NOTE: All circuit breakers on this chart are UL Listed and CSA Certified unless otherwise noted.

- [23]
 C60 are recognized components per UL 1077.

 [24]
 14 kA up to 35 A, 10 kA from 40 to 63 A.

 [25]
 14 kA up to 32 A, 10 kA from 40 to 63 A.

- For information regarding 30 corner grounded systems see the Supplemental Digest, Section 3. 10 kA up to 32 A, 5 kA from 40 to 63 A. [26]
- [27]
- [28] [29]
- Up to 35 A. 10 kA up to 35 A. 2 poles must be wired in series for 500 Vdc. Factory-installed option only. [30]
- [31]

NOTE: All circuit breakers on this chart are certified to UL and CSA standards unless otherwise noted.

2P in a 3P module. [32]

70-250 A with electronic trip system [33]

[34] Only two pole circuit breaker.

[35] Only two, three and four pole

[36] Not available with electronic trip units [37]

1P Available at 125 Vdc Dual UL and IEC ratings and CE markings on circuit breakers. For additional IEC ratings, see the Supplemental Digest, Section 10. Not available in HD and HG 2P rating (2P module). [38]

[39] 3P only.

[40] [41]

Not UL Listed due to wire bending space.

NOTE: All circuit breakers on this chart are certified to UL and CSA standards unless otherwise noted.

[42] I-Line Q-frame circuit breakers are available 70–225 A only. 250 A Q-frame unit-mount circuit breakers are limited to Cu conductors only.

[43] Not available with electronic trip units

[44] Ungrounded UPS systems only. See page 7-47. Special DC J-Frame only.

[45] Dual UL and IEC ratings and CE markings on circuit breakers. For additional IEC ratings, see the Supplemental Digest, Section 10.

For additional IEC ratings and OE mannings on broat breakers. For all For additional IEC ratings, see the Supplemental Digest Section 10. Requires circuit breaker with WB suffix. [46]

[47]

Factory-installed option only. [48]

Requires factory-installed "G" shunt trip and 3P module. [49]

[50] Enclosure rating 1, 3R, 5 and 12.,

MINIATURE AND MOLDED CASE CIRCUIT BREAKERS

[57] [58]

Tested to show arc flash hazard risk category as reference by NFPA70E. See Catalog 0613CT0001 for additional ratings and other information.

QO Standard Plug-On Circuit Breakers

QON load centers, NQ panelboards, NQ OEM interiors or Speed-D[™] switchboard distribution panels. Bolt-on QOB circuit breakers are for use in NQOB and NQ panelboards or interiors. [1]

The Square D exclusive Qwik-Open[™] mechanism, with a trip reaction within 1/60th of a second, is standard on all 1P 15 and 20 A QO circuit breakers.

OBS This product is obsolete.

Refer to page 7-2 for Interrupting Ratings, Accessories, and Dimensions.

- See Digest Section 1 for load centers and Section 9 for panelboards and interiors. [1]
- [2] 10-30 Å circuit breakers are suitable for use with 60°C or 75°C conductors. 35-125 A circuit breakers are suitable for use with 75°C conductors.
- [3] UL Listed 5 k AIR on corner grounded Delta systems.
- [4] UL Listed as HACR type for use with air conditioning, heating and refrigeration equipment haing motor group combinations and marked for use with HACR type circuit breakers.
- [5] UL Listed as SWD (switching duty) rated. Suitable for switching 120 Vac fluorescent lighting loads
- [6] Requires four spaces (1 AWG-300 kcmil Al/Cu.) Suitable for switching 120 Vac fluorescent lighting loads
- [7]
- Not suitable for use in 3Ø panels. Use only in 1Ø panel rated 150 A or greater. UL Listed for use ahead of QO, QO-GFI, QO-EPD, QOT, QO-AFI, and QO-PL 10 k AIR circuit breakers to permit their application at 22 kA fault level. [8]
- 100 A maximum branch mounted opposite [9]
- [10] Order only. Contact your local Field Office.

QOT and QO Tandem Circuit Breakers

QOT tandem circuit breakers have a mounting cam as shown. Installation into a QO load center can only be made in those positions having a mounting pan rail slot. Meets Paragraph 408.54 of the NEC[®]. UL Listed as Class CTL.

Table 7.5: QOT Tandem Circuit Breakers (CTL)-Not Compatible with Plug-on **Neutral Systems**

MINIATURE AND MOLDED CASE CIRCUIT BREAKERS [11] [12]

10-30 A circuit breakers are suitable for use with 60°C or 75°C conductors. 35-125 A circuit breakers are suitable for use with 75°C conductors.

UL Listed as HACR type for use with air conditioning, heating and refrigeration equipment haing motor group combinations and marked for use with HACR type circuit breakers. [13] Includes two circuit breakers (one QO2030 and one QO3020) and handle tie QOTHT.

1P QO-GFI

QO Arc-Fault Circuit Breaker (QO-CAFI)

QO arc-fault circuit breakers provide protection for Series and Parallel Type Arcing as required by the NEC and local code adoption, and comply with UL1699.

Table 7.7: QO-CAFI Circuit Breakers

QO Ground-Fault Circuit Breakers (GFI)

Qwik-Gard™ circuit breakers provide overload and short circuit protection, combined with Class A ground fault protection. Class A denotes a ground fault circuit interrupter that will trip when a fault current to ground is 6 mA or more, for people protection. Do not connect to more than 250 feet of load conductor for the total one-way run to prevent nuisance tripping.

Non-Automatic (Standard) Miniature Switches

Miniature non-automatic switches have the same physical packaging as miniature circuit breakers, but open only when the handle is switched to the OFF position.

Non-automatic switches provide no overcurrent protection or short circuit protection. They must not be used on systems that have an available fault current greater than the values listed in the table. Non-automatic switches are UL Listed per UL 1087 and are CSA certified.

[27] QOB circuit breakers with shunt trip, auxiliary switches, and/or alarm switches, which are no longer active commercial references, may be available Factory Assembled into NQ Panelboards.

[28] Also IEC rated and CE marked for IEC 60439-1. Use only Square D brand Type QOXC, QOXD, QOHX and QOE circuit breakers for 415Y/240 Vac max. systems.

QOU Miniature Circuit Breakers Supplementary Protectors

Class 720 / Refer to Catalog 0730CT9801

Low Ampere QOU

Low Ampere QOU Miniature Circuit Breakers

QOU unit mount miniature circuit breakers (cable-in/cable-out) are ideal for OEM applications. They have the Square D™ circuit breaker's unique Visi-Trip™ feature and can be DIN rail-mounted or surface- or flush-mounted using mounting feet. Mounting feet not provided [29].

General Specifications Common to All Low Ampere QOU Circuit Breakers

- · For convenient flush mount, surface mount or DIN mount
- (symmetrical rail 35 x 7.5 DIN/EN 50 022)
- Single handle with internal common trip ٠ Terminal lug wire size (1) 14-2 AWG Cu or Al
- ٠
- Reversible line and load lugs ٠ ٠
- Field-installable quick connectors • UL Listed 48 Vdc (5 k AIR)
- UL Listed as HACR Type: 10-70 A
- High magnetic trip circuit breakers (QOU-HM) are recommended for applications where high initial inrush may occur and for individual dimmer applications.
- For DIN mounting rails, see IEC Starters and Relays, Section 18.

High Ampere QOU Circuit Breakers

General Specifications Common to All High Ampere QOU Circuit Breakers

• Flush mount, surface mount, and DIN rail mount.

- Internal common trip.
- Non-reversible line and load lugs.
- Terminal lug wire size (1) 12-2/0 AWG Cu or Al.
- UL Listed 60 Vdc per pole (5 k AIR). (Note: except switches)
- UL Listed as HACR type, 80–125 Á.
- Non-automatic switches have the same physical packaging as miniature circuit breakers, but provide no overcurrent or short circuit protection. They are UL Listed per UL1087 and are CSA certified.

OBS This product is obsolete.

QOUQ Low Ampere Circuit Breakers

QOUQ low ampere circuit breakers with four-point quick-connect terminals are provided with permanent factory-installed terminals which are affixed to the Load or OFF end of the circuit breaker. This special terminal will accommodate up to four 1/4-inch insulated female quick connect wire terminations. Total ampacity of these connections must not exceed the rating of the circuit breaker.

