General contents

EcoStruxure™
Innovation At Every Level

To be competitive in today's digital era, machine builders must be innovative. Smart machines, those that are better connected, more flexible, more efficient, and safe, are enabling machine builders to innovate in ways never before possible.

EcoStruxure, Schneider Electric's open, IoT-enabled architecture and platform, offers powerful solutions for the digital era. As part of this, EcoStruxure Machine brings powerful opportunities for machine builders and OEMs, empowering them to offer smart machines and compete in the new, digital era.

EcoStruxure Machine brings together key technologies for product connectivity and edge control on premises, and cloud technologies to provide analytics and digital services. EcoStruxure Machine helps you bring more innovation and added value to your customers throughout the entire machine life cycle.

Innovation at Every Level for Machines is full systems across three layers:

– Connected products
Our connected products for measuring, actuating, device level monitoring, and control adhere to open standards to provide unmatched integration opportunities and flexibility

– Edge Control
We are IIoT-ready with a proven set of tested and validated reference architectures that enable the design of end-to-end open, connected, and interoperable systems based on industry standards. Ethernet and OPC UA facilitates IT/OT convergence meaning machine builders reap benefits from web interfaces and cloud.

– Apps, Analytics & Services
Seamless integration of machines to the IT layer allows the collection and aggregation of data ready for analysis – for machine builders and end users alike this means increased uptime and the ability to find information faster for more efficient operations and maintenance.

These levels are completely integrated from shop floor to top floor. And we have cloud offers and end-to-end cybersecurity wrapped around.

EcoStruxure Machine makes it easier for OEMs/machine builders to offer their customers smarter machines. The advent of smart machines is driven by the changing needs of end users:

– Evolving workforce
– Reducing costs
– Dynamic markets
– Shorter life cycles
– Prioritizing functional safety and cybersecurity

EcoStruxure Machine provides one solution for the whole machine life cycle:

– With Smart Design & Engineering the time to market is reduced by up to 30% using our automated engineering and the simulation capabilities

– During Commissioning & Operation of the machine, resources such as energy, material and loss can be improved, and with seamless integration to the IT world efficiency can be improved by up to 40%

– Smart Maintenance & Services reduces the time for corrective actions up to 50%

Advanced machine performance

Powerful dynamism and scalability

Altivar Machine ATV340 is a powerful drive that aims to match your machine's motor capabilities with maximum torque and speed performance.
With an optimized speed bandwidth up to 400 Hz, the Altivar Machine ATV340 is designed for dynamic applications that may require faster acceleration or settling time.

> Robust enough to withstand high overloads, adaptable to the needs of demanding applications, it can provide up to 220% nominal torque for 2 s.

> Compatible with a wide range of motors, including asynchronous (IE2, IE3) motors, synchronous motors, and reluctance motors for various applications in closed *(1)* and open loop, to provide the adaptability and scalability your machine requires.

> Combination of ATV340 minimum application reaction time (1 ms task cycle) and Ethernet or Sercos connectivity, maximizing your machine throughput.

Accelerate operation efficiency with machine drives

Schneider Electric

Variable speed drives
Altivar Machine ATV340
Reduced machine design time
Reduced machine design time

Altivar Machine ATV340 drives will help reduce your engineering time at every stage of the process to speed up machine activation and operation.

Simplified machine engineering

Altivar Machine ATV340 accommodates numerous functions and features to simplify machine design and reduces the engineering time from selection to commissioning.

> A wealth of of interfaces, numerous I/O, multi-Ethernet protocol, Sercos protocol, PTI/PTO, embedded encoders and multiple option interfaces offer maximum flexibility in architecture design.

> Simple master/slave configuration, integrated application functions facilitate and fulfill application performance for hoisting, material handling, material working, and packaging machine segments.

Reduced machine design time helps increase operation efficiency

TVDAs are combinations of Schneider Electric best-in-class products providing typical control architectures

FDT Technology: A widely-accepted international standard

Seamless automation integration

Ready-to-use MachineStruxure application libraries that are Tested, Validated, and Documented (TVDA), combined with Ethernet services available in ATV340, will facilitate your machine design and help you significantly reduce design time.

> FDT/DTM technology helps ensure the interoperability and user-friendliness of ATV340 in architectures with third-party PLCs. For Sercos drives, FDT/DTM is used over Modbus serial line.

> One button auto-tuning for motor identification simplifies commissioning and makes it possible to replicate the complete project in a fast and seamless manner for maximum productivity in machine production.

Online tools for designing and assessing

Altivar Efficiency Calculator tool calculates the level of energy efficiency of your variable speed drive according to the Ecodesign standard EN/IEC 61800-9-2, based on 8 operating points considering torque and speed. It evaluates both Drive Efficiency (CDM Complete Drive Module) and System Efficiency (PDS Power Drive System), including the efficiency of the variable speed drive and its motor.

Calculate your level of energy efficiency with the Altivar Efficiency Calculator

EcoStruxure Motor Control Configurator tool helps you build a complete motor control solution in three steps, by selecting:

> Motor power

> Industrial segment and process

> Application

Configure your Altivar drive with the EcoStruxure™ Motor Control Configurator

Shielded copper connection cables

ConneXium shielded connection cables are available in two versions to meet the various current standards and approvals:

> **EIA/TIA 568 shielded twisted pair cables for CE market**

These cables conform to:
- EIA/TIA-568 standard, category CAT 5E
- IEC 11801/EN 50173-1 standard, class D

Their fire resistance conforms to:
- NF C32-070 standard, class C2
- IEC 322/1 standards
- Low Smoke Zero Halogen (LSZH)

> **EIA/TIA 568 shielded twisted pair cables for UL market**

These cables are:
- CEC type FT-1
- NEC type CM

A new range of **ConneXium** fully shielded preformed cordsets has been specially designed for use in harsh industrial environments.
These cordsets combine a category 5E shielded cable and RJ45 connectors reinforced with a metal profile. Please refer to Modicon Networking catalog and NEMA Contactors and Starters, Digest Section 16 catalog.

Altivar Machine ATV340
Sustained machine operation

Achilles™ Level 2 certified

Cybersecurity for your assets

Sustained machine operation

Robust design for long-lasting operation and reliable service

ATV340 has been designed to meet the needs of applications for harsh environments such as vibration, shock and non-conductive dust, and where high temperature resistance up to 60 °C/*140 °F* is needed.

