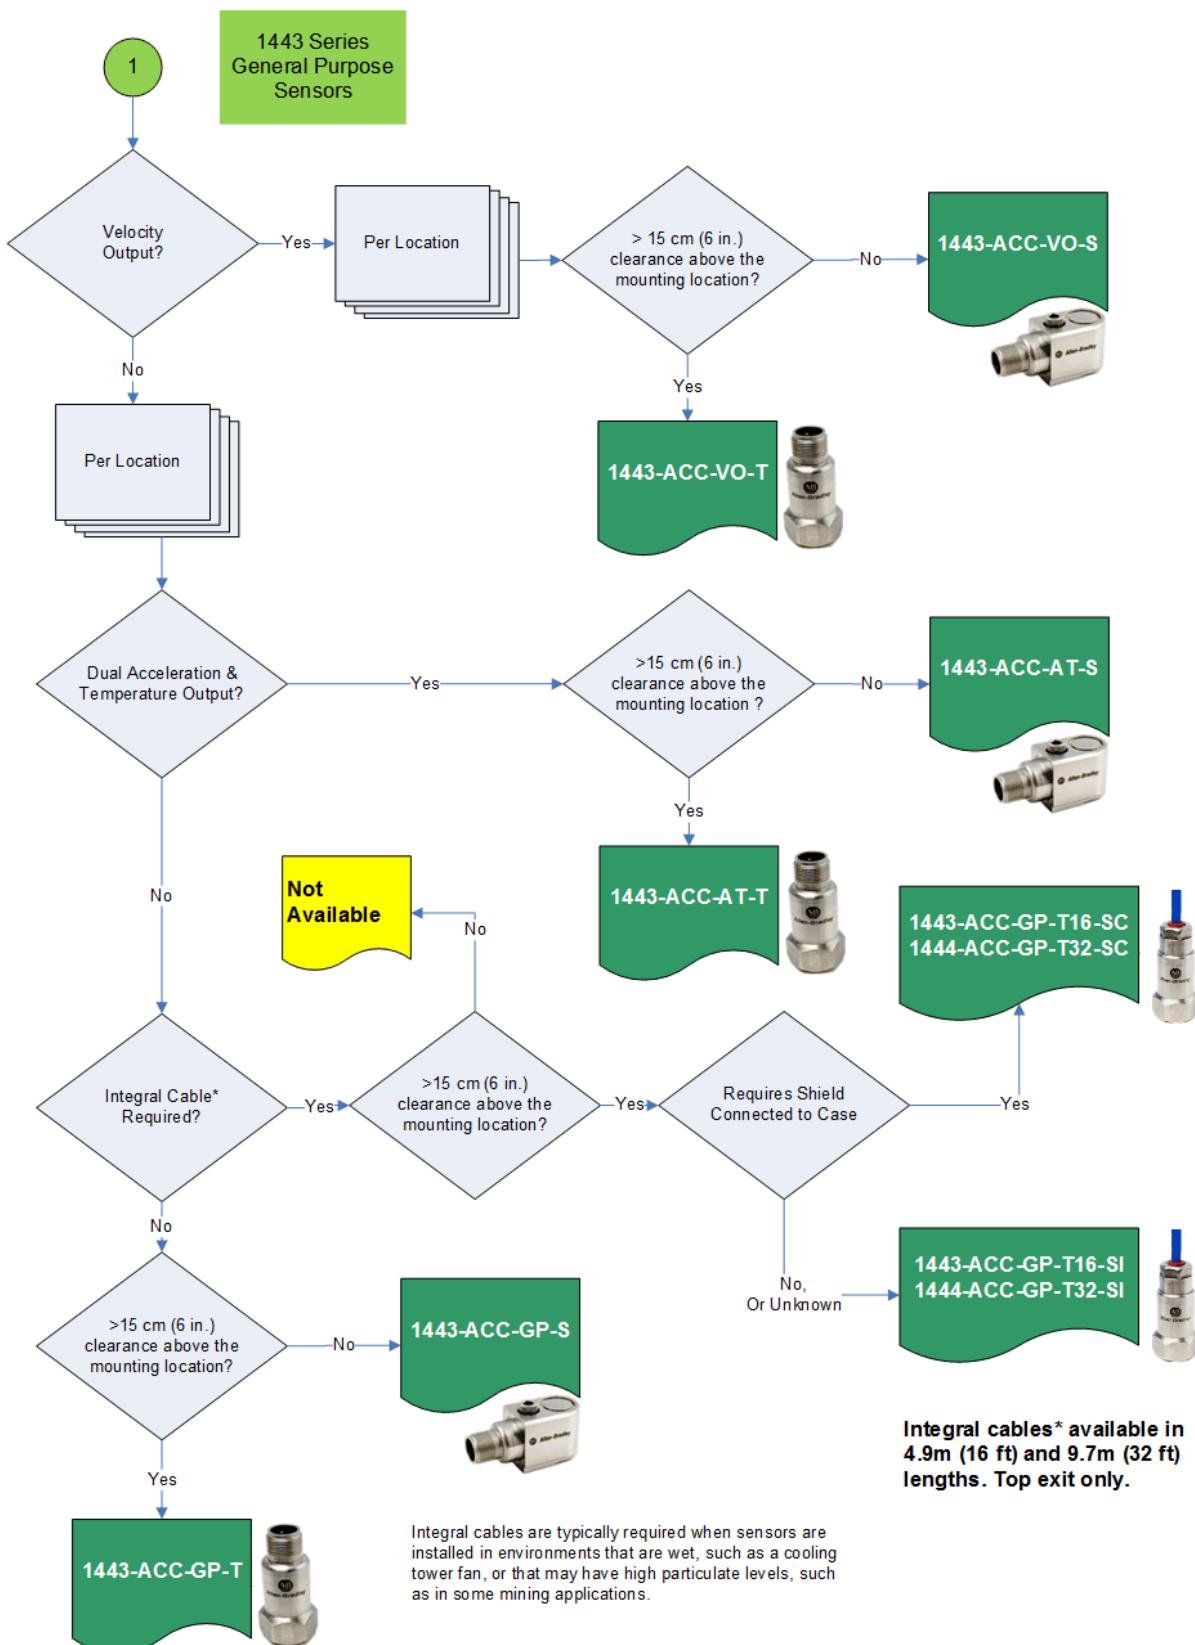

Optional versions have identical specifications and accessories as listed for standard model except where noted. Multiple options can be used.