OBS This product is obsolete.

[7] 15-20 A tandem or quad tandem circuit breakers are suitable for use with 60°C or 75°C conductors. 25-50 A tandem or quad tandem circuit breakers are suitable for use with 75°C conductors only.

[8] 15-30 A circuit breakers are suitable for use with 60°C or 75°C conductors. 40-125 A circuit breakers are suitable for use with 75°C conductors.

[9] 50–125 A QOM1 frame size; 100–225 A QOM2 frame size.

[10] Requires four spaces (1 AWG-300 kcmil Al/Cu). Use only in 1Ø panel rated 150 A or greater.

Multi9 C60_{BP} and C60_{BPR} Miniature Circuit Breakers

 $C60_{BP}$ and $C60_{BPR}$ are multi-standard miniature circuit breakers and branch circuit protection as defined by UL489. They combine the following functions:

- circuit protection against short-circuit curves
- circuit protection against overload currents
- tripping and fault indication by the addition of auxiliary accessories

| Number of | | Breaking Capacity (kA rms) | | | | | | | | | |

 $C60_{SP}$ circuit breakers are multi-standard miniature circuit beakers and supplementary protection as defined by UL1077. They combine the following functions:

- circuit protection against short-circuit curves
- circuit protection against overload currents
- tripping and fault indication by the addition of auxiliary accessories

Multi9 GFP Ground Fault Protectors

UL 1053 residual current circuit breakers already protected upstream by a short circuit and overload protection device are used for:

- · control and disconnection of electric circuits
- · protection of people against electric shock by direct and indirect contacts
- protection of installations against insulation faults
- enhanced continuity of supply, during a series of close lightning strokes, IT earthing system, equipment including interference suppression filters, variable speed controllers, frequency converters, electronic ballasts for lighting
- enhanced earth leakage protection: in presence of harmonics or high frequency ejections.

A-SI type GFPs are ideal for operation in environments with a humid atmosphere and/or polluted by aggressive agents: swimming pools, marinas, agri-food industries, water treatment stations, industrial sites, etc.

C60_{BP} (UL489) Comb Busbars

These comb busbars are aimed to be used only with $C60_{BP}$ circuit-breakers.

They perform distribution and subdistribution of the electric power supply and allow rapid assembly and disassembly of equipment.

Multi9 Circuit Breakers Busbar Offer Class 860 / Refer to Catalog LVCATM90EM EN SQUARE D

C60_{SP} (UL1077) Comb Busbars

The comb busbars are used only for C60^{SP} circuit breakers UL 1077 supplementary protection in conformity with standards:

• UL 1077 / CSA C22.2 No. 235 / IEC 60947-2 / GB 14048-2.

They perform distribution and subdistribution of the electric power supply and allow rapid assembly and disassembly of equipment.

| Function | | | | | | | | | | |
| | The comb busbars make it e supplementary protection. Power supply directly in the other supplementary su | cage of the circui | t breaker. | The Tooth Caps are insulated protectors which may be slipped onto the unused teeth of the comb busbar. They come in strips with 1-pole spacing, but can be snapped apart to be used individually. | | | | | | |

The PowerPacT Advantage

- Proven Performance: Industry-leading circuit breaker innovation and protection for heavy-duty commercial and industrial applications.
- Smart: Integrated metering options provide a cost-effective solution to reduce energy consumption, optimize energy costs, and improve energy availability for your facilities.
- Flexible: Full range of thermal-magnetic and electronic trip molded case circuit breakers from 15 to 3000 A, delivering the ratings, configurations, and operators for your unique applications.
- Simple: Common catalog numbers, standardized ratings, and a full range of fieldinstallable accessories make product selection, installation and maintenance easier than ever.
- Common Design Features: Mounting holes, door trim, and handle accessories

PowerPacT B-Frame Molded Case Circuit Breakers (125 A)

PowerPacT B-frame circuit breakers provides economical thermal-magnetic circuit protection in a compact size.

- Fixed 15-125 A thermal-magnetic protection up to 600Y/347 Vac and 250 Vdc
- 1- to 4-pole unit mount construction; 1- to 3-pole I-Line construction
- UL listed interrupting ratings from 18 kA to 65 kA at 480 Vac
- EverLink lugs, a cable connection method that helps maintain low resistance connections
- UL, CSA, NOM, IEC, CCC certified and UKCA and CE marked for global acceptance

PowerPacT H- and J-Frame Molded-Case Circuit Breakers (150 A and 250 A)

- A flexible, high performance offer certified to global standards.
- Thermal magnetic or MicroLogic $^{\rm TM}$ trip protection from 15–250 A up to 600 Vac and 250 Vdc
- 2 and 3-pole unit mount and I-Line constructions[6]
- High performance UL listed interrupting ratings from 18 to 200 kA at 480 Vac
- H- and J-Frame have common mounting holes, handle locations and trim dimensions with many shared accessories and auxiliaries.
- UL, CSA, NOM, IEC, CCC certified, and UKCA and CE marked for global acceptance.

JJ, JL and JR are UL certified as current limiting circuit breakers.

- [8] Circuit breakers with J and L interrupting ratings are UL certified as current limiting.
- [9] Standard lug kit: AL150HD. Terminal wire range: 14–3/0 AWG Al or Cu.
- [10] See Supplemental Digest Section 3 for circuit breakers with field interchangeable trip units.
- [11] HD and HG circuit breakers are true two-pole construction.
- [12] Circuit breakers with J, L, and R interrupting ratings are UL certified as current limiting.
- [13] 2P in a 3P module

MINIATURE AND MOLDED CIRCUIT BREAKERS CASE

[14] Circuit breakers with J, L, and R interrupting ratings are UL certified as current limiting.

See Supplemental Digest Section 3 for circuit breakers with field interchangeable trip units.

[15] [16] For applications requiring communications see page 7-68. 3P circuit breakers with this trip unit can be used for 2P applications.

[17]

Fixed ST and LT delays. [18]

[19] 3P circuit breakers with this trip unit can be used for 2P applications requiring ground fault protection. Additional metering capabilities will not work properly on the unconnected phase.

2–Pole Q-Frame with Thermal-Magnetic Trip Unit 70–250

3–Pole Q-Frame with Thermal-Magnetic Trip Unit 70–250 A

Q-Frame Molded Case Circuit Breakers (250 A)

PowerPacT Q-frame circuit breakers are used for overcurrent protection and switching on 240 Vac applications.[27]

- Fixed thermal magnetic protection from 70-250 A at 240 Vac
- 2- and 3-pole unit mount and I-Line constructions[28]
- UL listed interruption ratings from 10 kA to 100 kA at 240 Vac
- Available in standard (80%) rating only
- cULus and NOM certified

| F = No lugs | breaker catalog number. |
| L = Lugs both ends | |
| M = Lugs ON end, studs on OFF end | |
| P = Lugs OFF end, studs on ON end |] |

Dimension see page 7-85 Enclosures see page 7-86

Replacement lugs and electrical accessories are not available for PowerPacT Q-frame circuit breakers.

Q- frame can be used as main or sub-feed circuit breaker in a NQ panelboard. 250 A lugs are suitable for copper conductors only.

250 A circuit breakers are suitable for copper conductors only. [30] [31]

3P QJ circuit breakers are rated at 208Y/120 Vac only.

PowerPacT[™] Molded Case Circuit Breakers

Class 0734 / Refer to Catalog: 0734CT0201

LA/LH-Frame Molded Case Circuit Breaker (600 A)

- Thermal magnetic protection from 125-400 A up to 600 Vac and 250 Vdc
- 2- and 3-pole unit mount and I-Line constructions
- UL listed interrupting ratings from 30 kA to 35 kA at 480 Vac
- UL and CSA certified

NOTE: Consider using PowerPacT™ circuit breakers for situations requiring circuit breaker accessories. See PowerPacT Accessories, page 7-55 for more information.

PowerPacT L-Frame Electronic-Trip Circuit

Class 611 / Refer to Catalogs: 0611CT1001

Breakers

PowerPacT L-Frame Molded Case Circuit Breakers (600 A)

A flexible, high performance offer certified to global standards.