Help to protect people and assets while providing continuity of service

Compliant with machine safety and cybersecurity standards, Altivar Machine ATV340 drives offer an embedded solution that can form part of your enduring protection system for your people and assets.

> Compliant with machine-related safety standards EN ISO 13849-1 and EN 62061
> Achilles Level 2 certification against cyber attacks

Fast machine recovery

The Altivar Machine 340 keeps your machine up and running with minimal downtime due to features that include:

> Fast Device Replacement (FDR) service: With the MachineStruxure architecture in place, device replacement takes just two simple steps by the service technician. Firstly, the pluggable connectors mean a new drive can be fitted in less than 3 minutes, then the drive configuration can be downloaded from the PLC in a single action.
> Data logging and monitoring by the local system or remote monitoring via the embedded Web server give users access to any motor or application-relevant data anytime, anywhere. This information can be used for predictive maintenance and to avoid breakdowns.

Communication protocol efficiency

Smart design makes the Modicon M262 the IIoT- ready controller for Logic and Motion machines.

> It offers a real-time automation fieldbus with Sercos for fast motion control, Safety functions, and openess to other devices.
> One cable simplifies the architecture and fieldbus wiring, allowing EtherNet/IP and Sercos devices to be managed on the same cable.

Adaptive Cascade Vector Control

New Motor Control method

ACVC provides better **torque accuracy** and **dynamic response**, it improves dynamic trajectory following and power consumption efficiency.
It enables:

- Improvement of torque limitation
- Precise torque control
- Smooth torque output
- Stable torque performance
- Faster the steady state, regardless the load
- Great torque performance in high speed
- Wider Speed/torque operation range

ACVC is improving all kinds of asynchronous motor applications

3 steps for improvements

New algorism enhancing the torque control

Mathematical improvement on torque control, motor fluxing and motor nonlinear model (including magnetic saturation).

Tune in Rotation by User commissioning

Enhance electrical control on field weakening and inductance online adaptation.

Cascade control by separated time scales

Different sampling time, optimizing the output performance and access better inductance in function of the rotor flux.
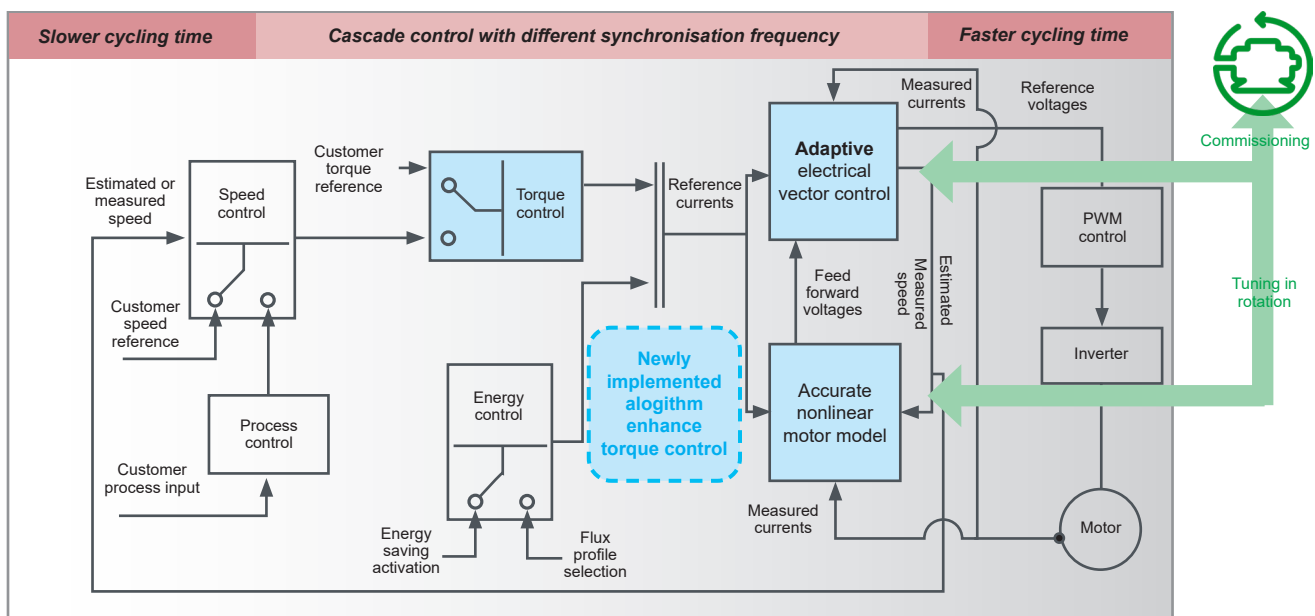

*Control mechanism with patent involved.

Schneider Electric

Variable speed drives
Altivar Machine ATV340
Adaptive Cascade Vector Control
Graphic display shows the improvement by Torque & Speed curve

Altivar 340 range up to 75 kW

Altivar 900 range from 0.75 kW up to 2.6 MW

Customer values

Torque acuracy

Up to 0.5% of nominal torque error rate and improve 25 percentage points accuracy versus traditional control methods.
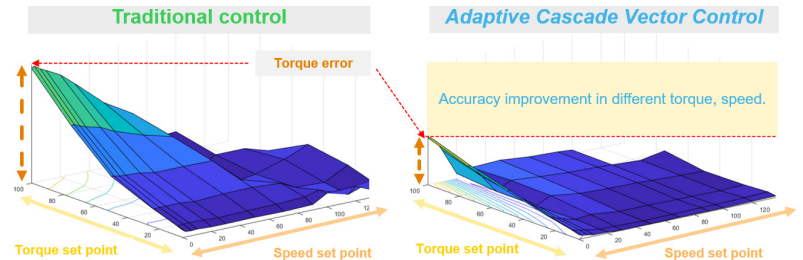

Reduce overall CAPEX and Material Cost :

■ Improve manufacturing quality by ~ 5% on final products
■ Reduce loss of raw material by ~5% during production
■ Reduce installation cost by ~10% by decreasing the amount of additional torque sensor or additional controllers

Reduce overall OPEX and potential Maintainance :

■ Less mechanical vibration damage on machines by smooth control and controllable response behavior
■ Gain more energy saving by stable output from the motor to mechanical system
■ Extend lifetime of mechanical parts, decrease OPEX and service cost

Dynamic Response

Rising time can be lower than 1ms, which is up to 40 % better than traditional control methods. It features:

■ Optimized machine dynamic performance, for applications such as Material handling, Material working and crushing process that are requiring faster response.
■ Improve manufacturing process efficiency and flexibility, it will be more adaptable within manufacturing process.
■ Even in the field-weakening area, it can increase productivity on the machine, no need to increase size of drives and related system.
■ Higher speed operational range provide machine builders more possibility.
■ It can optimize machines without additional investment, and bring more options for OEM customers in their own product lines.

