## Communication Adapter

Type	Function	Features
1719-AENTR	The EtherNet/IP™ adapter forms the interface between the I/O modules on the backplane and the process control system. It supports all single width and dual width I/O modules. Thereby signals from NAMUR sensors, mechanical contacts, high-power solenoid drivers, power relays, sounders, and alarm LEDs are transported to the higher-level bus system. The adapter supports HART.	<ul style="list-style-type: none"> <li>• Communication through EtherNet/IP</li> <li>• HART communication through EtherNet/IP</li> <li>• Interface between the I/O modules and the PCS/PLC</li> <li>• Installation in Zone 2 or Class I, Div. 2, or safe area</li> <li>• Nonvolatile memory for configuration and parameter settings</li> <li>• Permanently self-monitoring</li> <li>• Permits vertical or horizontal mounting in Zone 2 <sup>(1)</sup></li> </ul>

(1) If you mount the backplane vertically, position the power supplies at the top to achieve a favorable heat distribution.

## Digital Input Modules

<b>General Information</b>	
System information	IEC 60079-14 and IEC 60079-11 require that a thread dimension of at least 50 mm must always be maintained between intrinsically safe and non-intrinsically safe circuits. When using the 1719-A8 chassis with the first I/O slot next to the adapter occupied with an I/O module, install a separation plate (1719-SP1) between the adapter and the first I/O module slot to help ensure that intrinsically safe and non-intrinsically safe circuits meet the minimum distance.
Supplementary information	For detailed instructions on installing the separation plate, see 1719 Ex I/O Installation Instructions, publication <a href="#">1719-IN001</a> .