- Basic Electronic and MicroLogic trip protection from 250-600 Vac
- 2-, 3- and 4-pole design; wide range of trip units to protect most applications
- High performance UL listed interrupting ratings from 35 kA to 200 kA at 480 Vac
- Standard (80%) or 100% rating
- UL, CSA, NOM, IEC, CCC certified, and UKCA and CE marked for global acceptance

| 600 Vac | 14 kA | 18 kA | 25 kA | 50 kA | 100 kA | | | |

- Circuit breakers with J, L, and R interrupting ratings are UL certified as current limiting.
- [41] See Supplemental Digest Section 3 for circuit breakers with field interchangeable trip units.
- [42] For applications requiring communications see page 7-68.
- [43] 3P circuit breakers with this trip unit can be used for 2P applications.
- [44] Fixed ST and LT delays.

[40]

[45] 3-pole circuit breakers can be used for 2-pole applications. (For such instances, MicroLogic 6.2 Ammeter and Energy trip units can be used for ground fault protection. Additional metering capabilities are not guaranteed when using MicroLogic Ammeter and Energy trip units for this type of application.)

PowerPacT M-Frame Circuit Breaker with Basic Electronic Trip Unit

PowerPacT M-Frame Molded Case Circuit Breakers (800 A)

PowerPacT M-frame circuit breakers use an electronic trip system with the simplicity of a thermal magnetic breaker.

- Basic electronic trip protection from 300 to 800 A up to 600 Vac
- 2- and 3-pole unit mount and I-line construction
- UL listed interrupting ratings from 35 to 65 kA at 480 Vac
- Common mounting holes, handle locations and trim dimensions with shared auxiliaries and accessories with P-frame devices
- Available in standard (80%) rating only
- UL, CSA, NOM, IEC, CCC certified, and UKCA and CE marked for global acceptance

[47] For 2P and 4P information see Catalog 0612CT0101.

[48] To complete the catalog number:

Replact the with the appropriate interrupting rating (G, J, K or L).

For all L interrupting ratings, change the 5th character (voltage rating) from a 6 (600 V) to a 4 (480V). The 480 V AIR is standard 100 kA

For 100% rated circuit breakers, add a "C" in the 9th character place. For example, the catalog number for a 100% rated trip unit with LI trip functions at 250 A would be PBL36025CU31A.

PowerPacT R-Frame Molded Case Circuit Breakers (3000 A)

- MicroLogic electronic trip protection from 600–3000A up to 600 Vac
- 2-, 3- and 4-pole construction

Electronic Trip Unit [49]

- UL listed interrupting ratings from 35 to 100 kA at 480Vac
- Built-in Modbus protocol
- Standard (80%) and 100% rating
- UL, CSA, NOM, IEC, CCC certified, and UKCA and CE marked for global acceptance

Table 7.77: R-Frame 3000 A (600 Vac, 50/60 Hz) 3P Circuit Breaker with Electronic Trip Unit

Senso

[49] For 2P and 4P information see Catalog 0612CT0101.

[50] To complete the catalog number: Replace the \blacksquare with the appropriate interrupting rating (G, J, K or L).; For 100% rated circuit breakers, add a "C" in the 9th character place. For example, the catalog number for a 100% rated trip unit with LI trip functions at 2500 A would be RGF36025CU31A.

Class 612 / Refer to Catalog 0612CT0101

Unit-Mount R-Frame Standard Bus Connection

R-frame circuit breakers can be bus- or cable-connected.

- For cable connections, an optional terminal pad kit RLTB or equivalent bus structure is required.
- RLTB kits comes standard with bus bar connections.

RTLB / RT3B Kits

- RLTB kits are included with 2500 A 100% rated circuit breakers.
- Each kit contains terminal pads for one end of the circuit breaker only
- Has provisions for mounting a maximum of 8 lugs per phase (9 lugs for 3000 A).
- RL3TB kits are included with the 3000 A, 80% and 100% rated circuit breakers.

R-Frame I-Line circuit breakers come with lugs on the load side. (See Panelboards—Section 9).

For other circuit breakers, order terminal pad kit (RLTB) and optional lugs separately. See Terminal Nuts, Terminal Pads, Terminal Shields and Accessories, page 7-63 and Mechanical Lugs, page 7-60.

RTLB Terminal Pad Kit

[51] For 2P and 4P information see Catalog 0612CT0101.

[52] To complete the catalog number: Replace the a with the appropriate interrupting rating (G, J, K or L).; For 100% rated circuit breakers, add a "C" in the 9th character place. For example, the catalog number for a 100% rated trip unit with LI trip functions at 2500 A would be RGF36025CU31A.

PowerPacT Mission Critical Circuit Breakers

Delivering high levels of selective coordination in a flexible design that can be easily configured for a variety of applications.

- Adjustable long-time settings in three sensor sizes provide coverage from 70-600 A on 120-240, 208Y/120, 240, and 480Y/277 Vac systems
- Undergone rigorous testing procedures to certify the coordination with downstream circuit breakers
- Available in J-Frame (250A) and L-Frame (600A)
- UL 489 listed, CSA Certified Voltage: 480Y/277V

PowerPacT 500 Vdc Circuit Breakers

Designed for use on ungrounded dc systems having a maximum short-circuit voltage of 500 Vdc or a maximum floating (unloaded) voltage of 600 Vdc. Suitable for use only with UPS (ungrounded uninterruptable power supplies systems).

This two-level voltage rating allows these circuit breakers to be applied to battery sources having a short-circuit availability of 20,000 amperes or 50,000 amperes for PowerPacT H-, J-, and L-frame DC circuit breakers at 500 Vdc. IEC 500 Vdc rating is available on PowerPacT J-frame circuit breakers.

PowerPacT H-frame DC circuit breakers have a fixed magnetic trip system. PowerPacT J- and L-frame DC circuit breakers are provided with an adjustable magnetic trip that is readily accessible by means of a single adjustment on the face of the circuit breaker.

PowerPacT H- and J-frame circuit breakers are UL Listed for the interrupting ratings shown only if applied with three poles connected in series (series connection is external to circuit breaker). (See figure for example of diagram.)

PowerPacT L-frame circuit breakers are UL Listed for the interrupting ratings shown with two or three poles connected in series (series connection is external to circuit breaker).

NOTE: Due to external series connection, I-Line[™] circuit breakers are not available for this application.

Switch

PowerPacT Automatic Switches

Automatic molded case switches open instantaneously at a factory preset magnetic trip point. Calibrated to protect only the molded case switch itself, when it is subjected to high fault currents. The trip point is nonadjustable and provides no overload or low level fault protection.

- PowerPacT[™] H-, J-, and L-frame automatic switches are available in unit mount, I-Line[™], plug-in and drawout versions.
- Accept the same lugs and accessories as equivalent thermal-magnetic circuit breakers[1].
- May be interlocked with another switch or circuit breaker to form a source-changeover ٠ system
- UL Listed per UL 489 and CSA Certified.

Q-frame switches do not have electrical accessories available

True 2P device. Others are a 2P in a 3P module.

[3] UL magnetic trip tolerances are -20% / +30% from the nominal values shown [4]

P-frame L-interrupting is available in 480 Vac only.

Withstand rating of 10 kA at 240 Vac.

The withstand rating is the fault current at rated voltage that the molded case switch will withstand without damage when protected by a circuit breaker with an equal continuous current rating

B- and R-frame withstand is 65 kA.

MINIATURE AND MO CIRCUIT BREA

Instantaneous Trip Circuit Breakers for Motor Protection Applications

Adjustable instantaneous-trip circuit breakers are intended for use in combination with motor starters with overload relays for the protection of motor circuits from short circuits.

Other specific applications include rectifiers and resistance welders. These circuit breakers contain a magnetic trip element in each pole with the trip point adjustable from the front. Interrupting ratings are determined by testing the instantaneous-trip circuit breakers in combination with a contactor and overload relay.