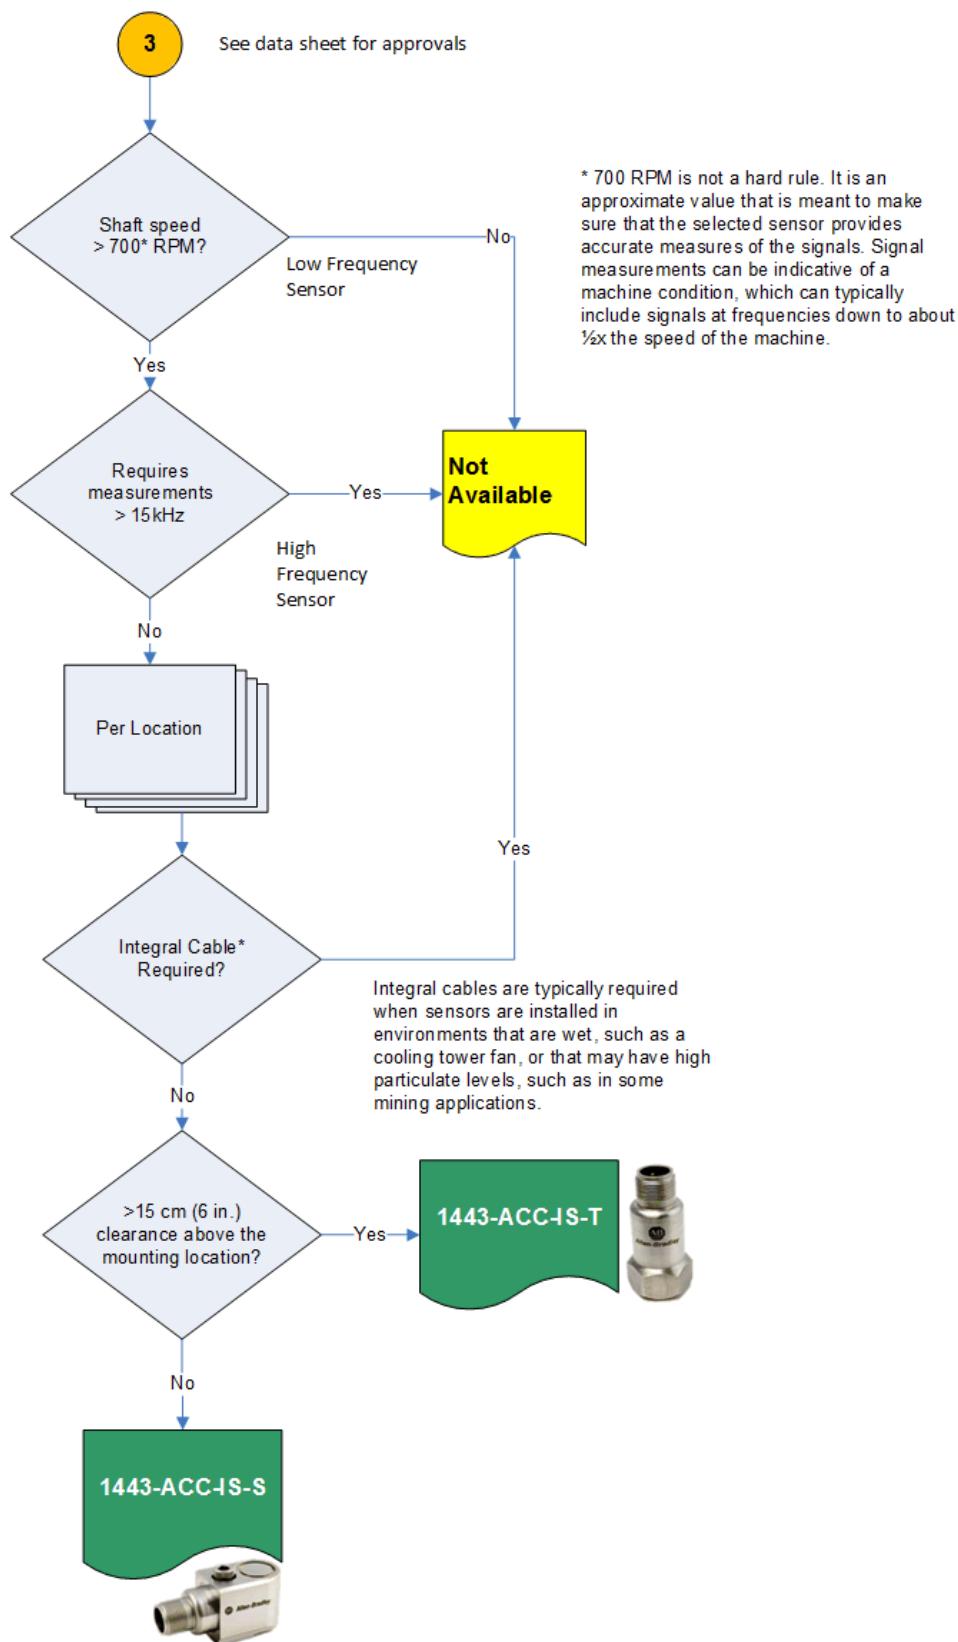

## Sensor Selection Process

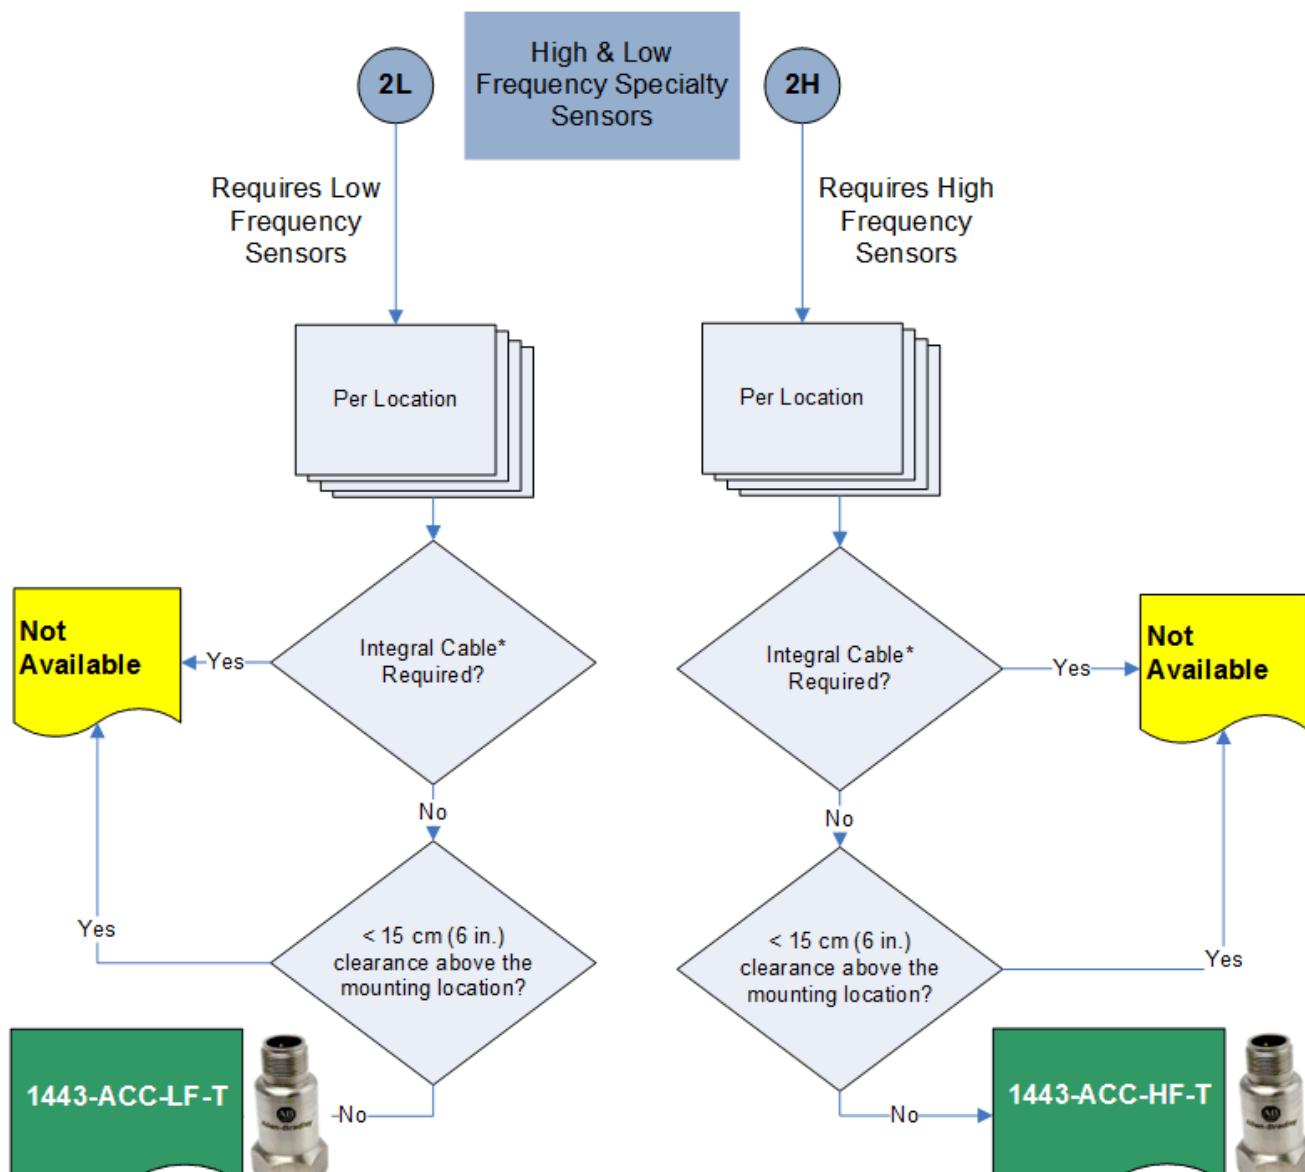

This flowchart illustrates the process that you can follow to select the appropriate sensor for your application.

**Figure 4 - Sensor Selection Flowchart**

## Shield Wire Isolation Sensor and Cable Selection

The 1443 Series include sensor and cable solutions that isolate the shield wire from the sensor, or that ground the shield wire to the sensor. For standard sensors, select either shield isolated or shield grounded cables, where the shield wire is either isolated from or connected to the sensor connector. When a sensor with an integral cable is required, select a sensor with its shield wire isolated from the sensor or that has its shield wire grounded to the sensor.

When a shield to sensor isolated solution is required, which is the normal recommended method:

- If a sensor without an integral cable is required, then use an accessory cable that has its shield wire isolated from the sensor connector by selecting a cable with 'IBC' in its catalog number, for example, 1443-CBL-MS2IBC-32S.
- If a sensor with an integral cable is required, then use a sensor with its shield wire isolated from the sensor by selecting a sensor with 'SI' in its catalog number, for example, 1443-ACC-GP-T16-SI.

When a shield grounded sensor is required:

- If a sensor without an integral cable is required, then use an accessory cable that has its shield wire grounded to the sensor connector by selecting a cable with 'GBC' in its catalog number, for example, 1443-CBL-MS2GBC-16S.
- If a sensor with an integral cable is required, then use a sensor with its shield wire grounded to sensor case by selecting a sensor with 'SC' in its catalog number, for example, 1443-ACC-GP-T16-SC.

The recommended solution is to connect the shield at the measurement system and leave it isolated at the sensor end, so use IBC version cables or 'SI' version sensors, when an integral cable sensor is required. However, when EMI problems are present, or expected, then a shield case grounded solution can prove to be a better design.

When signal noise or interference is a problem or concern, understanding the source of the problem is key to resolving it. Noise can be introduced into signals from accelerometers through these common phenomena:

- Electromagnetic Interference (EMI)

EMI is the introduction of unwanted signals into an electronic device from electromagnetic fields generated by another electronic device. Televisions, radars, passing vehicles, Variable Frequency Drives (VFDs), and other electronic devices can produce high powered electromagnetic fields. EMI can be introduced into the measurement system via the signal wiring when that wiring acts as an antenna, which occurs when one end of the wire is ungrounded.

When EMI occurs, it typically results in signals being introduced at discrete frequencies related to the signal source. How this affects measurements is dependent on the magnitude and specific frequency of the signal that is induced, relative to the measurement systems design signal magnitude and frequency range and the expected signals that are intended to be measured.

