ABOUT THE BUY AMERICA COMPLIANT PRODUCT IN THIS CATALOG

All products included in this catalog comply with the following federal “Buy America” provisions. Please note that state and local requirements may differ.

1. Buy American Act/Domestic End Products (Supplies). The articles are deemed “domestic end products”, as that term is defined in the Buy American Act of 1933, 41 U.S.C. §8302 and Federal Acquisition Regulations §52.225-1.
2. Trade Agreements Act/End Product. The articles are deemed “U.S.-made end products”, as that term is defined in the Trade Agreements Act of 1979 and Federal Acquisition Regulation §52.225-5.
3. Trade Agreements Act/ Construction Materials. The articles are deemed “domestic construction materials”, as that term is defined in the Trade Agreements Act of 1979 and Federal Acquisition Regulations §52.225-11/12.
4. Federal Highway Administration. The steel and iron components of these manufactured products are deemed manufactured entirely in the U.S. in accordance with, or are otherwise exempt from, the requirements of the FHWA’s “Buy America” requirements found at 23 U.S.C. § 313 and 23 Code of Federal Regulations §635.410.
5. Federal Transit Administration. These articles are deemed of U.S. origin, if deemed to be “COMPONENTS,” under the “Buy America” provisions of the Surface Transportation Assistance Act of 1982 (49 U.S.C. §5323(j)) and 49 Code of Federal Regulations Part 661.5(d)(2). Under the FTA’s “Buy America” requirements, a “Component” is considered to be of U.S. origin if it is manufactured in the United States, regardless of the origin of its subcomponents.

Purchasers of products in this catalog will be provided a dated certificate of compliance to the Buy America provisions above, if requested from Hubbell customer service at the time of order. If additional products are required beyond what is listed in this catalog, please contact your local Hubbell sales person or customer service representative to inquire about the availability of other products to satisfy your Buy America needs.

TOUGH ONE® ANCHOR HELIX ASSEMBLIES

TORQUE RATINGS: 10,000 FT.-LB., AND 8,000 FT.- LB.

Small Hub (2-1/4" Square Inside)

The C10252-- series of Tough One® anchors have a smaller inside hub diameter than our C10250-- series. The smaller hub is designed to be installed with the Chance anchor wrench C1021583.

Tough One® anchors give users high-strength anchor capability in all soils. You get a better anchor at an economical price.

The anchor's sloped lead point improves penetration and helps soil flow from below the hub to above the anchor.

Tough One® anchors use standard PISA® rods.

Tough One® anchors are painted with a black paint.

Use 8,000 ft.-lb. Tough One® anchor in soft and medium-hard soils

Use high-strength 10,000 ft.-lb. Tough One® anchor in hard soils

PISA® ANCHOR HELIX ASSEMBLIES

Chance Standard-Strength 4,000 foot-pound anchors and Mid-Strength 6,000 foot-pound anchors have curvilinear leading edges to help penetrate rocky soils and to reduce damage during installation. These anchors are available in single and twin-helix designs. The same installing wrench installs Standard and Mid-Strength anchors as well as TOUGH ONE® C10252- - series anchors. Anchors are painted with a black paint.

PISA® anchor installation takes about 5 minutes with two workers.

SS5 (SQUARE-SHAFT) SCREW ANCHORS

Square-Shaft “SS” multi-helix screw anchors are designed for heavy-guy loading. They have 1-1/2” square steel shafts. Extension shafts must be coupled to the helix section for installation to the proper depth.

SS screw anchors consist of three galvanized components: the lead section, the extension shaft, which includes an integral coupling, and the guy adapter. Extensions and guy adapters include a high-strength bolt and nut.

NO-WRENCH SCREW ANCHOR

For Hand or Machine Installation

Chance No-Wrench Screw Anchors may be installed by hand or machine. The Thimbleye® eye or Tripleye® eye on the rod has a large opening to admit a turning bar for screwing the anchor down. The eye will also fit into an adapter available from most hole-boring machine manufacturers so the anchor may be power-installed. The No-Wrench Screw Anchor consists of a drop-forged steel Thimbleye® eye or Tripleye® eye rod welded to a steel helix. The entire anchor is hot-dip galvanized for long resistance to rust.

No-Wrench Screw Anchors can be installed to a greater depth to reach a firmer soil by using an extension rod. Maximum installing torque is 2300 ft.-lbs. for 1-1/4" diameter rod.

"BUST" EXPANDING ANCHORS

More Holding Capacity For Less

Four different sizes are available with holding capacity as high as 40,000 pounds.

Chance "Bust" Expanding Anchors expand to take full advantage of the available area. All eight blades wedge into undisturbed earth...there is no wasted space between blades.

This anchor should be installed in relatively dry and solid soils. The effectiveness of the anchor is dependent upon the thoroughness of backfill tamping.

Failure to install within 5° of alignment with the guy load will significantly lower strength.

CROSS-PLATE ANCHOR

For Hand or Machine Installation

The Cross-Plate anchor is made for installation in holes drilled by power diggers. Because the size of the hole does not affect holding capacity, the hole can be dug by the same auger that is used to dig the pole holes on transmission projects.

Cross-Plate anchors are installed in a diagonal bored hole which is undercut so the anchor is at right angles to the guy. A rod trench is either cut with a trenching tool or drilled with a small power auger. Both anchor and rod trench should be refilled and tamped.

Holding capacities are ultimate values. An appropriate factor of safety should be used to determine the allowable or service load. Hubbell Power Systems, Inc. recommends a factor of safety of at least 2 for permanent structures

For Class 3, 4, 5, and 6 soils, the depth required to achieve the holding capacities listed in the table is 5 vertical feet to the center of the plate. For Class 7 soils, the depth required is 7 vertical feet to the center of the plate.

RODS, ANCHOR, GALVANIZED

Available for one, two, or three guys for use with expanding and cross-plate anchors. Thimbleye®, Twineye® and Tripleye® rods distribute pulling stresses uniformly over individual strands of guy wire and keep the guy wire from spreading, kinking, or bending. The drop-forged eye of each anchor rod is stronger than the rod itself. Rod length and diameter are stamped below each rod eye. Each rod is threaded 3-1/2" minimum length. Nuts included.