Select instantaneous-trip circuit breakers as follows:

This selection table is suitable for motors, other than NEMA Design E, with locked-rotor indicating code letters per NEC[®] Table 430.7 (b) as follows:

Table 7.90: Locked-Rotor Indicating Codes

| Horsepower | Motor Code Letter |
|--------------|-------------------|
| 1/2 or less | A–L |
| 3/4 to 1-1/2 | A–K |
| 2 to 3 | A–J |
| 5 to 25 | A–H |
| 30 to 125 | A–G |
| 150 or more | A–F |

- For other motors order a special thermal-magnetic circuit breaker with magnetic trip settings for the specific motor— specify motor horsepower, voltage, frequency, full-load current and code letter or locked rotor current.
- Determine motor hp rating from the motor nameplate.
- Refer to the tables and select an instantaneous-trip circuit breaker with an ampere rating recommended for the hp and voltage involved.
- Select an adjustable trip setting of at least 800%, not to exceed 1300%, of the motor full-load amperes (FLA) for other than Design E motors. For Design E motors, select an adjustable trip setting of at least 1100% not to exceed 1700% of FLA.
- The NEC 1300% maximum setting may be inadequate for instantaneous-trip circuit breakers to withstand current surges typical of the magnetization current of autotransformer type reduced voltage starters, or open transition wye-delta starters during transfer from "start" to "run," constant hp multi-speed motors, and motors labeled "high efficiency." Select thermal-magnetic circuit breakers for those applications.
- Part-winding motors, per NEC 430.4, should have two circuit breakers selected from the above at not more than one half the allowable trip setting for the horsepower rating. The two circuit breakers should operate simultaneously as a disconnecting means per NEC 430.103.
- Based on NEC 430.52 and NEC Table 430.250.

[1]

Motor full load currents thru 200 hp are taken from NEC Tables 430.247, 248 and 250. Above 200 hp from UL 98. Select wire size, circuit breakers, or fuses on basis of hp rather than nameplate full load current per NEC 430.6. Do not use these values to select overload relay thermal units. See Digest pages 16-129—16152 for selection of thermal units when actual full load current is not known. Voltages listed are rated motor voltages. Corresponding nominal system voltages are 110-120 V, 200-208 V, 220-240 V, 440-480 V and 550-600 V

Thermal-magnetic circuit breaker ampere ratings recommended are approximate for average conditions, based on trip characteristics of Square D circuit breakers and NEC Table 430.52. [2] Under some conditions, the next size larger switch or circuit breaker rating may be necessary to accommodate the motor starting current and is permitted by NEC 430.52(C)(1) Exception 2. High starting currents are anticipated with Design E and other energy efficient motors. For explanation of Code letter markings, see NEC 430.7(B). For Busway Plug-in units, see page 9-7. Switch size only is shown in table. Selected fuses should not exceed maximum percent of full-load current as given in NEC Table 430.52. Above 50 hp dc switches are not hp rated by UL as

[3] Motor Circuit Switches, but as General Use Switches only and are not necessarily capable of interrupting the max. operating overload current of a motor. See NEC 100 for definition of General Use Switch. When protecting a 30, Design E energy efficient motor, the switch is required by NEC 430.109 to have a hp rating of not less than 1.4 times that of a motor rated 3-100 hp, or not less than 1.3 times that of a motor rated over 100 hp. Switches shown in this table do not necessarily comply with that requirement. [4]

NEC 430.22 (B) Exception No. 1. DC motors operating from rectified 10 power supply will require larger conductors per 430.22 (A) Exception No. 1. For motor-generator arc welders, see 630.11

[5] Thermal-magnetic breaker ampere ratings recommended are approximate for average conditions and based on trip characteristics of Square D circuit breakers and NEC Tables 430.7(B) and 430.52 [6]

Ordinary service for normal starting duty only, acceleration time of 10 sec. or less.

Heavy service is jogging or plugging duty or cycling load with over 25 starts per hour or over 5 starts per minute. Energy efficient motors are polyphase motors defined in NEMA Standard MG1 and exhibit high starting current.

200 V motors are commonly used on 208 V services. 8 XHHW requires 3/4 in. conduit for 3W.

Contact your local Field Office for circuit breaker selection on constant horsepower multispeed motors.

- [10] Motor full load currents thru 200 hp are taken from NEC Tables 430.247, 248 and 250. Above 200 hp from UL 98. Select wire size, circuit breakers, or fuses on basis of hp rather than nameplate full load current per NEC 430.6. Do not use these values to select overload relay thermal units. See Digest pages 16-129—16152 for selection of thermal units when actual full load current is not known. Voltages listed are rated motor voltages. Corresponding nominal system voltages are 110–120 V, 200–208 V, 220–240 V, 440–480 V and 550–600 V
- [11] Thermal-magnetic circuit breaker ampere ratings recommended are approximate for average conditions, based on trip characteristics of Square D circuit breakers and NEC Table 430.52.
 [11] Under some conditions, the next size larger switch or circuit breaker rating may be necessary to accommodate the motor starting current and is permitted by NEC 430.52(C)(1) Exception 2.
 High starting currents are anticipated with Design E and other energy efficient motors. For explanation of Code letter markings, see NEC 430.7(B). For Busway Plug-in units, see page 9-7.
- [12] Switch size only is shown in table. Selected fuses should not exceed maximum percent of full-load current as given in NEC Table 430.52. Above 50 hp dc switches are not hp rated by UL as Motor Circuit Switches, but as General Use Switches only and are not necessarily capable of interrupting the max. operating overload current of a motor. See NEC 100 for definition of General Use Switch. When protecting a 30, Design E energy efficient motor, the switch is required by NEC 430.109 to have a hp rating of not less than 1.4 times that of a motor rated 3–100 hp, or not less than 1.3 times that of a motor rated over 100 hp. Switches shown in this table do not necessarily comply with that requirement.
- [13] NEC 430.22 for Single Motor, Smaller conductors may be permitted for light duty-cycle service per 430.22 (B) Exception No. 1. DC motors operating from rectified 1Ø power supply will require larger conductors per 430.22 (A) Exception No. 1. For motor-generator arc welders, see 630.11
- [14] Thermal-magnetic breaker ampere ratings recommended are approximate for average conditions and based on trip characteristics of Square D circuit breakers and NEC Tables 430.7(B) and 430.52.
- [15] Ordinary service for normal starting duty only, acceleration time of 10 sec. or less.
- [16] Heavy service is jogging or plugging duty or cycling load with over 25 starts per hour or over 5 starts per minute. Energy efficient motors are polyphase motors defined in NEMA Standard MG1 and exhibit high starting current.
- [17] 200 V motors are commonly used on 208 V services.

PowerPacT Motor Protector Circuit Breakers—Two Device Solutions

Accessories see page 7-55 and Supplemental Digest Section 3 Optional Lugs see page 7-60 and Supplemental Digest Section 3 Dimensions see page 7-85 Enclosures see page 7-86

- MicroLogic 2.2M and 2.3M trip units provide built-in thermal and magnetic protections. Use PowerPacT Motor Protect Circuit Breakers in two-device motor feeder solutions to provide protection against short-circuits, overloads, and phase unbalance.
- Protection settings are made using a rotary switch.
- Accept the same accessories and terminals as equivalent PowerPacT circuit breakers.
- UL, CSA, NOM, IEC, CCC certified, and UKCA and CE marked for global acceptance.

[10] Two-device solutions (these electronic motor protector circuit breakers include short circuit and overload protection) · 1 electronic motor circuit protector with a MicroLogic 2.2 M plus

1 contactor

The standard trip unit offers Class 5, 10 and 20 and phase unbalance or phase loss protection. [11]

Motor full-load currents are taken from NEC Table 430.250. Select wire and circuit breakers on basis of horsepower rather than nameplate full-load current per NEC 430.6 (A) for general [12] motor applications. Do not use these values to select overload relay thermal units. See Digest Section 14 for selection of thermal units when actual full load current is not known. The voltages listed are rated motor voltages. Corresponding nominal system voltages are 200-208, 220-240, 440-480 and 550-600 V. [13]

To complete catalog number, replace the blank with the appropriate rating (G, J, L or R). Only MIN and MAX settings are shown, intermediate settings are available on all circuit breakers.

[14] 7-52

CIRCUIT BREA

Motor Circuit Protection Selection

PowerPacT H- and J-frame electronic Motor Circuit Protectors (MCP) are magnetic-only instantaneous-trip circuit breakers. They are designed to offer short circuit protection and are National Electrical Code (NEC) compliant when installed as part of a combination controller having motor overload protection. MCP circuit breakers accept the same accessories and terminals as the equivalent thermal-magnetic circuit breakers.