- Ground Loops

In electronics, a ground loop is caused when a device has multiple paths for electricity to flow to ground. In a measurement system, this commonly occurs when a signal wire is grounded at both ends, with each end having a different potential (resistance) to ground.

Key to this, for accelerometer measurement systems, is knowing if the machine case, or bearing housing, to which the sensor is attached, is grounded or not. While a new machine installation can be isolated, this can change over the life of the machine as wear occurs, maintenance is performed, and other changes are made.

Regardless the source, when present these signals or noise can result in significant error in measurements, which could result in random and inexplicable machine alarms and trips, erroneous condition assessment / diagnosis, and possible damage to the instrumentation. If the source of the noise is clear, and there is only one concern, then the corrective action is clear, depending on the source of the problem, try the following:

## EMI

Ground the shield at both ends of the cable.

- If you tie the shield to the sensor case only, it creates a ground if the structure that the sensor is mounted on is grounded. If the bearing housing or the machine is isolated from ground, then when you connect the shield to the case of the sensor cannot ground the shield.
- If the ground potential through the sensor is different than ground potential through the instrumentation ground, then a ground loop is created. The ground loop that is created can be a worse condition than the EMI problem.
- In most cases, grounding the shield at both ends must be the last resort because ground loop problems can result. The ground loop problems can create more significant problems than the EMI issue. Make sure that the following common wiring solutions are considered:
  - Use high quality, well shielded, twisted wire cable.
  - Route cable runs to avoid obvious / strong sources of EMI such as radio transmission towers, generators, and transformers.
  - If cables are routed through a J-box, make sure that shields are properly connected.
  - When routing cables, make sure to cross AC power lines at right angles. Approach AC motors from a right angle to the motor shaft and do not route wiring alongside a motor.
  - At the monitor, connect the shield wires directly to ground - so do not ground it through the instrument.

## Ground Loops

Isolate the shield at one end of the cable.

- In most cases, make sure that the shield is not connected to the sensor.
- A special cable or a custom made cable is required for accelerometers with two or three pin MIL-C-5015 connectors.
- For existing installations, do not assume that the shield is not tied to the sensor case. While not connected to the sensor case is normal practice, in most locations, it doesn't mean that it is that way. Also, if the shield is connected to the sensor case, it can be that the structure the sensor is mounted on has changed in respect to the ground for other reasons.
- If continuous or intermittent sources of EMI (RFI) are present, then when you isolate one end of the shield it creates an antenna that can result in EMI (RFI) noise problems. An EMI (RFI) issue can be a worse condition than the ground loop problem.

## Sensor Quick Reference

The 1443 Series sensors are summarized in this section. Each sensor is listed with only its major characteristics for easy comparison and quick selection.

### General-purpose Accelerometers

General-purpose, industrial accelerometers are recommended for permanent installation onto machinery or route-based vibration data collection in predictive maintenance and condition monitoring applications.

**Table 1 - General Purpose Accelerometers**

Purpose	Cat. No	Features	Page
General Purpose Accelerometer	1443-ACC-GP-T	<ul style="list-style-type: none"> <li>• 100 mV/g</li> <li>• 0.8...19 kHz</li> <li>• Top Exit</li> </ul>	13
	1443-ACC-GP-S	<ul style="list-style-type: none"> <li>• 100 mV/g</li> <li>• 0.2...15 kHz</li> <li>• Side Exit</li> </ul>	15
General Purpose Accelerometer (with Integral Cable)	1443-ACC-GP-T16-SI	<ul style="list-style-type: none"> <li>• Integral ~5 m (16 ft) Cable</li> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• Top Exit</li> </ul>	17
	1443-ACC-GP-T32-SI	<ul style="list-style-type: none"> <li>• Integral ~10 m (32 ft) Cable</li> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• Top Exit</li> </ul>	19
	1443-ACC-GP-T16-SC	<ul style="list-style-type: none"> <li>• Integral ~5 m (16 ft) Cable</li> <li>• Shield Case Grounded Cable<sup>(1)</sup></li> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• Top Exit</li> </ul>	21
	1443-ACC-GP-T32-SC	<ul style="list-style-type: none"> <li>• Integral ~10 m (32 ft) Cable</li> <li>• Shield Case Grounded Cable<sup>(1)</sup></li> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• Top Exit</li> </ul>	23

(1) Sensors with the shield wire grounded to the case are non-standard. See [Shield Wire Isolation Sensor and Cable Selection on page 8](#) before ordering.

## Sensors with Integral Cables

Included in the list of 1443 Series general-purpose Accelerometers are variants of the sensor that include integral 4.8 m (16 ft) and 9.7 m (32 ft) cables. Sensors with an integrated cable are useful in wet or dirty (high particulate) areas.

### Low Frequency Accelerometer

This accelerometer combines low-frequency response with high-output sensitivity to obtain the resolution characteristics and output signal levels necessary for low-frequency measurements and analysis.

**Table 2 - Low Frequency Accelerometer**

Purpose	Cat. No	Features	Page
Low Frequency Accelerometer	1443-ACC-LF-T	<ul style="list-style-type: none"> <li>• 500 mV/g</li> <li>• 1.5...10khz (5%)</li> <li>• 0.1...15khz (3db)</li> <li>• Top Exit</li> </ul>	25

### High Frequency Accelerometer

When you test, monitor vibrations, and analyze the frequency of machinery where frequencies greater than approximately 15 kHz, the frequencies must be measured.

**Table 3 - High Frequency Accelerometer**

Purpose	Cat. No	Features	Page
High Frequency Accelerometer	1443-ACC-HF-T	<ul style="list-style-type: none"> <li>• 50 mV/g</li> <li>• 0.8...20 kHz</li> <li>• Top exit</li> </ul>	27

### Specialty Accelerometers

These sensors are available for applications that require velocity output and temperature output from the sensor.

- Velocity Output
- Acceleration and Temperature

**Table 4 - Specialty Accelerometers**

Purpose	Cat. No	Features	Page
Velocity Output Accelerometer	1443-ACC-VO-T	<ul style="list-style-type: none"> <li>• Output is integrated to velocity</li> <li>• 100 mV/ips</li> <li>• 2...6 kHz</li> <li>• Output <math>\pm 50</math> in/s</li> <li>• Top Exit</li> </ul>	29
Velocity Output Accelerometer	1443-ACC-VO-S	<ul style="list-style-type: none"> <li>• Output is integrated to velocity</li> <li>• 100 mV/ips</li> <li>• 2...6 kHz</li> <li>• Output <math>\pm 50</math> in/s</li> <li>• Side Exit</li> </ul>	31
Combination Acceleration and Temperature	1443-ACC-AT-T	<ul style="list-style-type: none"> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• 10 mV/<math>^{\circ}</math>C</li> <li>• Top Exit</li> </ul>	33
Combination Acceleration and Temperature	1443-ACC-AT-S	<ul style="list-style-type: none"> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• 10 mV/<math>^{\circ}</math>C</li> <li>• Side Exit</li> </ul>	35

## Intrinsically Safe Accelerometers

Intrinsically safe sensors meet additional requirements for hazardous environments. See specification tables for a list of certifications.

**Table 5 - Intrinsically Safe Accelerometers**

Purpose	Cat. No	Features	Page
Hazardous Area Accelerometer	1443-ACC-IS-T	<ul style="list-style-type: none"> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• Top Exit</li> </ul>	37
	1443-ACC-IS-S	<ul style="list-style-type: none"> <li>• 100 mV/g</li> <li>• 0.8...15 kHz</li> <li>• Side Exit</li> </ul>	39

## Metric and Imperial Mounting

Sensor mounting accessories are included with the accelerometer, see Supplied Accessories in the specification tables. Options exist to mount the sensor on the machine end - either in Metric or Imperial units, as denoted by the 'Mounting Thread' attribute in the following tables for each sensor.

Top exit sensors have a 1/4-28 UNF female thread on the sensor end. Two studs are included, both with one 1/4-28 UNF male end (for the sensor). The other end has either an M8 x 1.25 mm male thread or a 1/4-28 UNF male thread for mounting on the machine.

Side exit sensors have a through hole. Bolts are included with a machine mounting thread of either M6 x 1.00 mm male or 1/4-28 UNF male.