Application segments	General	Material handling, packaging, textiles, hoisting, mechanical actuators, material working		Packaging, material handling, material working, hoisting		
	Specific	Conveyors, carton packers, gantry cranes, woodworking, metal processing, fans, etc.		Palletizers, shrink wrapping machines, cardboard box folding machines, standard cranes, automatic storage systems, grouping conveyors, slitters, etc.

General machine control

Machine solution

The Altivar Machine ATV340 is an IP20 high-performance variable speed drive for three-phase synchronous and asynchronous motors in open and closed loop control *(1)*. ATV340 incorporates functions and features suitable for the most common applications, including:

- Packaging
- Material handling
- Material working
- Hoisting
- Consumer packaged goods
- Textiles
- Pumping
- General machine control

Designed to meet the needs of the most demanding automation applications, the Altivar Machine ATV340 achieves high levels of machine performance and throughput. This is combined with simplicity in selection, engineering and design (automation integration), commissioning, machine mass production, and sustained machine operation, including services for machine builders.

The ATV340S, a variable speed drive with a Sercos interface, is designed and tested for a PacDrive system architecture. Typical applications are parcel handling and motion machine architectures.
The ATV340S supports the function "Open loop speed control" as a SercDrive object without license points.
The PacDrive LMC controller generates the motion profile (cyclic position setpoints over Sercos). The Sercos communication module in the ATV340 converts the position into a speed and transmits it to the drive.

The Altivar Machine ATV340 offers realtime automation capabilities, simplified machine engineering, and superior performance for industrial machine applications:
- Dynamic and powerful motor control for asynchronous, synchronous, and reluctance motors
- Drive cycle in real time for the most demanding automation requirements
- Complete integration into any system architecture by offering a native Ethernet product in real time and commonly used industrial communication fieldbuses (CANopen, PROFINET, EtherCAT, etc.). ATV340 Sercos is used in a solution approach, together with the PacDrive Controller LMC Eco or LMC Pro2.
- The drive features and dedicated application functions are the benchmark for high performance requirements
- Safe torque off (STO) with dual inputs compliant with SIL3/PLe to meet machine safety standards
- Data logging, Web server, I/O scanning, easy addressing, and many other services are possible with the Ethernet version, reducing the machine design time and improving machine operation.

The Altivar Machine ATV340 helps enhance machine performance, reduce machine design time, and maintain machine operation, meeting the needs of original equipment manufacturers by pinpointing all the vital stages of the machine lifecycle.

Schneider Electric's MachineStruxure solutions provide abundant ready-to-use, PLCopen-compliant libraries. EcoStruxure Machine Expert can be used to develop, configure, and set up an entire machine in a single software environment. Using FDT/DTM technology, it is possible to configure, control, and diagnose Altivar Machine ATV340 drives directly in EcoStruxure Machine Expert and SoMove software by means of the same software brick (DTM).

EcoStruxure Machine Expert provides verified and documented application libraries for Altivar Machine ATV340 with seamless integration under this platform. Altivar Machine ATV340 has the advantage of reducing engineering and design time for machine builders.

(1) Not supported by Sercos drives.

Variable speed drives
Altivar Machine ATV340

Packing and packaging machines

Applications

Altivar Machine ATV340 drives embed functions for high-performance machine requirements in the following applications:

Packaging

■ Control via built-in Ethernet network (Modbus TCP/IP, SERCOS III) or optional communication networks (EtherNet/IP and Modbus TCP, CANopen, PROFINET, Profibus DP V1, EtherCAT, and DeviceNet)
■ Very quick response times on transmission of a command: 1 ms (± 0.5 ms)
■ Up to 400 Hz speed bandwidth
■ Side-by-side mounting to save space inside enclosure
■ Advanced synchronous and synchronous reluctance motor open loop control achieves energy saving performance
■ Advanced induction and synchronous closed loop control for high-performance motor control

Consumer packaged goods machinery

Consumer packaged goods machinery

■ Control via built-in Ethernet network (Modbus TCP/IP, SERCOS III) or optional communication networks (EtherNet/IP and Modbus TCP, CANopen, PROFINET, Profibus DP V1, EtherCAT, and DeviceNet)
■ Very quick response times on transmission of a command: 1 ms (± 0.5 ms)
■ Up to 400 Hz speed bandwidth
■ Side-by-side mounting to save space inside enclosure
■ Advanced synchronous and synchronous reluctance motor open loop control achieves energy saving performance
■ Advanced induction and synchronous closed loop control for high-performance motor control
■ Normal duty sizing
■ PID regulator with preset reference
■ Warning monitoring functions
■ Process load monitoring function
■ Separate 24 V for control PCBA board (application function and Safety function).
In case of power outage on site, the PLC can still retrieve information with the redundant power supply via communication protocols.

Material working

Material working

■ Double STO inputs SIL3
■ Optional Safety module for operation compliant with applicable safety standards
■ Control via built-in Ethernet network (Modbus TCP/IP, SERCOS III) or optional communication networks (EtherNet/IP and Modbus TCP, CANopen, PROFINET, Profibus DP V1, EtherCAT, and DeviceNet)
■ Advanced induction and synchronous closed loop control for high-performance motor control
■ Embedded encoder input that the user can use as a speed and torque reference
■ Fastest possible controlled stop on loss of line supply
■ Motor thermal monitoring and protection function
■ Torque limitation
■ DC sharing and optional compact design regenerative braking unit (ATV regen)
■ PTO/PTI functions, achieve 1 to N gearing function depending on setting
■ 220% over torque capability, allows a more dynamic response
Material handling

Applications (continued)

Material handling

- Very quick response times on transmission of a command: 1 ms (± 0.5 ms)
- Reference via pulse input or analog input as Speed/Torque reference, to adapt hardwired onsite solution
- Control via built-in Ethernet network (Modbus TCP/IP, SERCOS III) or optional communication networks (EtherNet/IP and Modbus TCP, CANopen, PROFINET, Profibus DP V1, EtherCAT, and DeviceNet)
- Position control via limit switches with time optimization at low speed
- Multiple parameter settings via parameter set switching
- Speed and torque master/slave function
- Load sharing
- Advanced induction and synchronous closed loop control for high-performance motor control
- Advanced synchronous and synchronous reluctance motor open loop control achieves energy saving performance
- Separate 24 V for control PCBA board (application function and Safety function). In case of power outage on site, the PLC can still retrieve information with a redundant power supply via communication protocols.