Determine the hp rating from the nameplate of the motor. Select a MCP with an ampere rating recommended for the hp and voltage involved. When using the automatic settings the MCP microprocessor automatically adjusts the trip settings for both current and time to align with the start-up characteristic for the motor type, whether it is a standard or energy-efficient motor. This includes a dampening means to accommodate a transient motor in-rush current without nuisance tripping of the circuit breaker.

Table 7.94: H- and J-Frame Electronic Motor Circuit Protectors (MCP)

| Frame | Sensor Rating | Full Load Amperes Range | Adjustable Instantane- ous Trip Range | Suffix | J (See SCCR Cat. No. Table Below) | L (See SCCR Cat. No. Table Below) | R (See SCCR Cat. No. Table Below) |

| 00 | | | 1/2 | | 1.1 A | and | | |
| 00 | | | | 3/4 | 1.3 A | HLL36030M71 | | |
| | | | 3/4 | 1 | 1.7 A | 1/2–10 hp | | |

[15] Based on 2015 NEC Table 430.52.

[16] See NEC Exception No. 1 to Table 430.52. The NEC 1300% maximum setting may be inadequate for instantaneous trip circuit breakers to withstand current surges typical of the magnetization current of autotransformer type reduced voltage starters, or open transition wye-delta starters during transfer from "start" to "run," constant hp multi-speed motors, and motors labeled "high efficiency."

[17] Based on 2005 NEC Table 430.250.

[18] Per NEC 430.3, part-winding motors should select two circuit breakers, each at not more than one-half the allowable trip setting for the horsepower rating. The two circuit breakers should operate simultaneously as a disconnecting means per NEC 430.103.

[19] Listed voltages are rated motor voltages. Corresponding system voltages are 200 Vac, 220–240 Vac, 440–480 Vac and 550–600 Vac. Select wire and circuit breakers based on horsepower rather than nameplate full-load current per NEC 430.6 (A) for general motor applications.

Motor Operators and Rotary Handles

Class 612 / Refer to Catalog 0612CT0101

Motor Operators

Motor Operators for H-, J-, and L-Frame Circuit Breakers

- Circuit-breaker indications and information remain visible and accessible, including trip-unit settings and indications
- Suitability for isolation is maintained and padlocking remains possible
- All termination connection (fixed, plug-in/withdrawable) possibilities are maintained
- Double insulation of the front face

Spring-Charging Motors for Electrically-Operated P-Frame Circuit Breakers

Automatically charges the spring mechanism for closing the P-frame circuit breaker and also recharges the spring mechanism when the circuit breaker is in the ON position. Instantaneous reclosing of the circuit breaker is thus possible following circuit breaker opening.

Not available in H-frame 2P modules.

[6] Factory and field-installed standard motor operators for H- and J-frame circuit breakers require the SDE switch and SDE adapter (both included)

Factory and field-installed standard motor operators for L-frame circuit breakers require the SDE switch (included).

Installation requires BSCM with NSX Cord. For ordering information see page 7-68

AL800M23K

M- and P-Frame Lugs (800 A and below)

For terminal nuts/bus bar connections see page 7-63.

LU = ON end only, LV = OFF end only, LW = BOTH ends

Lug kits for Legacy L-frame circuit breakers can be found in Supplemental Digest Section 11 (i.e. LA, LH circuit breakers).

For lug with a tapped hole for control wire, add a "T" before the "K" in the catalog number (for example, AL800P6TK).

Does not fit onto ON end of unit-mount P-frame circuit breakers.

For unit-mount circuit breaker only.

All unit-mount R-frame circuit breakers require terminal pads for mounting lugs of any type. Not available with tapped hole for control wire.

This lug can only be used on low amp PJ frame breakers where the Instantaneous setting must not be turned OFF. The cables must be laced with rope per lug instructions.

Compression Lugs and Power Distribution Connectors (PDC)

Class 612 / Refer to Catalog 0612CT0101

Power Distribution Connectors

Power distribution connectors (PDCs) can be used for multiple load wire connections on one circuit breaker in place of standard distribution block to save space and time.

The connectors are attached to circuit breaker terminals equipped with separately provided terminal nut connectors. $_{\ensuremath{\mathcal{I}}\xspace29}$

Applications:

- For use on load end of circuit breaker only
- For use in UL 508 Industrial Control applications
- For use in UL 1995/CSA C22.2 No. 236 heating and cooling equipment
- For copper wire only

PDC6HD6

Crimp lugs or PDC connectors extension "A" past end of circuit breaker

[29] Refer to Terminal Shields and Phase Barriers.

[30] Not for use with I-Line™ circuit breakers

Special Purpose—Not for General Use. Use on ON end of the circuit breaker only when ON end is used as Load end. Use on OFF end of the circuit breaker only when OFF end is used as Load end.

Kit includes long terminal shield and cover, which adds 1.65 inches to standard lug with short terminal shield.

MicroLogic Trip Units [1]

MicroLogic Standard 3.2/3.3 Trip Units

 $\label{eq:PowerPacT^{TM}} \text{H-, J-, and L-frame molded case circuit breakers may be specified with any of the following MicroLogic Electronic Trip Units.}$

- True RMS sensing
- LI, LSI trip configurations
- Field-interchangeable trip units
- LED long-time pickup and trip indication
- Test kits available
- Thermal imaging

MicroLogic Ammeter 5.2A/5.3A/6.2A/6.3A Trip Units

Includes all features listed for MicroLogic standard trip unit, as well as:

- Advanced user interface
- Neutral protection
- Incremental fine tuning of settings
- Up to 12 alarms
- Digital ammeter—phase and neutral (4-pole only)
- Phase loading bar graph
- Maintenance indicators including contact wear, number of operations, operating hours, and load profiles
- · Cause of trip information for troubleshooting assistance
- LCD Display
- Zone-selective interlocking (ZSI) (short-time & ground-fault)
- Optional Modbus[™] communications—PowerLogic[™] compatible

MicroLogic Energy 5.2E/5.3E/6.2E/6.3E Trip Units

Includes all features listed for MicroLogic ammeter trip unit, as well as:

- Ground-fault trip with programmable ground fault alarm (available on 6.2E/6.3E only)
- Power and energy measurement
- Power quality measurements
- Current demand and power demand measurements

MicroLogic Standard Trip Unit MicroLogic Ammeter and Energy Trip Unit

PowerPacT H-, J-, and L-Frame MicroLogic Trip Units

Class 612 / Refer to Catalog 0612CT0101

PowerPacT P- and R-Frame MicroLogic Trip Units

MicroLogic (Standard) 3.0 and 5.0 Trip Units

PowerPacT[™] P- and R-frame molded case circuit breakers may be specified with any of the following MicroLogic Electronic Trip Units.

- True RMS sensing
- LI, LSI trip configurations
- · Field-interchangeable long-time rating plugs
- LED long-time pickup indication
- Test kits available
- Thermal imaging

MicroLogic (Ammeter) 3.0A, 5.0A and 6.0A Trip Units

Includes all features listed for MicroLogic standard trip unit, as well as:

- LSIG trip configurations
- Digital ammeter-phase and neutral (4-pole only)
- Phase loading bar graph
- LED trip indication
- Zone-selective interlocking (ZSI) (short-time & ground-fault)
- Optional Modbus™ communications—PowerLogic™ compatible

MicroLogic (Power) 5.0P and 6.0P Trip Units

Power measurement and advanced protection features includes all features listed for MicroLogic ammeter trip unit, as well as:

- LSI trip configuration with programmable ground fault alarm
- LSIG (Ground-fault trip) with programmable ground fault alarm
- Incremental "fine tuning" of L, S, I, and G pickup and delay settings
- LCD dot matrix display and LED trip indication
- Advanced user interface
- Advanced protection IDMTL—selectable long-time delay bands
- Neutral protection
- Power measurement
- Contact wear indication
- Modbus communications—PowerLogic compatible
- Local and remote settings

MicroLogic (Harmonic) 5.0H and 6.0H Trip Units

Power quality measurement and advanced protection features. Includes all features listed for the MicroLogic power trip unit, as well as:

- · Enhanced power measurements functions
- Power quality measurements

Adjustable Rating Plugs for PowerPacT™ P-Frame and R-Frame and MasterPacT™ NT and NW Circuit Breakers—Selection

To provide maximum design flexibility, system protection, and field upgradeability, each MicroLogic™ trip unit is equipped with an interchangeable long-time rating plug. Each trip unit requires an adjustable rating plug to determine the long-time pickup range of the circuit breaker. These plugs are factory installed on new trip units, or can be ordered separately for field-installable upgrades.