## Sensors

### 1443-ACC-GP-T Accelerometer

Table 6 - 1443-ACC-GP-T Accelerometer Specifications

Attribute	Value	
<b>Performance</b>		
Sensitivity ( $\pm 10\%$ ) <sup>(1)</sup>	10.2 mV/(m/s <sup>2</sup> )	100 mV/g
Measurement range	$\pm 785 \text{ m/s}^2$	$\pm 80 \text{ g}$
Frequency range ( $\pm 5\%$ ) <sup>(2)</sup>	2.0...14 kHz	120...840000 cpm
Frequency range ( $\pm 3 \text{ dB}$ )	0.8...19 kHz	48...1140000 cpm
Resonant frequency, typical	28 kHz	1680 kcpm
Broadband resolution (1...10000 Hz), typical	2943 $\mu\text{m/s}^2$	300 $\mu\text{g}$
Non-linearity <sup>(3)</sup>	$\pm 1\%$	$\pm 1\%$
Transverse sensitivity	< 5%	< 5%
<b>Environmental</b>		
Overload limit (shock)	49050 m/s <sup>2</sup> pk	5000 g pk
Temperature range	-55...+140 °C	-67...+284 °F
Enclosure Rating	IP66 to 68, depending upon the cable assembly used.	IP66 to 68, depending upon the cable assembly used.
<b>Electrical</b>		
Settling time (within 1% of bias)	< 2.0 s	< 2.0 s
Discharge time constant	$\geq 0.5 \text{ s}$	$\geq 0.5 \text{ s}$
Excitation voltage	18...28V DC	18...28V DC
Constant current excitation	2...20 mA	2...20 mA
Output impedance	<150 Ω	<150 Ω
Output bias voltage	10...12V DC	10...12V DC
Electrical isolation (case)	$> 10^{10} \Omega$	$> 10^{10} \Omega$
Electrical protection	500V	500V
<b>Physical</b>		
Size (hex x height)	19x36 mm	3/4 x 1.42 in.
Weight, approx.	48 g	1.7 oz
Mounting thread <sup>(4)</sup>	M8 x 1.25 mm male	1/4-28 UNF male
Mounting torque	8 N·m	6 ft·lb
Sensing element	Ceramic	
Sensing geometry	Shear	
Housing material	Stainless Steel	
Sealing	Welded hermetic	
Electrical connector	Two-pin-MIL-C-5015	
Electrical connector position	Top	
Supplied Accessories <sup>(5)</sup>	1443-STD-0-0	
	1443-STD-0-M8	
	Calibration Certificate	

(1) Conversion factor 1 g = 9.81 m/s<sup>2</sup>.

(2) Hz = 60 cpm (cycles per minute).

(3) Zero-based, least-squares, straight-line method.

(4) 1/4-28 UNF has no equivalent in metric units.

(5) Calibration @80 Hz per ISO 9001-2008

Settling time (within 1% of bias)	< 2.0 s	< 2.0 s
Discharge time constant	$\geq 0.5 \text{ s}$	$\geq 0.5 \text{ s}$
Excitation voltage	18...28V DC	18...28V DC
Constant current excitation	0.5...8 mA	0.5...8 mA
Output impedance	<150 $\Omega$	<150 $\Omega$
Output bias voltage	10...12V DC	10...12V DC
Electrical isolation (case)	> $10^{10} \Omega$	> $10^{10} \Omega$
Electrical protection	500V	500V
<b>Physical</b>		
Size (hex x height)	19 x 36 mm	3/4 x 1.42 in.
Weight, approx.	48 g	1.7 oz
Mounting thread <sup>(4)</sup>	M8 x 1.25 mm male	1/4-28 UNF male
Mounting torque	8 N·m	6 ft·lb
Sensing element	Ceramic	
Sensing geometry	Compression	
Housing material	Stainless Steel	
Sealing	Welded hermetic	
Electrical connector	Two-pin MIL-C-5015	
Electrical connector position	Top	
Cable Length	5 m	16 ft
Cable Type	Shielded Silicone	
Cable Grounding	Shield Case Grounded	
Supplied Accessories <sup>(5)</sup>	1443-STD-0-0	
	1443-STD-0-M8	
	ICS-3 3 pt calibration	

(1) Conversion factor 1 g = 9.81 m/s<sup>2</sup>.

(2) 1 Hz = 60 cpm (cycles per minute).

(3) Zero-based, least-squares, straight-line method.

(4) 1/4-28 UNF has no equivalent in metric units.

(5) ICS-3 3 pt calibration 10 Hz, 100 Hz, 1 kHz.

## 1443-ACC-IS-S Accelerometer

**Table 19 - 1443-ACC-IS-S Accelerometer Specifications**

Attribute	Value	
<b>Performance</b>		
Sensitivity ( $\pm 10\%$ ) <sup>(1)</sup>	10.2 mV/(m/s <sup>2</sup> )	100 mV/g
Measurement range	$\pm 785 \text{ m/s}^2$	$\pm 80 \text{ g}$
Frequency range ( $\pm 5\%$ ) <sup>(2)</sup>	2.0...10 kHz	120...600000 cpm
Frequency range ( $\pm 3 \text{ dB}$ )	0.8...15 kHz	48...900000 cpm
Resonant frequency, typical	22 kHz	1500 kcpm
Broadband resolution (1...10000 Hz), typical	491 $\mu\text{m/s}^2$	50 $\mu\text{g}$
Non-linearity <sup>(3)</sup>	$\pm 1\%$	$\pm 1\%$
Transverse sensitivity	< 5%	< 5%
<b>Environmental</b>		
Overload limit (shock)	49050 m/s <sup>2</sup> pk	5000 g pk
Temperature range	-55...+110 °C	-67...+230 °F
Enclosure rating	IP66 to 68, depending upon the cable assembly used.	IP66 to 68, depending upon the cable assembly used.
<b>Electrical</b>		
Settling time (within 1% of bias)	< 2.0 s	< 2.0 s
Discharge time constant	$\geq 0.5 \text{ s}$	$\geq 0.5 \text{ s}$
Excitation voltage	18...28V DC	18...28V DC
Constant current excitation	...	2...20 mA
Output impedance	<150 $\Omega$	<150 $\Omega$
Output bias voltage	10...12V DC	10...12V DC
Electrical isolation (case)	$> 10^{10} \Omega$	$> 10^{10} \Omega$
Electrical protection	500V	500V
<b>Physical</b>		
Size (hex x height)	25 x 30 x 35 mm	1 x 1.18 x 1.38 in
Weight, approx.	170 g	6.0 oz
Mounting thread <sup>(4)</sup>	M6 x 1 mm male	1/4-28 UNF male
Mounting torque	8 N•m	6 ft•lb
Sensing element	Ceramic	
Sensing geometry	Compression	
Housing material	Stainless Steel	
Sealing	Welded hermetic	
Electrical connector	Two-pin MIL-C-5015	
Electrical connector position	Side	
Supplied Accessories <sup>(5)</sup>	1443-BLT-125-0	
	1443-BLT-125-M6	
	ICS-3 3 pt calibration	

(1) Conversion factor 1 g = 9.81 m/s<sup>2</sup>

(2) 1 Hz = 60 cpm (cycles per minute).

(3) Zero-based, least-squares, straight-line method.

(4) 1/4-28 UNF has no equivalent in metric units.

(5) ICS-3 3 pt calibration 10 Hz, 100 Hz, 1 kHz.

## Accessories

This section describes the accessories that are available for the sensors.

### Cables

These are the cables that are available for the two-pin sensors.