Hoisting

Hoisting

- Control via built-in Ethernet network (Modbus TCP/IP, SERCOS III) or optional communication networks (EtherNet/IP and Modbus TCP, CANopen, PROFINET, Profibus DP V1, EtherCAT, and DeviceNet)
- Brake control adapted for horizontal and vertical movement
- Brake feedback management (for Safety level PLc Cat. 2 compliance)
- Dedicated speed monitoring function with embedded encoder input
- Load measurement using weight sensor
- High-speed hoisting with rope slack
- Load sharing
- Limit switch management
- Multiple motors/configurations
- High speed switching function
- DC sharing and optional compact design regenerative braking unit

Textile application

Textiles

- Control via built-in Ethernet network (Modbus TCP/IP, SERCOS III) or optional communication networks (EtherNet/IP and Modbus TCP, CANopen, PROFINET, Profibus DP V1, EtherCAT, and DeviceNet)
- Double STO inputs, up to SIL3 level
- High resolution of the digital speed reference
- Advanced synchronous and synchronous reluctance open loop control achieves energy saving performance
- Up to 400 Hz speed bandwidth with high-performance speed loop
- DC sharing and optional compact design regenerative braking unit
- Fastest possible controlled stop on loss of line supply
- Side-by-side mounting to save space inside enclosure
- High temperature operating range, up to 60 °C/*140 °F*
- 3C3 and 3S3 PCBA coating

Schneider Electric

Pumping

General machine control

Applications (continued)

Pumping
- Normal duty sizing
- Dedicated motor control law for centrifugal pumps with optimized energy saving
- Advanced synchronous and synchronous reluctance open loop control achieves energy saving performance
- PID regulator with preset reference
- 16 preset speeds
- Multi motor management
- Warning monitoring functions
- Process load monitoring function
- Error detection disable function used in specific situations such as smoke extraction
- STO function for limit pressure emergency
- Communication networks for industry and infrastructure applications
- Separate 24 V for control PCBA board (application function and Safety function). In case of power outage on site, the PLC can still retrieve information with a redundant power supply via communication protocols.

General machine control
- Control via built-in Ethernet network (Modbus TCP/IP, SERCOS III) or optional communication networks (EtherNet/IP and Modbus TCP, CANopen, PROFINET, Profibus DP V1, EtherCAT, and DeviceNet)
- Separate 24 V for control PCBA board (application function and Safety function). In case of power outage on site, the PLC can still retrieve information with a redundant power supply via communication protocols.
- PID regulator
- 16 preset speed functions
- +/- speed
- Reference operation
- Line contactor and output contactor control
- Speed or torque control with current/torque limitation
- Speed and torque master/slave function, load sharing
- DC sharing and optional compact design regenerative braking unit
- Embedded encoder input that the user can use as a speed and torque reference
- Advanced motor control laws: V/F 5 points, sensorless vector control, synchronous permanent magnet motor control, synchronous reluctance motor control, and energy saving, allow users to configure different machine behaviors
- Embedded Web server for advanced maintenance (IoT-ready)

ATV340U22N4 (1)   *ATV340U75N4 (1)*

ATV340U22N4E (1)   *ATV340U75N4E (1)*   *ATV340D22N4E (1)*

ATV340U22N4S   *ATV340U75N4S*   *ATV340D22N4S*

ATV340D37N4E (1)   *ATV340D75N4E (1)*
- Heavy duty operating mode
- Normal duty operating mode

Note:
For ATV340U07...D22N4● drives, x In = 1.1 In
For ATV340D30...D75N4E drives, x In = 1.2 In
For ATV340U22...U75N4S drives, x In = 1.1 In

The offer

The Altivar Machine ATV340 range of variable speed drives covers motor power ratings from 0.75 kW/*1 HP* to 75 kW/*100 HP* in heavy duty, with 3 product types: Modular, Ethernet and Sercos products:

■ 380 V…480 V three-phase, 0.75 kW/*1 HP* to 22 kW/*30 HP* covers Modular type (**ATV340U07N4** to **ATV340D22N4**)
■ 380 V…480 V three-phase, 0.75 kW/*1 HP* to 75 kW/*100 HP* covers Ethernet type (**ATV340U07N4E** to **ATV340D75N4E**)
■ 380 V…480 V three-phase, 0.75 kW/*1 HP* to 22 kW/*30 HP* covers Sercos type (**ATV340U07N4S** to **ATV340D22N4S**)

The Modular type is designed to accommodate the majority of commonly-used industrial fieldbus protocols for simple integration in various automation architectures. References ending with "E" indicate the Ethernet version product with multi-protocol Ethernet embedded. The multi-Ethernet protocol consists of EtherNet/IP and Modbus TCP communication interfaces.

All three versions have a book format up to 7.5 kW/*10 HP* and all sizes can be mounted side by side in order to optimize the machine footprint.
The Altivar Machine ATV340 range is designed to withstand harsh ambient conditions, as references comply with IEC 60721-3-3 Class 3C3 and 3S3 and can operate up to 60 °C/*140 °F* with derating and 50 °C/*122 °F* without derating as standard.