Adjustable rating plugs are offered in eight different ranges of long-time pickup adjustments. The following chart show the ranges of adjustments. Each adjustment times the sensor rating (Ir x In) of the circuit breaker sets the long-time pickup value of the circuit breaker.

Table 7.125: Special Options

| Description | Factory-Installed Suffix | Field-Installable Cat. No. |
|---|--------------------------|-------------------------------|
| Ship circuit breaker in closed position | YK | N/A |
| Alternate Maintenance Setting (AMS) kit (use with 5.0/6.0 A, P or H and 5.3/6.3 A or E MicroLogic trip units) | _ | 84957 |
| Energy Reduction Maintenance Setting (ERMS) kit (use with 5.0/6.0 P or H MicroLogic trip units) | — | 84956 |
| Maintenance Mode Setting Switch kit | 120 Vac | LV429659 |
| Maintenance Mode Setting Switch Kit | 24 Vdc | LV429658 |

[2] The standard rating plug supplied with a trip unit will be the "A" rating plug. To specify an alternative adjustable rating plug, please add the letter designation to the end of the catalog number. Please refer to page 7-68 for a complete listing of adjustable settings available with each plug. (Example: S143B would specify a "B" rating plug instead of the standard "A" plug.) Use suffix "N" if no rating plug is required, deduct.

(3) When replacing a standard trip unit with Type A (Ammeter), P (Power metering) or H (Harmonic analysis) trip unit, order the 12-pin connector kit S33101 for the MasterPacT NW and NT and the PowerPacT P-frame drawout circuit breakers or kit S33100 for PowerPacT P-frame and R-frame unit-mount and I-Line circuit breakers.

[4] Requires Circuit Breaker Communications Module.

[5] Requires neutral current transformer in 3Ø4W systems.

[6] Alarm history is available through the trip unit display and communications. Local indication of an alarm requires an M2C Programmable Contact Module.

Adjustable rating plug "A" is installed as standard on all MicroLogic trip unit orders. However, an alternative selection may be specified from the "Assembled" table below, and factory installed with your trip unit order at no additional charge. To order, please attach the appropriate catalog suffix to the end of the trip unit Cat. No. (after specifying trip unit options). Adjustable rating plugs may also be purchased as field-installable components from the table below.

For Enerlin'X accessory information, see Enerlin'X Digital Solutions, page 7-79

[12] Wire harness is required for I-Line applications, optional for unit-mount applications

YH1 = all installed accessories but ZSI and ENCT

- YH2 = ENCT and all installed accessories
- YH3 = ZSI and all installed accessories
- YH4 = ZSI, ENCT and all installed accessories
- [13] For proper selection, see catalog 0611CT1001.
- [14] Installation requires IFM (LV434000) for Modbus communication and/or FDM (STRV00121) for external display.
- [15] If using with motor operator requires communicating motor operator (suffix NC).
- [16] Remote indication relay for motor applications
- [17] Remote indication relay
- I-Line wire harness is included for communication network accessories. [18]
- Optional wire harness for unit mount requires YH1 suffix. [19] Compatible with MicroLogic P and H only.

New!) MasterPacT MTZ Circuit Breakers

MasterPacT MTZ continues the performance and reliability of the MasterPacT line. MasterPacT MTZ circuit breakers bring innovation and upgradability throughout the

entire lifecycle, for improved power uptime, business performance, and cost control. Customize MicroLogic X control unit anytime •

- Purchase optional Digital Modules for additional protection, measurement and • maintenance & diagnostic
- Easy installation using established architectures ٠
- Demonstrated compliance with standards
- Smartphone connectivity for wireless alerts and maintenance
- Built in power meter with Class 1 precision for smart energy metering

MasterPacT MTZ2 800–4000 A

New!)

PC running EcoStruxure Power Commission

MicroLogic X Control Unit for MasterPacT MTZ Circuit Breakers

The MicroLogic X control unit protection functions include overcurrent, short-circuit, and ground-fault protection. Along with the standard protection functions LI, LSI, and LSIG, new features enhance the overall performance of a system: dual settings, fine settings, fast tripping.

MicroLogic X measures electrical parameters of a power system: currents, voltages, frequency, power, energy, power factor, current and power demand. Min/Max and average values are calculated for most of the parameters.

MicroLogic X capability for maintenance & diagnostics simplifies circuit breaker service and operations. Relevant indicators and messages are powerful tools that can help the user scheduling both preventive and predictive maintenance, and device replacement.

MasterPacT MTZ Digital Modules Options for Advanced Functions

Optional Digital Modules can be purchased and downloaded to enhance the performance of MicroLogic X control units. They are dedicated to advanced protection, measurement, and maintenance & diagnostics, and are available through Go Digital on the Schneider Electric website.

| Module (Available on the Schneider Electric GoDigital Website) | | | | | | | | |
|--|--|----------|--|--|--|--|--|--|
| Protection | | | | | | | | |
| ANSI 27/59—Under/Over Voltage Protection | Monitors the circuit breaker voltages and trips when the voltage exceeds the settings. | LV850012 | | | | | | |
| ANSI 32P—Reverse Active Power Protection | Monitors the active power. | LV850011 | | | | | | |
| ANSI 51N/51G—Ground-Fault Alarm | Provides an integrated ground fault alarm. | LV850007 | | | | | | |
| ERMS—Energy Reducing Maintenance Settings | Used to lower the protection settings in order for the MasterPacT MTZ circuit breaker to trip faster, reducing arc energy. | LV850009 | | | | | | |
| Metering | | | | | | | | |
| Energy per Phase Digital Module | Calculates and displays the active, reactive and apparent energy per phase of the power system and provides total active, reactive and apparent energy per phase. | LV850002 | | | | | | |
| Individual Harmonics Analysis | Provide harmonics of voltage and current to the 40th harmonic. | LV850006 | | | | | | |
| Maintenance & Diagnostic | | | | | | | | |
| Power Restoration Assistant, | Displays available circuit breaker information to help determine potential causes of an event and also provides guidance for potential solutions to restore power. | LV850004 | | | | | | |
| MasterPacT Operation Assistant | Assists in closing or opening the circuit breaker remotely with Bluetooth by delivering applicable instructions. Requires Comm & Diag accessories. | LV850005 | | | | | | |
| Waveform Capture on Trip Event | Automatically logs five cycles of phase and neutral currents. | LV850003 | | | | | | |
| Modbus Legacy Dataset | Allows easy integration in existing Modbus installations where modification of supervision software for MTZ circuit breakers is not desired. | LV850045 | | | | | | |

New generation MicroLogic X control units incorporate wireless technology (Bluetooth and NFC) that allows the transfer of a wide selection of critical information (protection, measurements, maintenance & diagnostics) to your mobile device, by means of the EcoStruxure Power Device App.

Alternatively, MasterPacT MTZ can be equipped with ETHERNET communication through either the IFE module or the new embedded EIFE that includes webpages. Modbus SL communication is available through the IFM interface module.

MasterPacT[™] MTZ Circuit Breakers

Class 0614 / Refer to Catalog 0614CT1701

Vigirex[™] Ground-Fault Relay System

The Vigirex ground-fault relays, with associated sensors (current transformers), measure the residual current in an electrical installation to detect levels which may be damaging. When used for protection, they cause an associated circuit breaker or switch to interrupt the supply of power to the protected system. They may also be used for monitoring only, with output to an alarm. The product line includes fixed sensitivities from 30 mA to 1 A and adjustable sensitivities up to 30 A.

The Vigirex relays may be easily mounted on DIN rail or may be panel mounted in a meter cutout. Sensors for conductors range from a little more than an inch diameter toroids, to large rectangular sensors measuring 6×18 inches. The compact size of the relay and its sensor make it ideal for protection of OEM equipment as well as branch circuits.