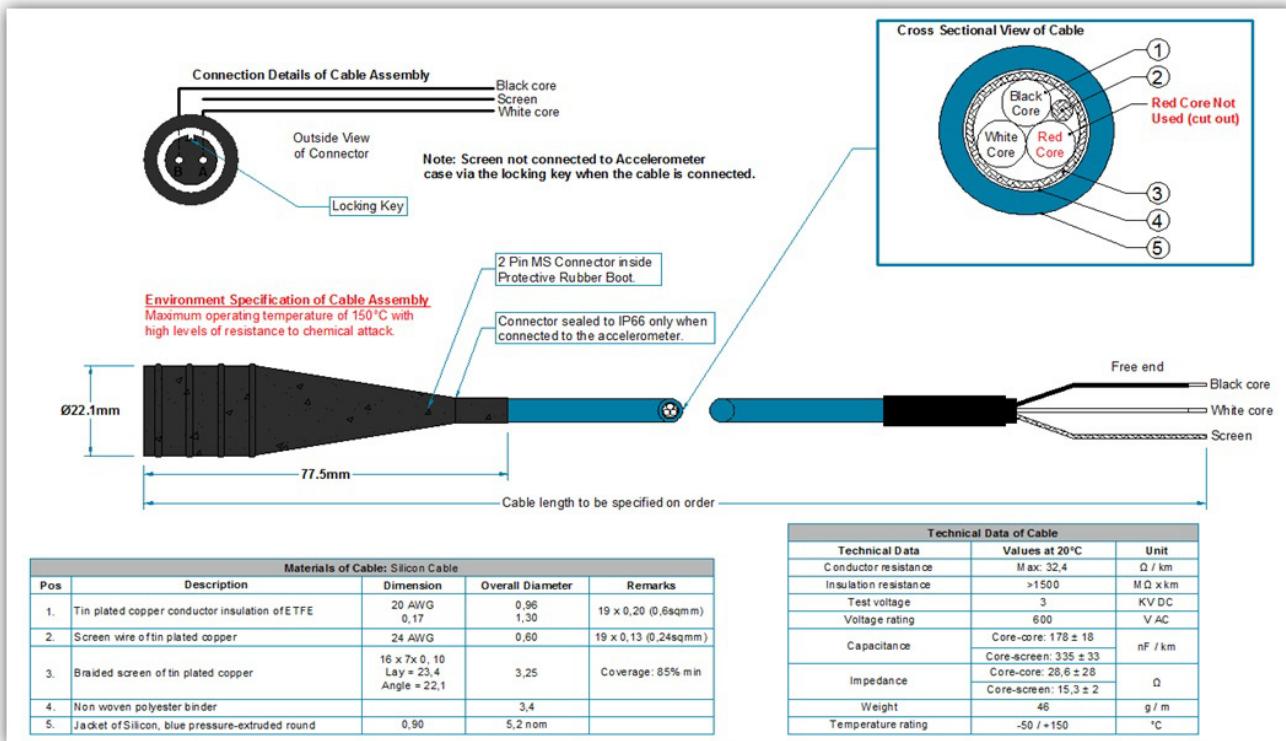

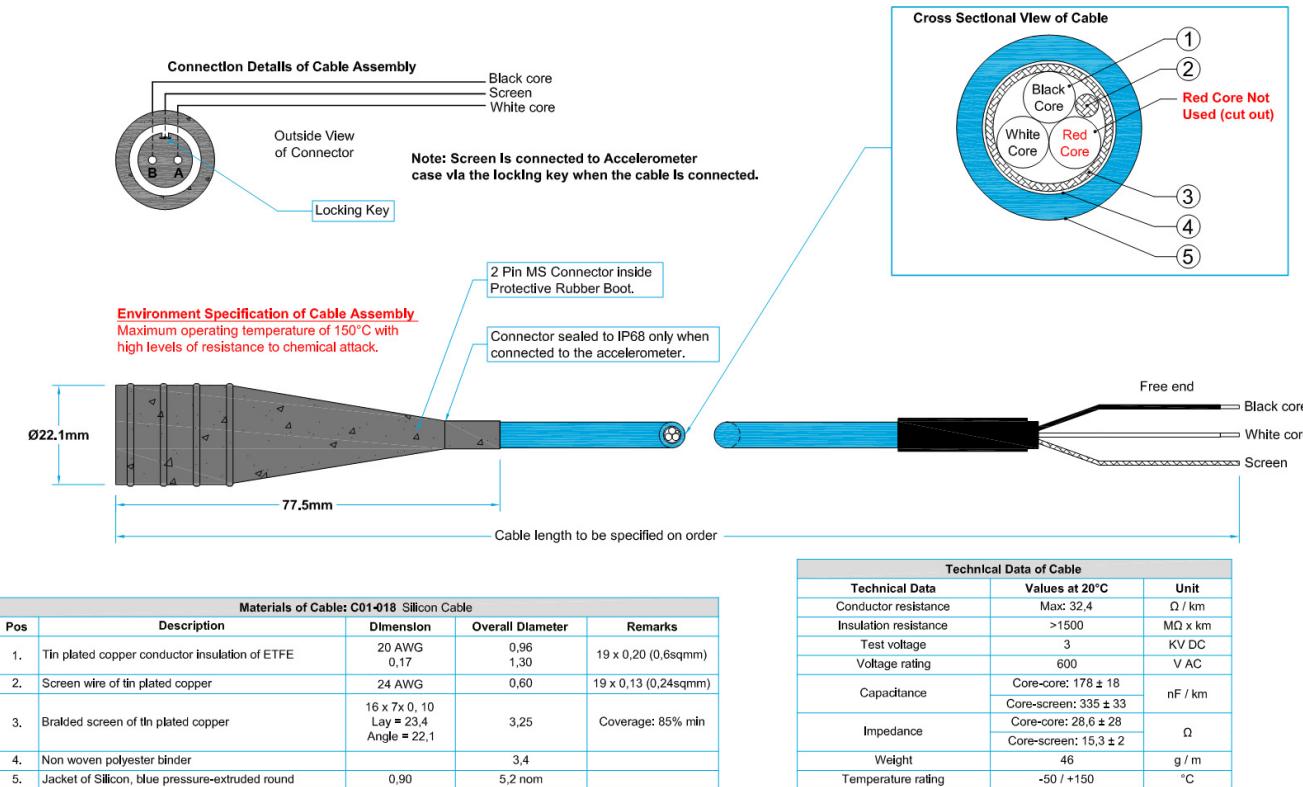

**Table 21 - Cables for Two-Pin Sensors**

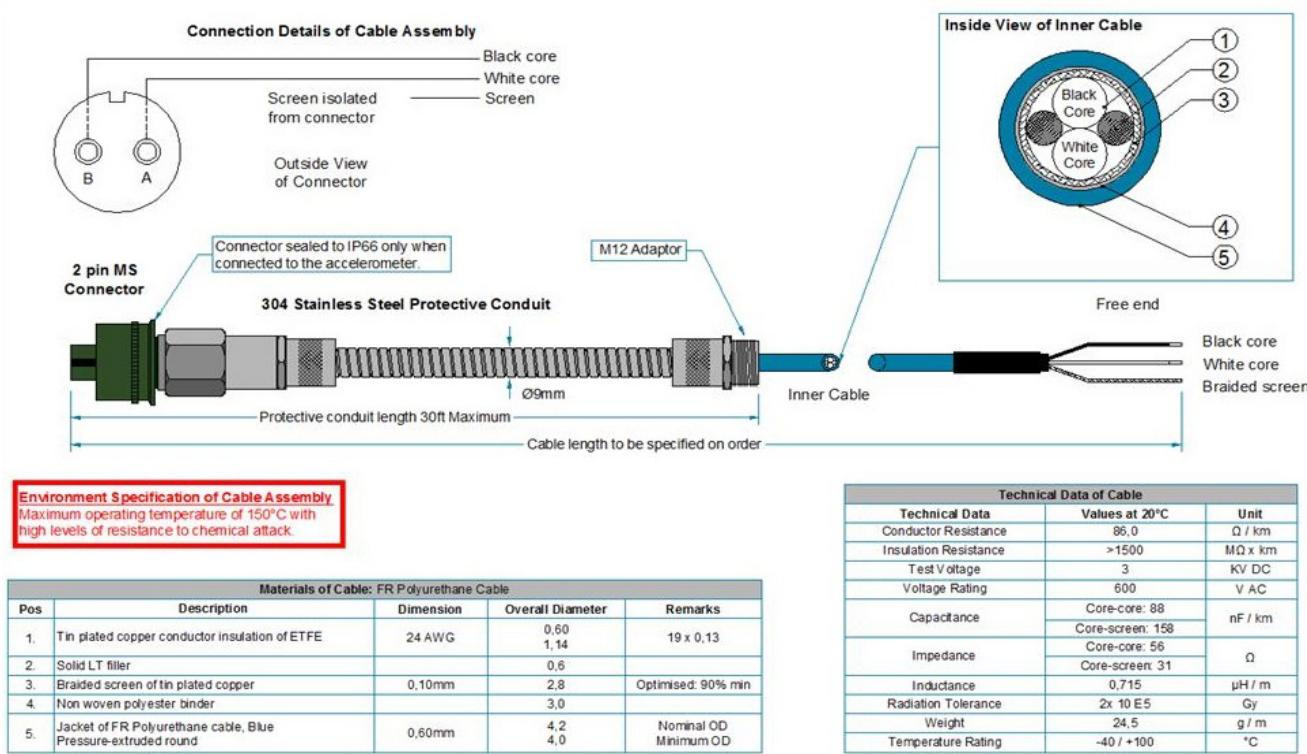

Catalog Number	Description
1443-CBL-MS2IBC-16S	16 feet of silicone twisted shielded pair cable w/ molded 2-pin MIL connector and terminated to blunt cut, shield isolated from the connector
1443-CBL-MS2IBC-32S	32 feet of silicone twisted shielded pair cable w/ molded 2-pin MIL connector and terminated to blunt cut, shield isolated from the connector
1443-CBL-MS2IBC-64S	64 feet of silicone twisted shielded pair cable w/ molded 2-pin MIL connector and terminated to blunt cut, shield isolated from the connector
1443-CBL-MS2GBC-16S	16 feet of silicone twisted shielded pair cable w/ molded 2-pin MIL connector and terminated to blunt cut, shield grounded to the connector <sup>(1)</sup>
1443-CBL-MS2GBC-32S	32 feet of silicone twisted shielded pair cable w/ molded 2-pin MIL connector and terminated to blunt cut, shield grounded to the connector <sup>(1)</sup>
1443-CBL-MS2GBC-64S	64 feet of silicone twisted shielded pair cable w/ molded 2-pin MIL connector and terminated to blunt cut, shield grounded to the connector <sup>(1)</sup>
1443-CBL-MS2IBC-50A	50 feet of stainless steel armored jacket over polyurethane twisted shielded pair cable w/ 2-pin MIL (AM) connector and terminated to blunt cut, shield isolated from the connector

(1) Cables with the shield grounded to the connector are non-standard. See [Shield Wire Isolation Sensor and Cable Selection on page 8](#) before ordering.