The Altivar Machine ATV340 drives integrate Modbus serial line communication protocols as standard. Each device is equipped with 2 RJ45 ports dedicated to:
■ Drive connection for configuration software
■ Connecting an HMI (keypad) to the drive

In addition, the ATV340 Ethernet drives contain dual RJ45 port multi-Ethernet protocol. The multi-Ethernet protocol integrates EtherNet/IP and Modbus TCP as standard.
The Ethernet drives are able to accommodate 2 slots for option modules serving different purposes.
■ GP – SF slot dedicated to optional Safety function module and additional I/O module
■ GP – ENC slot designed to take an encoder option module or additional I/O module

Modular drives ATV340U●●N4 are equipped with 3 slots for optional modules, the GP – FB slot being the only difference from the ATV340 Ethernet drive.
■ The GP – FB slot can be used for a communication option module to control the drive. ATV340 Modular drives are compatible with the communication interfaces below (see):
  □ CANopen
  □ PROFIBUS DP V1
  □ DeviceNet
  □ EtherCAT
  □ PROFINET
  □ POWERLINK

Heavy duty sizing as standard

Altivar Machine ATV340 drives are sized heavy duty as standard. In the case of lower cycle applications (requiring lower starting current) ATV340 drives can also be sized as normal duty:
■ Heavy duty: Dedicated mode for applications requiring significant overload (up to 1.5 In for 60 s and up to 1.8 In *(2)* for 2 s), the recommended drive selection is standard sizing.
■ Normal duty: Dedicated mode for applications requiring slight overload (up to 1.2 In for 60 s and up to 1.35 In for 2 s), the recommended drive selection is one rating lower. For more details please refer to the ATV340 Installation manual.

### Torque/Speed accuracy

■ Speed accuracy
  □ +/- 10% of nominal slip 0.2 Tn to Tn torque variation without speed feedback
  □ +/- 0.01% of nominal speed 0.2 Tn to Tn torque variation in closed-loop mode with encoder feedback
■ Torque accuracy
  □ +/- 10% in open-loop mode, without speed feedback
  □ +/- 5% in closed-loop mode with encoder feedback
■ Transient overtorque capability
  □ 220% of nominal motor torque +/- 10% for 2 s
 □ 180% of nominal motor torque +/- 10% for 60 s

(1) Drives are shown with optional plain text display, which can be ordered as an add-on.
(2) See the selection table on page 22.

Schneider Electric
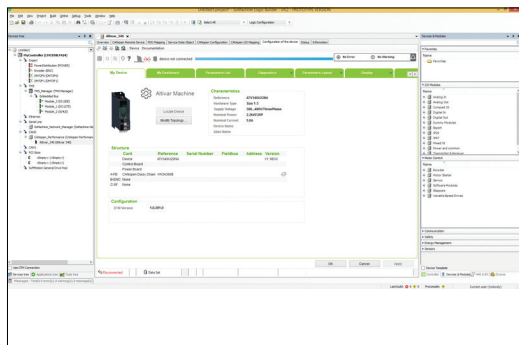

Altivar Machine DTM in EcoStruxure Machine Expert

Embedded Web server login screen

Integration

Fieldbus protocols

■ EtherNet/IP and Modbus/TCP dual port *(1)* and Modbus serial link:
□ Standard Modbus and Ethernet protocols
■ Sercos dual port and Modbus serial link
■ Connection of configuration and runtime tools
■ Control of the Altivar Machine ATV340 in automation architectures (PLCs, IPCs, HMIs, etc.) in industrial network protocols for reading/writing data *(2)*:
□ Diagnostic, supervision, and fieldbus management functions
■ Ethernet services:
□ SNMP, SNTP, BootP & DHCP, IP v6, cybersecurity services, FDR
□ Open Ethernet topologies

Integration of configuration and runtime tools

■ FDT/DTM technology (see):
□ Drive configuration, diagnostics, and control using EcoStruxure Machine Expert software with Modicon Machine Solution controllers
□ Drive configuration, diagnostics, and control using EcoStruxure Machine Expert software with PacDrive Machine Solution controllers, for Sercos drive

Dialog and configuration tools

■ LED display terminals on front:
□ Monitoring drive status
■ Graphic display terminal (see) *(3)*:
□ Drive control, adjustment, and configuration
□ Display of current values (motor, I/O, etc.)
□ Configuration storage and download
□ Duplication of one drive configuration on another drive from a PC or another drive
□ Connection to several drives using multidrop link components
■ Embedded Web server (see) *(4)*:
□ Easily accessible from any PC, iPhone, iPad, Android system, and major Web browsers
□ Network diagnostics in real time
□ Read/write values
■ SoMove software (see):
□ Advanced functions for configuration, setup, and maintenance of Altivar Machine drives

Accessories and replacement parts

Accessories

■ Display terminal:
□ Plain text display for direct or remote mounting (see)
□ Graphic display terminal for extended mounting (see)
□ Remote mounting kit for mounting on enclosure door (see)
□ Multidrop connection accessories for connecting several drives to the RJ45 terminal port (see)
■ Drive-to-drive plus connection accessories (see) *(4)*
■ Flange mounting kit: design for evacuating dissipated heat through the power section by mounting the power part outside an electrical cabinet (see)
■ Daisy chain DC bus sharing cable for cost-optimized installations, to create a simple DC bus link (see)

Replacement parts

■ Fan kit (see)
■ Connector kits for I/O, motor, and power connection (see)

---

(1) Ethernet devices only.
(2) See previous page for compatible automation fieldbuses in addition to EtherNet/IP and Modbus TCP.
(3) There are 2 possible options for display: mounting on the drive or mounting on the enclosure door using the mounting kit and extension accessories.
(4) Not supported by Sercos drive.

Inserting relay module VW3A3204 into slot GP-SF of the Ethernet ATV340 drive, ATV340U07N4E

Options

■ Modules (see page 37):
□ Encoder modules (see page 37):
- Digital interface encoder module 5/12 V
- Resolver interface module
- Analog interface encoder module
□ Additional I/O (see page 38):
- 2 analog inputs
- 6 digital inputs
- 2 digital outputs
- 3 NO contacts with relay output
□ Safety Modules
- Safety module Advanced
- CIP Safety
- PROFIsafe
□ Communication (see page 39) (1):
- CANopen: RJ45 daisy chain, SUB-D, 5-way screw terminals
- PROFINET
- Profibus DP V1
- EtherCAT
- DeviceNet
- POWERLINK
■ Braking resistors (see page 49)
■ Additional EMC input filters for reducing conducted emissions on the AC supply (see page 51)
■ Line chokes to reduce the THDi of a system (see page 53)

Motor starters

Schneider Electric offers combinations of circuit breakers and contactors so that Altivar Machine drives can be used in optimum conditions (see page 59).
For prospective line short-circuit currents up to 100 kA, please contact our Customer Care Center.