Table 7.144: Vigirex Ground-Fault Relays (UL 1053 Listed)

RH99M

RH99P

30 mA is instantaneous only, except for RH99M and RH99P models. Their suffix TD indicates time delay at 30 mA. For models with no time delay (IEC compliant) consult catalog [7] 0972CT0401 [8]

Use as a guideline for sizing wire through sensor.

7-76

MasterPacT NT

MasterPacT NW

MasterPacT NT and NW Circuit Breakers

The MasterPacT NT and NW universal power circuit breakers offer a family of circuit protection products meeting the most common world standards, ANSI, UL and IEC. The basic design platform for each is common. The final result is UL, ANSI and IEC circuit breakers with the same basic external dimensions, features and accessories.

- Complete product offering up to 200 k AIR without fuses
- Circuit breakers tested to show arc flash hazard risk category as referenced by • NFPA70E
- 800 A to 6000 A frames, fixed and draw-out
- Rated for AC voltage systems through 600 V (635 V ANSI)
- Short-time withstand ratings up to 100 kA •
- Cradle position indicator: connected, test and disconnected •
- · Simple, visual contact wear indicators
- · Full complement of field-installable accessories common to all standards
- Four interchangeable MicroLogic trip units to choose from
- Available PowerLogic[™] based power metering and monitoring capabilities
- Available protective relay functions as defined by ANSI C37.2 and C37.90

The following charts show the MasterPacT NW and NT ratings for ANSI and UL 489. See the Catalog 0613CT0001.

Electric www.se.com/us

Schneider

(FDM121)

Ethernet LCD Color Touch Display (FDM128)

Enerlin'X System for MicroLogic Trip Units

Enerlin'X Systems enable network connectivity for MasterPacT and PowerPacT circuit breakers to provide remote monitoring, control & alarming features which is central to the Smart Systems Architecture with Square D low voltage distribution equipment.

Enerlin'X interface modules support Smart System Applications by facilitating access to circuit breaker data that provides performance information, circuit breaker status, metering measurements and various maintenance alert indicators such as contact wear, operation counters, load profile etc.

Recommended 24 Vdc Power Supplies

Available 24 Vdc power supplies include the range of Phaseo ABL8 modules and the AD modules:

- Schneider Electric Phaseo ABL8 power supplies (3 to 10 A, overvoltage category II) ٠ are recommended for large installations.
- Schneider Electric AD power supplies (1 A, overvoltage category IV) are recommended in the following cases: ٠

- For installations limited to a few IMUs.

- As a power supply of MicroLogic trip units in MasterPacT NT/NW or PowerPacT Pand R-frame circuit breakers.

Table 7.151: Power Supply Modules for MicroLogic Trip Units and Enerlin'X Modules

| Power Supply | Rating | Input-Output Voltage | Catalog No. |
|---|--------|----------------------|--------------|
| | | 24/30 Vac, 24 Vdc | LV454440 |
| Schneider Electric AD Power Supply | | 48/60 Vac, 24 Vdc | LV454441 |
| Primary overvoltage category IV | 1A | 100/125 Vac, 24 Vdc | LV454442 |
| Temperature: –25 ⁸ C tp +70°C (-13°F to +158°F) | | 110/130 Vac, 24 Vdc | LV454443 |
| | | 200/240 Vac, 24 Vdc | LV454444 |
| Schneider Electric Phaseo ABL8 Power Supply | 3 A | 100/500 Vac, 24 Vdc | ABL8RPS24030 |
| Primary overvoltage category II | 5 A | 100/500 Vac, 24 Vdc | ABL8RPS24050 |
| Temperature: 0°C tp +60°C (32°F to +140°F) (derated to 80% of the current above 50°C [122°F]) | 10 A | 100/500 Vac, 24 Vdc | ABL8RPS24100 |

Modules Class 931, 940, 960

GFM250 with Optional GFM25CT

MicroLogic[™] Add-on Ground-Fault Module (GFM)

The MicroLogic Ground-Fault Module (GFM) is a UL Listed/CSA Certified circuit breaker accessory which protects equipment from damage caused by ground faults. It is an add-on module which, when connected to a PowerPacT H- or J-frame thermal-magnetic circuit breaker only, provides ground-fault sensing and ground-fault relay functions.

HD/JD ground-fault modules feature:

- Adjustable ground-fault pickup levels
- Adjustable ground-fault time delays
- Integral ground fault push-to-test feature
- Ground-fault indicator (mechanical for local, contacts for remote)
- All GFMs are supplied for I-Line ™ mounting as standard, easily convertible to unit mount by removing the I-Line bracket
- Fault-powered (through the sensing current transformer) for electronics, shunt trip, and integral test feature. Meets NEC 230.95(C)
- A 12 Vdc shunt trip module (Catalog No. P29382) is required in the circuit breaker. This may be field installed or factory installed when the circuit breaker is ordered with an -SN suffix.
- UL 1053 Ground-fault Sensing and Relaying Equipment

The GFM system requires the following:

- H-frame (15–150 A) or J-frame (150–250 A) molded case circuit breaker
- Shunt trip is required for the function of the GFM (may be factory-installed or fieldinstalled)
- Bus bar connection (terminal nut inserts) for OFF end of circuit breaker
- Optional neutral current transformer, catalog number GFM25CT (must be ordered for 4-wire applications). NOTE: Ground-fault modules cannot be used for alarming only.

Table 7.152: Module/Enclosure Selection Chart [1]

| Companion Circuit Breaker Prefix | Cat. No. [2] | I-Line Switchboard | Ground-fault Pickup Adjustment Range | | | | |
|-------------------------------------|--------------|--|---|--|--|--|--|
| HD, HG, HJ, HL | GFM150HD | LA | 20–100 A | | | | |
| JD, JG, JJ, JL | GFM250JD | LA | 40–200 A | | | | |
| Accessories | | | | | | | |
| Н & .I | GEM25CT | Optional Neutral Current Transformer (required for 4-wire loads) | | | | | |

Earth Leakage Module (ELM) for PowerPacT H- and J-Frame MCCBs

The Earth Leakage Module (ELM) is an add-on module which, when connected to a PowerPacT H- or J-frame MCCB, provides low-level ground-fault sensing and ground-fault relay functions.

Because these ELMs are highly sensitive (30 mA to 3 A), they provide much greater protection than GFMs (20 to 200 A sensitivity). The ELMs provide greater protection of control circuits and other sensitive equipment. The associated circuit breaker must have a 48 Vdc shunt trip, which may be field-installed (kit P29392) or factory-installed (suffix – SP) in the H- or J-Frame circuit breaker.

Add-on Earth Leakage Module (ELM) Features:

- Adjustable ground-fault pickup levels as low as 30 mA
- Adjustable ground-fault time delays from instantaneous to 500 msec (Time delay can be applied to the 30 mA setting)
- Integral ground fault push-to-test feature
- Ground-fault indicator; pop-up button for local status and contacts for remote indication (to be used only with the tripping option)
- All ELMs are supplied for I-Line™ mounting and are easily convertible to unit-mount by removing the I-Line brackets
- Three poles; 240 to 600 Vac maximum: 3-wire applications only (no neutral)
- Line-power obtained through internal bus to provide power for electronics, shunt trip, and integral test feature.
 - A shunt trip is required in the circuit breaker; it may be field-installed or factoryinstalled in the PowerPacT H and J circuit breakers.
- UL 1053 Ground-fault Sensing and Relaying Equipment

Table 7.153: ELM Selection Chart [3]

| Companion Circuit | Breaker [4] | Enclosure Space | Pick-Up Adjustment | Ostala a Novaha a | |
|-------------------|-------------|--------------------------------|--------------------|-------------------|--|
| Prefix | Size | Required I-Line Switchboard | Range | Catalog Number | |
| HD, HG, HJ, HL | 15–150 A | LA | 30 mA–3 A | ELM150HD | |
| JD, JG, JJ, JL | 150–250 A | LA | 30 mA–3 A | ELM250JD | |

J-Frame Unit Mount with ELM Installed

- [1] At 250 A, the GFM250JD can be used with 80% rated circuit breakers only
- [2] See Supplemental Digest Section 3 for additional GFMs.
- [3] At 250 Å, the ELM250JD can be used with 80% rated circuit breakers only.
- [4] For Factory Installation of ELM Module: For termination designation (3rd letter of catalog number) use ONLY "M". Add factory installed 48 Vdc shunt trip (suffix SP) to breaker plus suffix VL or VM.