**TIP**

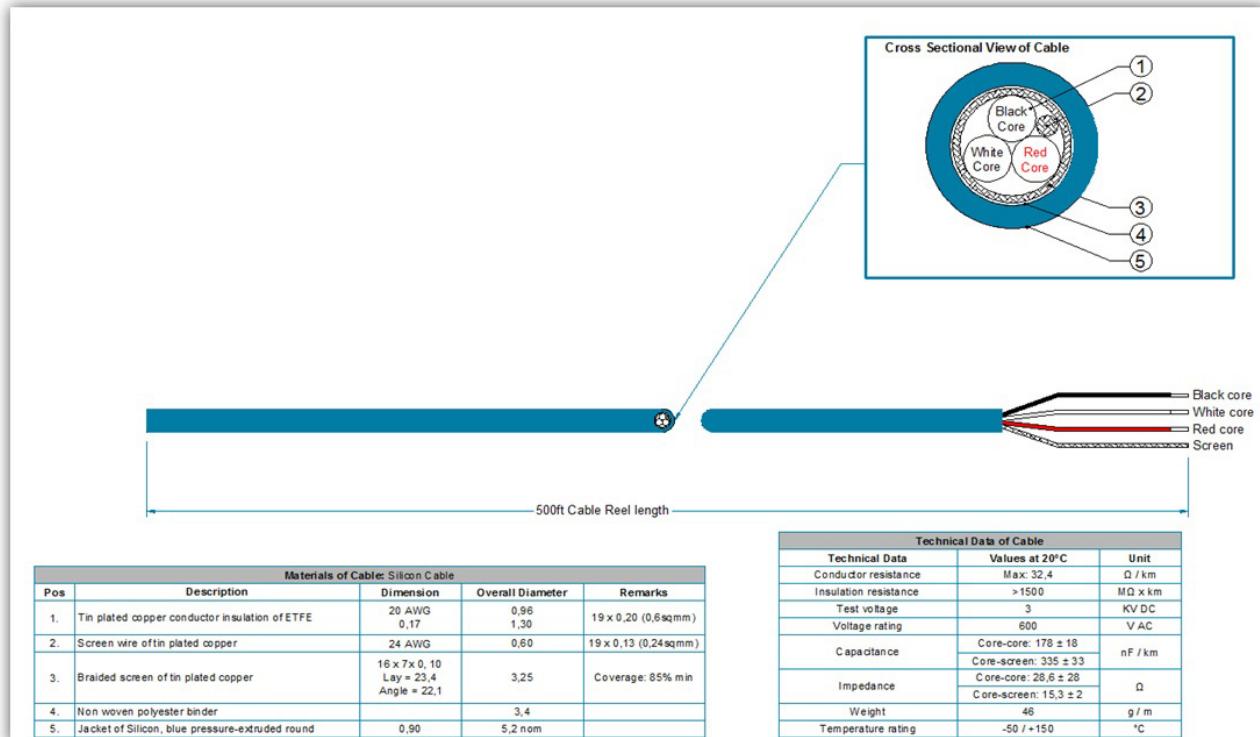

Before selecting a 'GBC' version cable, see [Shield Wire Isolation Sensor and Cable Selection on page 8](#).

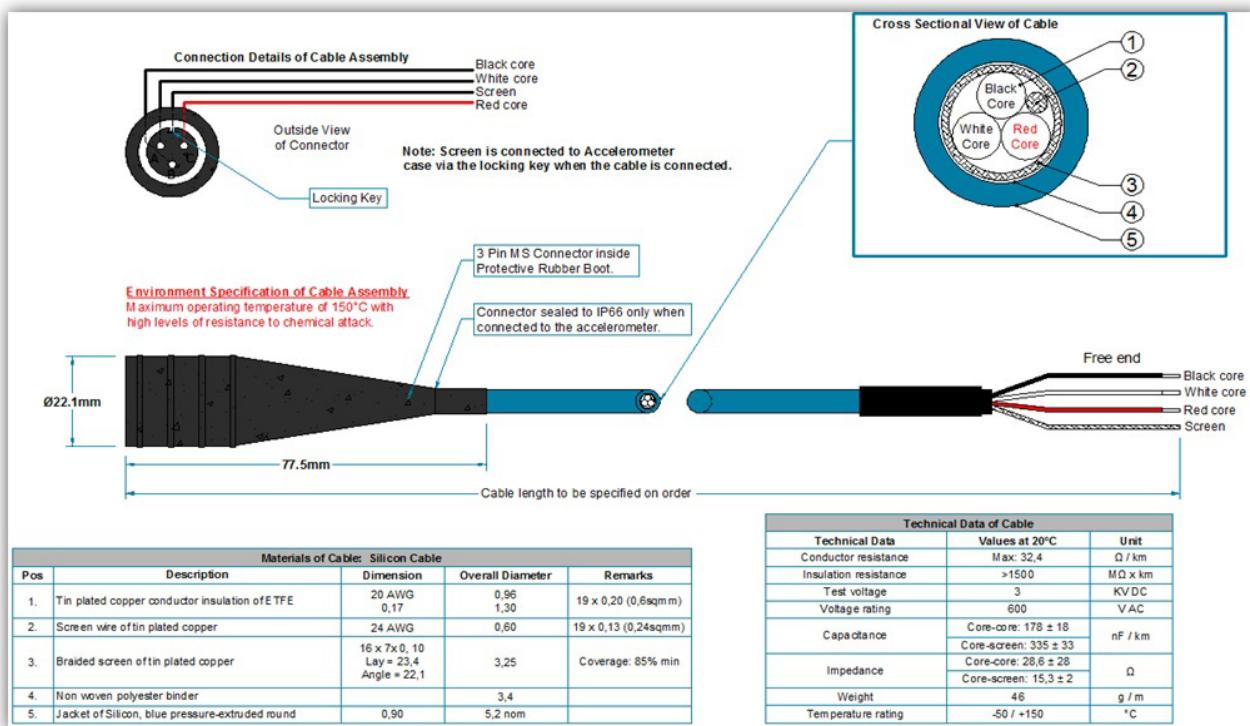

**Figure 32 - 1443-CBL-MS2IBC****Figure 33 - 1443-CBL-MS2GBC**

**Figure 34 - 1443-MS2IBC-50A**

**Table 22 - Cables for Three-Pin Sensors**

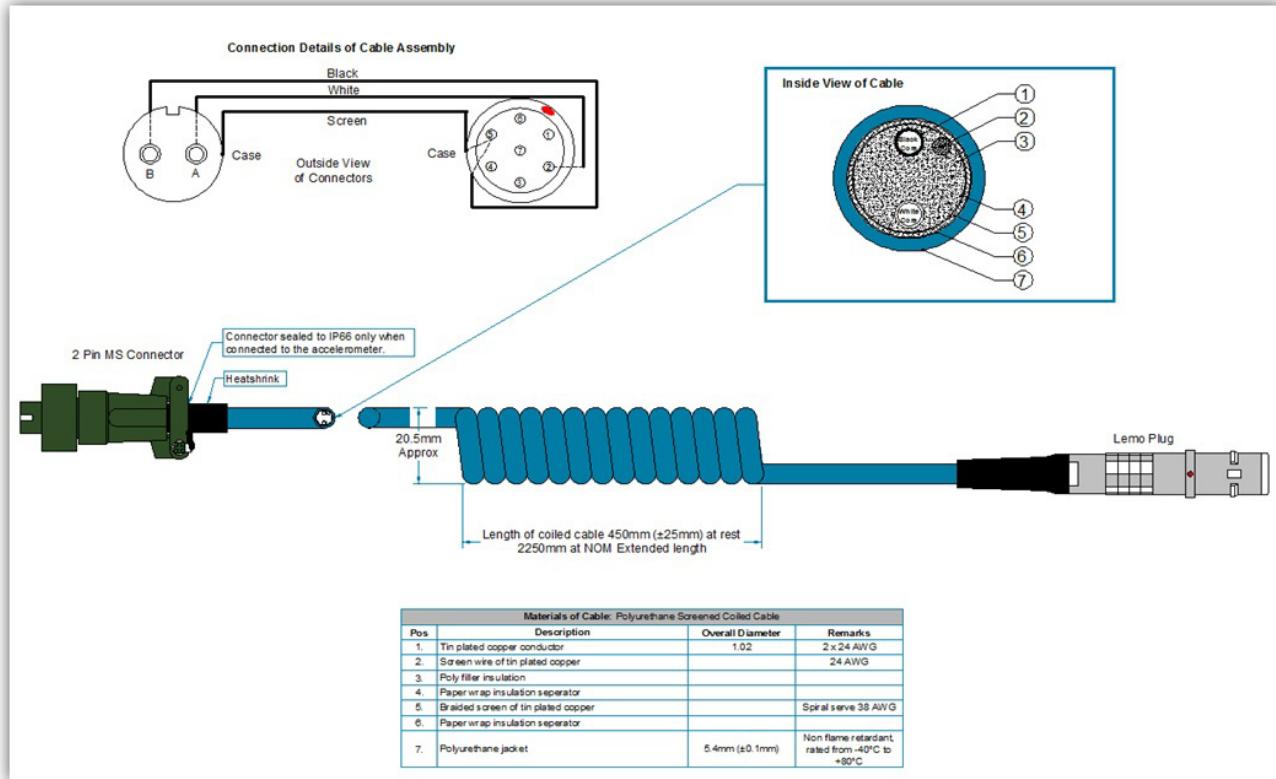

Catalog Number	Description
1443-CBL-BC3BC-500	Bulk spool of 500 feet of silicone twisted shielded 3-conductor cable
1443-CBL-MS3IBC-16S	16 feet of silicone twisted shielded 3-conductor cable w/ molded 3-pin MIL connector and terminated to blunt cut, shield isolated from the connector
1443-CBL-MS3IBC-64S	64 feet of silicone twisted shielded 3-conductor cable w/ molded 3-pin MIL connector and terminated to blunt cut, shield isolated from the connector
1443-CBL-MS3IBC-112S	112 feet of silicone twisted shielded 3-conductor cable w/ molded 3-pin MIL connector and terminated to blunt cut, shield isolated from the connector