Standards and certifications

Altivar Machine ATV340 drives have been developed to conform to the international standards and recommendations relating to industrial electrical control devices (IEC), in particular:
■ UL508C/UL61800-5-1
■ IEC 61800-3:
□ EN/IEC 61800-3, Environments 1 category C2
□ EN/IEC 61800-3, Environments 2 category C3
■ EN/IEC 61800-5-1
■ IEC 60721-3
■ IEC 61508
■ IEC 13849-1
■ Green Premium, Reach/RoHS

Altivar Machine ATV340 drives are certified:
■ UL
■ CSA
■ TÜV Rheinland
■ Green Premium, RoHS EU, China

They are CE marked according to the European low voltage (2014/35/EU) and EMC (2014/30/EU) directives.

(1) Not supported by Sercos drives.

Schneider Electric
ATV340 Ethernet drive equipped with plain text display terminal

Description

1 Power supply terminals

2 I/O connection *(1)*:

■ 5 digital inputs:

□ Configurable as positive digital input (source) or negative digital input (sink) compliant with IEC61131-2 PLC standards:

□ 24 V ⎓, impedance 4.4 kΩ, sampling time 1 ms +/- 250 µs, response time 1 ms

■ 2 digital inputs or outputs:

□ Configurable and compliant with IEC61131-2 PLC standards

□ 24 V ⎓, sampling time 2 ms, maximum voltage 30 V, maximum current 100 mA

■ 2 relay outputs: R1 (3 NO and NC contacts) and R2 (2 NC contacts)

□ R1 - 1 NC contact and 1 NO contact with common point, minimum switching capacity 5 mA for 24 V ⎓, maximum switching capacity 3 A on resistive load, 2 A on inductive load for 250 V ∿ or 30 V ⎓

□ R2 - 1 NC contact, maximum switching capacity 5 A on resistive load

■ 2 analog inputs:

□ 1 configurable (voltage/current/PTC-PT100) analog input, by programming X and Y from 0 to 20 mA

□ 1 bipolar ± 10 V ⎓ analog input, sampling time 250 µs

■ 1 analog output, 2 ms +/-0.5 ms sampling time and 10-bit resolution, configurable as:

□ Voltage analog output 0…10 V ⎓, minimum load impedance 470 Ω

□ Current analog output "x to y" mA, maximum load impedance 500 Ω

3 Plain text display terminal (can be mounted as an option)

4 Modbus Serial line RJ45 port

5 DC Bus connection link *(2)*

6 Motor and braking resistor connector

7 Encoder feedback interface is compatible with RS422 incremental (A/B/I) and Sin/Cos 1 Vpp (SC) interfaces, 5 V, 12 V, and 24 V supply voltage *(3)*

8 Pulse train output (PTO) and pulse train input (PTI) interface can be used to control the drive via PLC or using hardwired master/slave applications. The interface is equipped with 2 RJ45 ports and the pulse counter can be set at 0...200 kpps *(4)* *(7)*

9 Safe torque off (STO) dual input SIL3/PLe and 24 V ⎓ supply in/out

10 GP – SF slot for Safety option module *(7)* or additional I/O module (see page 38) *(5)*

11 GP – ENC slot for encoder interface module (see page 37) or additional I/O module (see page 38)

12 GP – FB slot for communication option module (see page 42) *(6)* or additional I/O module (see page 38) or Sercos communication module *(8)*

(1) ATV340D30N4E to ATV340D75N4E references have 8 digital inputs (positive or negative logic), 1 assignable digital output, 3 analog inputs configurable as voltage or current, including 2 for probes (PTC, PT100, PT1000, or KTY84), 2 analog outputs configurable as voltage (0..10 V) or current (0-20 mA), and 3 relay outputs - 1 with NO/NC and 2 with NO contacts.

(2) ATV340D30N4E to ATV340D75N4E references: DC bus connection is possible but not located on the front of the product; for more details please refer to the ATV340 Installation manual.

(3) ATV340D30N4E to ATV340D75N4E references require an encoder option module for closed loop operation.

(4) ATV340D30N4E to ATV340D75N4E references do not have PTI/PTO for master/slave operation. Drive-to-drive link via Ethernet or analog inputs and outputs can be used.

(5) ATV340D30N4E to ATV340D75N4E references have different option slot positions; for more details please refer to the ATV340 Installation manual.

(6) ATV340●●●N4E references are equipped with dual port EtherNet/IP and Modbus TCP communication, communication option modules can be inserted in ATV340D30N4E...D75N4E references. For more details please refer to the ATV340 Installation manual.

(7) Not supported by Sercos drives.

(8) Sercos drives only.

(1) Altivar Machine ATV340U07...D22N4E drives integrate a category C3 EMC filter with 20 m/66 ft shielded motor cable.
ATV340D30...D37N4E drives integrate a category C2 EMC filter with 50 m/164 ft motor cable and category C3 EMC filter with 150 m/492 ft motor cable.
ATV340D45...D75N4E drives integrate a category C3 EMC filter with 150 m/492 ft shielded motor cable.
(2) These values are given for a nominal switching frequency of 4 kHz up to **ATV340D37N4E** (2.5 kHz for **ATV340D45N4E**...
ATV340D75N4E), for use in continuous operation. The switching frequency is adjustable. Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves in *ATV340 Installation manual*).
(3) Typical value for the indicated motor power and for the prospective line Isc.
(4) For ATV340U07...D22N4● values given for applications requiring slight overload (up to 135% for 2 s and 110% for 60 s).
For ATV340D30...D75N4● values given for applications requiring slight overload (up to 120% for 60 s).
(5) For ATV340U07...D22N4● values given for applications requiring significant overload (up to 180% for 2 s and 150% for 60 s).
For ATV340D30...D75N4● values given for applications requiring significant overload (up to 150% for 60 s).

Note: Drives are shown with optional plain text display, which can be ordered separately as an add-on.
Consult the summary tables of possible drive, option, and accessory combinations (see *page 33*).
Ambient temperature range:
■ For normal duty operation mode:
□ ATV340U07...D22N4E -15...40 °C/5...104 °F without derating (up to 60 °C/140 °F with derating)
□ ATV340D30...D75N4E -15...50 °C/5...122 °F without derating (up to 60°C/140 °F with derating)
■ For heavy duty operation mode:
□ ATV340U07...D22N4E -15...50 °C/5...122 °F without derating (up to 60 °C/140 °F with derating)
□ ATV340D30...D75N4E -15...50 °C/5...122 °F without derating (up to 60°C/140 °F with derating)
For more details regarding the thermal capacity of references, please visit *our website*.
■ Transportation and storage temperature range for ATV340U07...D75N4● -40...70 °C/-40...158 °F in dry and dust-free environment.