PowerPacT Circuit Breaker Enclosures

- The enclosures for the family of PowerPacT circuit breakers B- through Q-frame are cULus listed unless otherwise noted.
- The enclosures are suitable for service entrance equipment when neutral assembly is . installed
- The short circuit current rating of the enclosed circuit breakers is equal to the rating of the circuit breaker installed unless otherwise noted.
- All enclosures will accept 100% rated circuit breakers unless otherwise noted.

PowerPacT B-Frame Circuit Breaker Enclosures

- The enclosures' maximum short circuit ratings are 65 kA at 600Y. 65 kA at 480 Vac. 100 kA at 240 Vac and 50 kA at 250 Vdc unless otherwise noted.
- Enclosures accept 100% rated circuit breakers ^[8].

PowerPacT[™] H- and J-Frame Circuit Breaker Enclosures

The enclosures' maximum short circuit ratings are 25 kAIR at 600 Vac, 65 kAIR at 480 Vac, 125 kAIR at 240 Vac and 20 kA at 250 Vdc unless otherwise noted. Enclosures accept 100% rated circuit breakers [2]. The enclosures are not compatible with earthleakage or ground-fault modules.

H- and J-frame circuit breakers with MicroLogic trip units can be used with these enclosures, but have the following limitations

- No communication accessories can be mounted in the enclosure (no IFM or Front Display Module, IFE, etc).
- The trip unit will not be accessible or visible without the removal of the cover (except J250F and J250S).
- For LSIG, there is no room for the NCT to mount in the enclosure.

[1]

[2] [3] [4] [5]

[6]

[7]

For NEMA 3R applications, remove drain scerw from bottom end well.

Use only 90°C (minimum) rated wire sized per ampacity of 75°C rated conductors for 100% rated circuit breakers

Rated for 240 Vac maximum. Short circuit current rating is 25 kAIR at 240 Vac.

Accepts standard 80% rated circuit breakers only. Not rated for 100% rated circuit breakers.

Use copper conductors only.

Rated 480 Vac maximum. Short circuit current rating is 18 kAIR at 480 V.

For conduit entry through the top end wall use one of the following Square D conduit hubs: A200L for 2.00 in., A250L for 2.50 in., A300L for 3.00 in., A350L for 3.50 in. or A400L for 4.00 in.

[8] Add suffix BE if no knockouts are required on the end walls. [9]

For access to the circuit breaker's standard, ammeter or energy trip unit panel/LCD, add suffix T.

For 200% neutral use copper wire only. [10]

Complete rating is NEMA 3, 3R, 4, 4X, 5, and 12. [11]

For NEMA 3R applications, remove drain screw from bottom endwall. [12]

[13] Add suffix VW for visibility to the standard, ammeter or energy trip unit of the PowerPact circuit breaker.

Enclosures Class 610

PowerPacT L-Frame Circuit Breaker and Molded Case Switch Enclosures

All enclosures accept 80% rated circuit breakers. The enclosures will also accept 100% rated circuit breakers to 400 amps. The enclosures have a blank top end wall and require field-cut openings. For details and hub catalog numbers see page 3–10.

Table 7.163: PowerPacT L-Frame Circuit Breaker Enclosures

PowerPacT Q-Frame Circuit Breaker Enclosures

The enclosures for the PowerPacT Q Frame Circuit Breaker are UL listed. The short circuit ratings of these enclosed circuit breakers are equal to the interrupter ratings, at the supply voltage marked on the circuit breaker installed, unless otherwise noted.

Table 7.164: PowerPacT Q-Frame Circuit Breaker Enclosures

PowerPacT M- and P-Frame Circuit Breaker Enclosures

All enclosures will accept 80% rated circuit breakers. The P1200 enclosures will accept 100% rated circuit breakers to 800 A. If a CT neutral is required, the enclosure will no longer accept a 200% neutral. The M800R and the P1200R enclosures have a blank top end wall and require field-cut openings. For details and hub catalog numbers see page 3-10.

Table 7.165: PowerPacT M- and P-Frame Circuit Breaker Enclosures

PowerPacT L-Frame 500 Vdc Circuit Breaker Enclosures

The PowerPacT L-frame circuit breaker enclosure's maximum short circuit rating is 20 kAIR at 250 Vdc and 50 kAIR at 500 Vdc.

Listed for use ONLY on UPS systems.

Table 7.166: DC Circuit Breaker Enclosures for LG and LL DC-Rated Circuit Breakers

| Circuit Bre | Circuit Breaker [23] | | | Cat. No. | | | |
|--|----------------------|---|-----------------------------|----------------------------|-----------------------|--|--|

| LGL, LLL | 700–1200 A | 4 | L1200S | 8010440301 | Standard | | |

[14] Will accept PowerPacT L-frame circuit breakers and Motor Protectors with suffixes M38X

[15] For NEMA 3R applications, remove drain screw from bottom endwall.

[16] Add suffix VW for visibility to the standard, ammeter or energy trip unit of the PowerPact circuit breaker

[17] Will accept PowerPacT L-frame Molded Case Switches

[18] When the QJL circuit breaker is installed in the enclosure, the enclosure is limited to Short Circuit Current ratings of 65 kAIR at 240 V and 100 kAIR at 208 V.

[19] Limited to 200 A.

[20] Order current transformer kit S33576 seperately.

[21] Current transformers applicable only on PowerPacT P circuit breakers. Current limitations are 400-800 A and 400-1200 A respectively for the M800 and P1200 family of enclosures.

[22] Complete rating is NEMA 3, 3R, 4, 4X, 5, and 12.

[23] Use 500 Vdc or 250 Vdc rated circuit breakers only.

LA/LH Circuit Breaker Enclosures LA/LH Thermal-Magnetic Circuit Breaker Enclosures

The enclosures for the LA/LH thermal-magnetic circuit breakers are UL listed and CSA certified. The enclosures are suitable for service entrance equipment when neutral assembly is installed. The short circuit ratings of these enclosed circuit breakers are equal to the interrupter rating, at the supply voltage marked on the circuit breaker installed.

The LA400R enclosure has a blank top end wall and requires field cut openings. For details and hub catalog numbers see Digest Section 3.

Enclosures for Special Applications

Hazardous Locations: NEMA 7 And NEMA 9 Circuit Breaker Enclosures

The NEMA 7 and 9 enclosures are cULus listed unless otherwise noted. They are rated for use in hazardous locations as defined in NEC Article 500. The short circuit current rating of the enclosed circuit breakers is equal to the rating of the circuit breaker installed unless otherwise noted. They are suitable for use as service entrance equipment when neutral is installed. Enclosures require the use of 75°C copper wire only. The NEMA 7 enclosures are suitable for rainproof applications when the included PKDB1 breather and drain kit is installed.

Table 7.168: NEMA 7 and NEMA 9 Circuit Breaker Enclosures; Thermal-Magnetic B-Frame and PowerPacT J-Frame Cicuit Breakers

Enclosed Molded Case Switches

For information on enclosed molded case switches, see Supplemental Digest Section 3.

[24]

Enclosures are provided with the Handle Padlock Attachment (HPALM) for field installation to lock the circuit breaker in the "ON" or "OFF" positions.

Use copper conductors only. [25] [26]

Maximum short circuit and voltage is 30 kAIR at 480 Vac. LAL or LHL circuit breakers with an MB or MT suffix are not compatible with these enclosures: LA400DS, LA400AWK, and LA400LS

[27] [28] Enclosure cover has an integral padlock provision to provide a means to lock the circuit breaker in the "ON" or "OFF" position.

[29] Complete rating is NEMA 3, 3R, 4, 4X, 5, and 12.

[30] For NEMA 3R applications, remove drain screw from bottom endwall.

NEMA 7 — Indoor Hazardous Locations — Division 1 and 2, Class I, Groups C and D; Class II, Groups E, F and G; Class III

[31] NEMA 9 — Indoor Hazardous Locations — Division 1 and 2. Class ii, Groups E. F. and G. Class iii [32]

Short circuit current rating: 65 kAIR at 240 Vac, 25 kAIR at 480 Vac, and 18 kAIR at 600 Vac [33]

[34] Not cULus listed due to wire bending space.