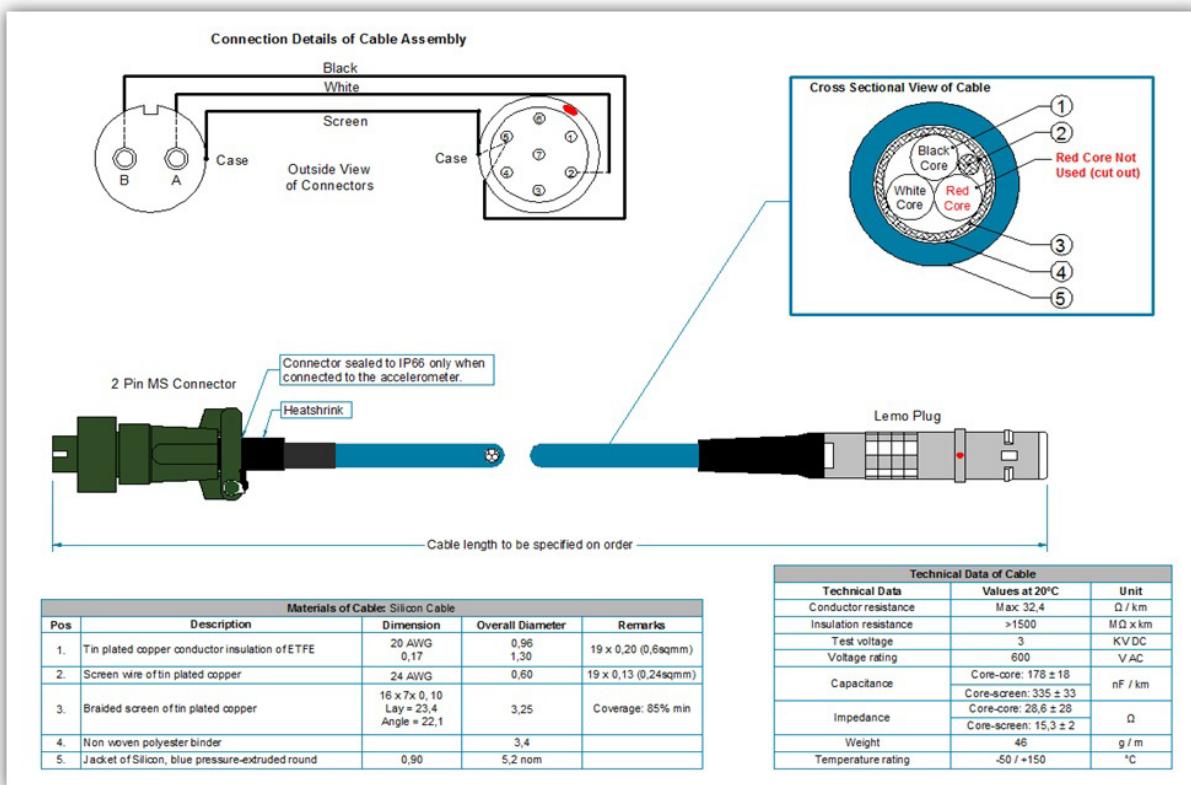

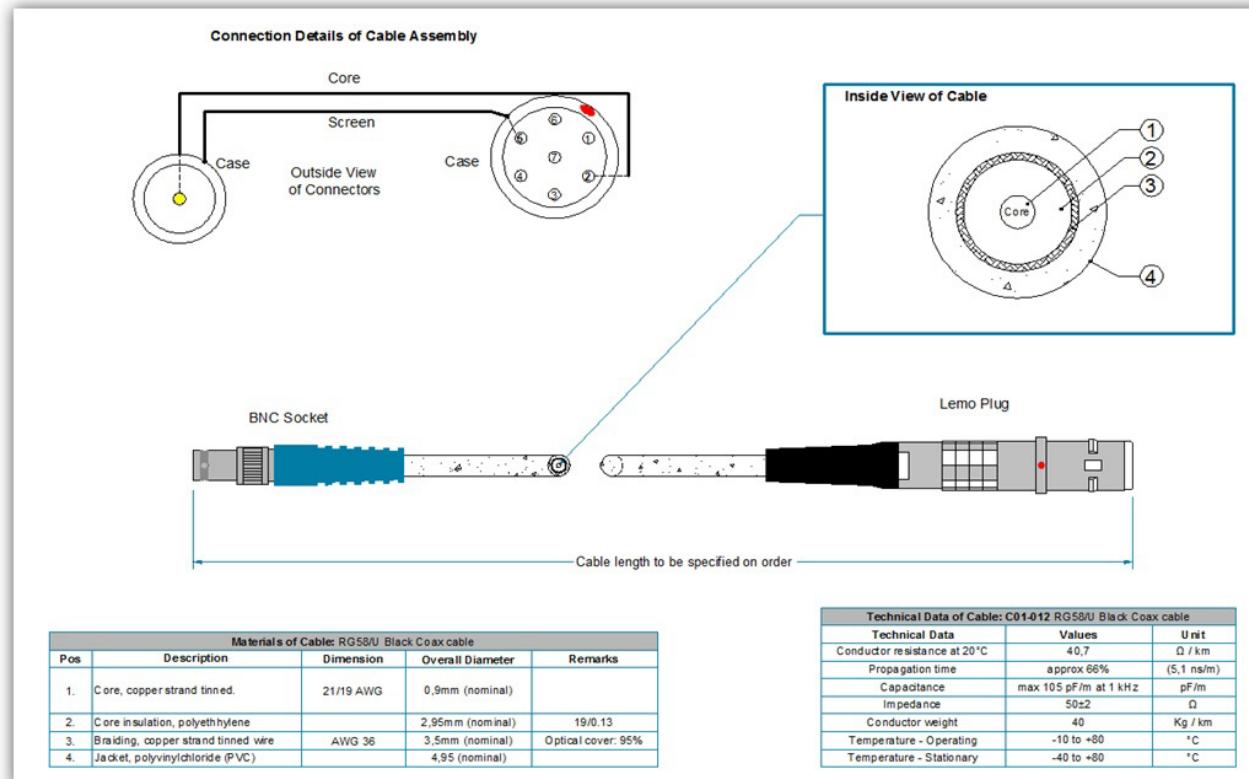

**Figure 35 - 1443-CBL-BC3BC-500**

**Figure 36 - 1443-CBL-MS3IBC (All lengths)**

**Table 23 - Adapter Cables**

Catalog Number	Description
1443-CBL-MSILM-6	Coiled data collector sensor cable, 2 pin MS to lemo, top
1443-CBL-MSILM-50	50 feet, data collector balancing cable, 2 pin MS to lemo, top
1443-CBL-LMBNC-1	1 foot, lemo to BNC adapter

**Figure 37 - 1443-CBL-MSILM-6**

**Figure 38 - 1443-CBL-MSILM-50****Figure 39 - 1443-CBL-LMBNC-1**

## Connectors

**Table 24 - Connectors**

Catalog Number	Description
1443-CON-MS2-SP	Qty 5: silicon boot, splash proof, push on: 2 pin MS, top exit
1443-CON-MS3-SP	Qty 5: silicon boot, splash proof, push on: 3 pin MS, top exit

**Figure 40 - 1443-CON-MS2-SP & 1443-CON-MS3-SP**

## Mounting Accessories

**Table 25 - Mounting Accessories**

Catalog Number	Description
1443-MAG-075C-14 <sup>(1)</sup>	3/4" diameter curved surface magnet (14 lb pull, 1/4-28)
1443-MAG-075F-15 <sup>(1)</sup>	3/4" diameter flat surface-magnet (15 lb pull, 1/4-28)
1443-MAG-100C-35 <sup>(1)</sup>	1" diameter curved surface-magnet (35 lb pull, 1/4-28)
1443-MAG-100F-35 <sup>(1)</sup>	1" diameter flat surface-magnet (35 lb pull, 1/4-28)
1443-MAG-150C-55 <sup>(1)</sup>	1"-1/2" diameter curved surface-magnet (55 lb pull, 1/4-28)
1443-MAG-150F-50 <sup>(1)</sup>	1"-1/2" diameter flat surface-magnet (50 lb pull, 1/4-28)
1443-STD-0-0	Mounting Stud - 1/4-28 to 1/4-28
1443-STD-0-M8	Mounting Stud - 1/4-28 to M8
1443-BLT-125-M6	Through bolt - M6
1443-BLT-125-0	Through bolt - 1/4-28
1443-PRB-40	Probe tip 4" length, 1/2" hex tapered to point (1/4-28)
1443-PRB-90	Probe tip 9" length with 1/4-28 stud, aluminum
1443-PAD-075-0	Mounting pad 1/4-28

(1) Magnet material: Neodymium-Iron-Boron (NdFeB)

Figure 41 - 1443-MAG (Representative of all sizes) - Left: Curved Surface, Right: Flat Surface