Connection accessories

Daisy chain connection of the DC bus *(1)*

The DC bus can be connected in a daisy chain in the following cases:
■ Drives powered by the AC supply with parallel connection of the DC bus in order to balance the loads during braking phases between the drives; used in addition to braking resistors (see page 49)
■ Drives powered by the DC bus only
This requires the connection accessories listed below *(2)*:

Presentation, references

Variable speed drives
Altivar Machine ATV340
Configuration and runtime tools
Plain text display terminal

Plain text display terminal

The plain text display terminal can be ordered separately, and can be:
■ Connected and mounted on the front of the drive
■ Connected and mounted on an enclosure door using a remote-mounting accessory

This terminal is used to:
■ Control, adjust, and configure the drive
■ Display current values (motor, I/O, and machine data)
■ Store and download configurations (several configuration files can be stored in the memory)
■ Duplicate the configuration of one powered-up drive on another powered-up drive

Other features:
■ Displaying the device - via Web server and password; a display terminal is required to log in to the Web server for the first time
■ Realtime clock providing data acquisition and event time-stamping functions
■ 2 lines
■ Languages (Chinese, English, French, German, Italian, Spanish)
■ White backlit LCD screen
■ Operating range: -15...50 °C/*+5...122 °F*
■ IP21 protection
■ Removable, easy plug-in with RJ45 port

Description

The front of the display terminal comprises:
1 LCD backlight screen
2 OK button: saves the current value (ENT)
3 RUN button: local control of motor run command
4 STOP/RESET button: local control of motor stop command/clearing detected errors
5 ESC button: aborts a value, parameter, or menu to return to the previous selection
6 Home: root menu
7 Turn ±: navigation dial, increases or decreases the value, goes to the next or previous line

Remote-mounting kit for mounting plain text display terminal on enclosure door (front panel)

Remote-mounting kit for mounting plain text display terminal on enclosure door (rear panel)

Mounting kit for plain text display terminal
■ Remote-mounting kit for mounting on an enclosure door with IP43 degree of protection as standard

Description
The kit comprises:
- Tightening tool (also sold separately under the reference ZB5AZ905)
1 Mounting plate
2 RJ45 port for the plain text display terminal
3 Seal
4 Fixing nut
5 RJ45 port for connecting the remote-mounting cordset
Cordsets should be ordered separately depending on the length required.
Drilling a hole with a standard Ø 22 tool, as used for a pushbutton, allows the unit to be mounted without the need for a cut-out in the enclosure (Ø 22.5 mm/Ø 0.89 in. drill hole).

An anti-rotation function is provided that works as follows: when the kit is locked tightly onto the panel by the nut, the gasket on the back cannot rotate.

Graphic display terminal

This terminal can be:
- Connected and mounted on an enclosure door using a remote-mounting accessory
- Connected to a PC to exchange files via a Mini USB/USB connection *(1)*
- Connected to several drives in multipoint mode

This terminal is used to:
- Control, adjust, and configure the drive
- Display current values (motor, I/O, and machine data)
- Display graphic dashboards such as the energy consumption monitoring dashboard
- Store and download configurations (several configuration files can be stored in the 16 MB memory)
- Duplicate the configuration of one powered-up drive on another powered-up drive
- Copy configurations from a PC or drive and duplicate them on another drive (the drives should be powered up throughout the duplication operations)

Other characteristics:
- Up to 24 languages (complete alphabets) covering the majority of countries around the world (languages can be removed, added and updated according to user needs; please consult our website)
- 2-color backlit display (white and red); if an error is detected, the red backlight is activated automatically (function can be disabled)
- Operating range: -15…50 °C/+5…122 °F
- Degree of protection: IP65
- Trend curves: Graphic display of changes over time in monitoring variables, energy data, and machine data
- Realtime clock with 10-year backup battery providing data acquisition and event time-stamping functions even when the drive is stopped

Multipoint screen

The graphic display terminal is connected to one drive only. However, communication is possible between a graphic display terminal and several Altivar drives (ATV340, ATV600, and ATV900) connected on the same Modbus serial fieldbus via the RJ45 port (HMI or Modbus serial). In this case, multipoint mode is automatically applied to the graphic display terminal.

A maximum of 32 drives can be connected on the same Modbus serial fieldbus.

Apart from the Stop function linked to the STOP/RESET key, multipoint mode cannot be used to apply a reset after a fault has been detected or control the drive via the graphic display terminal: in multipoint mode, the Run key and the Local/Remote key are disabled.

Description

Display:
- 8 lines, 240 x 160 pixels
- Displays bar charts, gages, and trend charts
- 4 function keys to facilitate navigation and provide contextual links for enabling functions
- STOP/RESET button: Local control of motor stop command/clearing detected errors
- RUN button: Local control of motor run command
- Navigation buttons:
- □ OK button: Saves the current value (ENT)
- □ Turn ±: Increases or decreases the value, goes to the next or previous line
- □ ESC button: Aborts a value, parameter, or menu to return to the previous selection
- □ Home: Root menu
- □ Information (i): Contextual help

Accessories for graphic display terminal

■ Remote-mounting kit for mounting on enclosure door with IP65/UL Type 12 degree of protection as standard

The kit comprises:
- Tightening tool (also sold separately under the reference ZB5AZ905)
1 Cover plate to maintain IP65 protection when there is no terminal connected
2 Mounting plate
3 RJ45 port for the graphic display terminal
4 Seal
5 Fixing nut
6 Anti-rotation pin
7 RJ45 port for connecting the remote-mounting cordset (10 m/*32.8 ft* maximum)
Cordsets should be ordered separately depending on the length required.
8 Grounding connector

Drilling a hole with a standard Ø 22 tool, as used for a pushbutton, allows the unit to be mounted without the need for a cut-out in the enclosure (Ø 22.5 mm/*Ø 0.89 in.* drill hole).