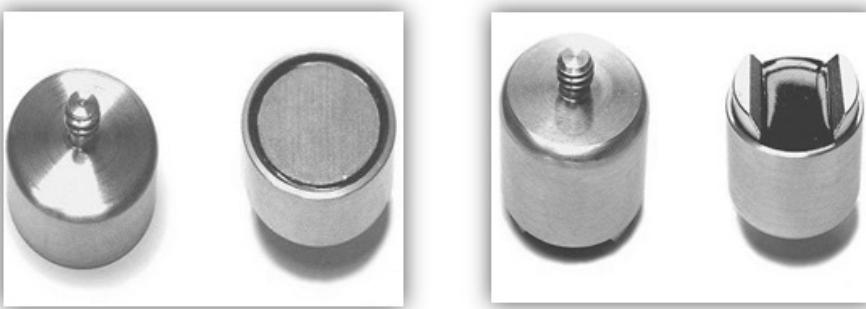

Figure 42 - 1443-STD-0-0

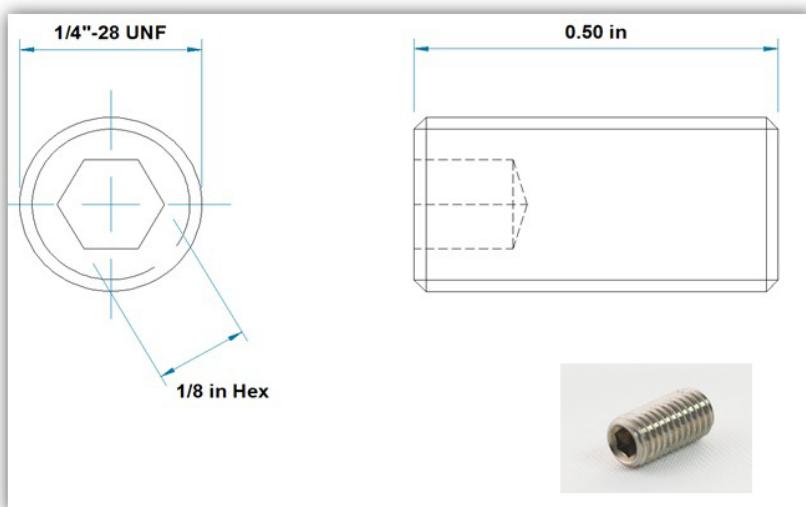

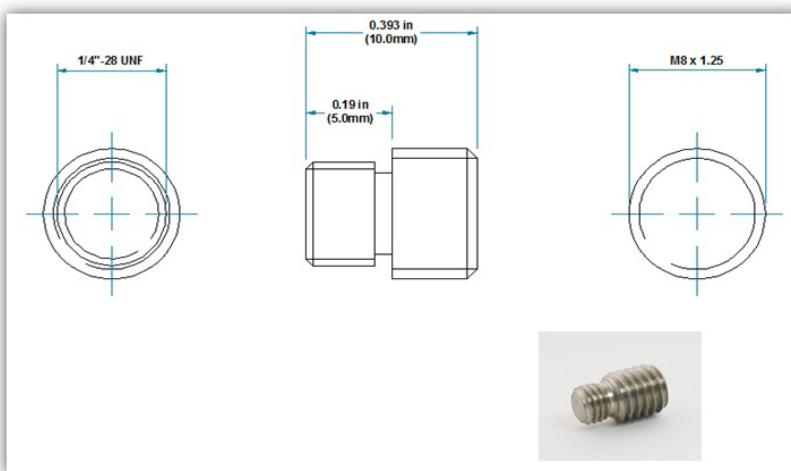

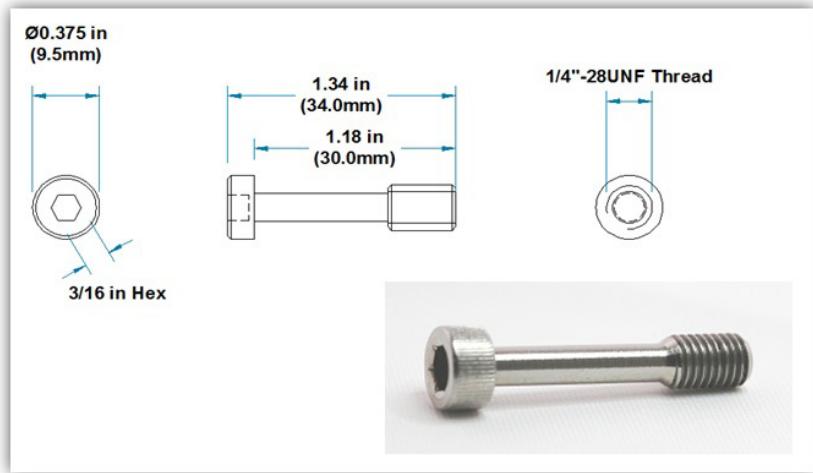

Figure 43 - 1443-STD-0-M8

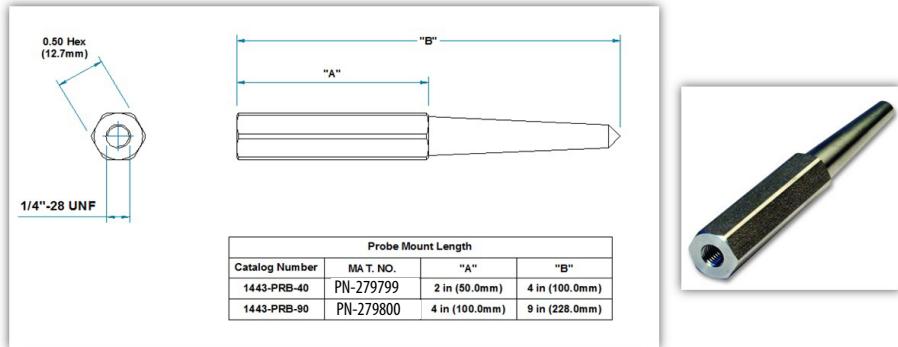

**TIP** Through bolt cannot be used with EK 9000 Series side exit sensors.

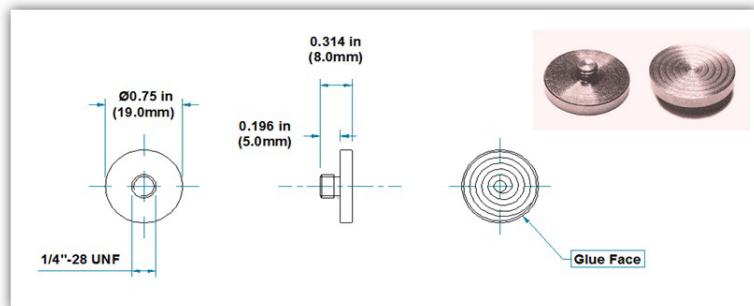

**Figure 44 - 1443-BLT-125-M6**

**Figure 45 - 1443-BLT-125-0**

**Figure 46 - 1443-PAD**

**Figure 47 - 1443-SFT-125 (Representative for all)**

## Spotface Tool Kits

**Table 26 - Accessory Spotface Tool Kit**

Catalog Number	Description
1443-SFT-125-0	Spotface tool kit for sensor mounting, 1.25" diameter, 1/4-28 pilot, 2 Drill Bits, 3 Taps, Tap Wrench, Allen Wrench, Case
1443-SFT-125-M6	Spotface tool kit for sensor mounting, M6 pilot, 2 Drill Bits, 3 Taps, Tap Wrench, Allen Wrench, Case
1443-SFT-125-M8	Spotface tool kit for sensor mounting, M8 pilot, 2 Drill Bits, 3 Taps, Tap Wrench, Allen Wrench, Case

## Data Collector Sensor Kit

**Table 27 - Data Collector Sensor Kit**

Catalog Number	Description
1443-KIT-DATACLTR0	Includes one 1443-ACC-GP-T Accelerometer, one 1443-CBL-MSILM-6 coiled cable, one 1443-MAG-075F-15 magnet mount

## EK 9000 Series Compatibility

1443 Series cables and accessories are compatible with EK 9000 Series sensors except for the side exist sensor through bolts. Through bolts 1443-BLT-125-M6 and 1443-BLT-125-0 cannot be used with EK 9000 Series sensors.

- For cables, make sure to choose the same type of cable, two pin or three pin, shield isolated (all EK 9000 Series cables are shield isolated) cable.
- For mounting accessories, make sure to match the thread size.

See the [Sensor Cross-reference - 1443 Series \(new\) to 9000 Series \(old\) on page 55](#), to identify equivalent 1443 Series sensors.

## Sensor Cross-reference - 1443 Series (new) to 9000 Series (old)

The EK Series sensor line is marked Rockwell Automation®. They are legacy products from Entek. The current sensors are sourced from PCB/IMI in the U.S. but earlier versions of the same sensors were sourced from Wilcoxon Research or were manufactured by IRD.

The 1443 Series are Allen-Bradley® branded products that are sourced from Hansford Sensors in the UK.

This project simplifies the offering from about 58 EK catalogs, including 26 sensors, to a total of 47 catalogs and just 14 sensors.

**TIP** The 1443 Series do not include specialty high temperature sensors or proportional output (4-20 mA) "process" sensors. These capabilities are no longer offered.

**Table 28 - Sensor Cross-reference - 1443 Series (New) to 9000 Series (Old)**

EK-48964	9842VCRT Hazardous Process Accelerometer
EK-43805I	9100T High Temperature Accelerometer
EK-43807I	9150HT High Temperature Accelerometer

## Additional Resources

These documents contain additional information concerning related products from Rockwell Automation.

Resource	Description
Dynamix 1443 Series Sensors Product Information, publication <a href="#">1443-PC001</a>	Included with hazardous area rated sensors, provides basic environmental, ratings and mounting information.
Dynamix 1443 Series Sensors User Manual, publication <a href="#">1443-UM001</a>	Provides complete information for mounting and cabling 1443 Series sensors.
Industrial Automation Wiring and Grounding Guidelines, publication <a href="#">1770-4.1</a>	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Certifications website, <a href="http://www.ab.com">http://www.ab.com</a>	Provides declarations of conformity, certificates, and other certification details.

You can view or download publications at <http://www.rockwellautomation.com/literature/>. To order paper copies of technical documentation, contact your local Allen-Bradley distributor or Rockwell Automation sales representative.

## **Important User Information**

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.

Activities including installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice.

If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

## **Documentation Feedback**

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication [RA-DU002](#), available at <http://www.rockwellautomation.com/literature/>.

Rockwell Automation maintains current product environmental information on its website at