Configuration and runtime tools
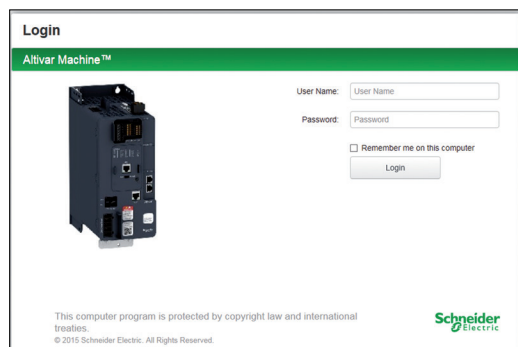

Login screen
Customizable widgets
Drive parameters tab
Energy dashboard

Web server
Presentation

■ The Web server can only be accessed via an Ethernet-embedded drive ATV340●●●N4E
□ Connection of a drive that is not a part of an Ethernet network
  - Wired connection via an Ethernet cable using the drive Ethernet port
  - Wireless connection via Schneider Electric WiFi dongle
□ Connection of a drive that is part of an Ethernet network
  - From any point on the network by entering the drive IP address

■ The Web server is used for:
□ Commissioning the drive (setting configuration parameters and enabling the main functions)
□ Monitoring energy and machine data, as well as drive and motor data
□ Diagnostics (drive status, file transfer, detected error and warning logs)

Description

The Web server is structured around five tabs.

■ "My dashboard" tab:
□ Configurable using a wide range of widgets; groups the information and dashboards selected by the user together on one page
□ Graphics, charts, and monitoring tables can be customized to provide a user-friendly interface

■ "Display" tab:
□ Monitors energy indicators, efficiency, and performance
□ Displays time-stamped application data such as motor current or temperature
□ Monitors drive parameters and status
□ Shows the I/O state and assignment

■ "Diagnostics" tab:
□ Drive status
□ Time and date-stamped warning and detected error logs
□ Network diagnostics
□ Access to drive self-tests

■ "Drive" tab:
□ Viewing the main drive parameters
□ Editing the main drive parameters

■ "Setup" tab:
□ Network configuration
□ Access management
□ Transferring and retrieving drive configurations
□ Exporting data acquisition files and logs
□ Customizing pages (colors, logos, etc.)

Other characteristics:
■ Ease of connection via the RJ45 port or WiFi connection
■ Password-protected authentication (modifiable password; access rights can be configured by administrator)
■ No specific tool required or installation necessary, just connect to the Web browser from a drive (using standard Ethernet cable or WiFi dongle)
■ Web server can be disabled
■ Works in a similar way on PCs, iPhones, iPads, Android systems, and the major Web browsers:
□ Internet Explorer® (version 8 or higher)
□ Google Chrome® (version 11 or higher)
□ Mozilla Firefox® (version 4 or higher)
□ Safari® (version 5.1.7 or higher)

DTM
Presentation

Using FDT/DTM technology it is possible to configure, control, and diagnose Altivar Machine drives directly in EcoStruxure Machine Expert and SoMove software by means of the same software brick (DTM).

FDT/DTM technology standardizes the communication interface between field devices and host systems. The DTM contains a uniform structure for managing drive access parameters.

Altivar Machine DTM in EcoStruxure Machine Expert

Transfer all parameters +
Safety configuration

SoMove software

Safety function transfer and configuration

Specific functions of the Altivar Machine DTM

- Offline or online access to drive data
- Transferring configuration files from and to the drive
- Customization (dashboard, My Menu, etc.)
- Access to drive parameters and option cards
- Oscilloscope function
- Energy and application data dashboards
- Detected error and warning logs (with time-stamping)
- Configuration, transfer, and monitoring of the Safety functions

Advantages of the DTM in EcoStruxure Machine Expert:
- Single tool for configuration, setup, and diagnostics
- Network scan for automatic recognition of network configuration in Ethernet architectures *(1)*
- Ability to add/remove, copy/paste configuration files from other drives in the same architecture
- Single input point for all parameters shared between the PLC (programmable logic controller) and the Altivar Machine drives
- Creation of drive profiles for implicit communication with the PLC as well as dedicated profiles for programs with DFBs (derived function blocks)
- Integration in the fieldbus topology
- Drive configuration is an integral part of the EcoStruxure Machine Expert project file
- Application function block for EcoStruxure Machine Expert PLC
- Display visualization blocks for Vijeo Designer

Advantages of the DTM in SoMove:
- Drive-oriented software environment
- Wired connection to the Ethernet communication port
- Standard cable (file transfer performance)

- Third-party software and downloads:
The Altivar Machine ATV340 DTM is a flexible, open, and interactive tool that can be used in a third-party FDT.
DTM Library can be downloaded from our website.

SoMove software
Presentation

SoMove software for PC is used to configure, set up, and maintain Altivar Machine drives.

In addition to the functions offered by the Web server, SoMove software features the oscilloscope function for accurate display of data samples, as well as access to multi-drive applications.

Altivar Machine in SoMove

SoMove software

The software can be connected to Altivar Machine ATV340 variable speed drives via:
- A direct USB/RJ45 cable (Modbus serial) link
- Ethernet Modbus and WiFi connection with the WiFi dongle **TCSEGWB131W**
- Ethernet Modbus TCP connection

For ATV340 Sercos drives, DTM is used with SoMove over Modbus Serial line only. For more information on SoMove setup software, please refer to the SoMove: Setup Software catalog.

(1) Only applicable for ATV340 Ethernet drives, ATV340●●●N4E.

Presentation

Altivar Machine ATV340 variable speed drives from ATV340U07…D22N4● have an on-board encoder interface. The on-board encoder interface **1** supports RS422 for A/B/I incremental and 1 Vpp for Sin/Cos signals.
References from ATV340D30…D75N4E● do not have an on-board encoder interface, however optional encoder modules can be used for flux vector control operation with sensor (FVC mode) for asynchronous motors, or for vector control operation with speed feedback (FSY mode) for synchronous motors.

They improve drive performance irrespective of the motor load state:
■ Zero speed torque
■ Accurate speed regulation
■ Torque accuracy
■ Shorter response times on a torque surge
■ Improved dynamic performance in transient state
For asynchronous motors, encoder interface modules improve static speed accuracy in different control modes (voltage vector control, voltage/frequency ratio).
Depending on the model, encoder interface modules can also be used for monitoring, irrespective of the control type:
■ Overspeed detection
■ Load slipping detection
They can also transmit a reference value provided by the encoder input to the Altivar variable speed drive. This specific feature is used to synchronize the speed of several drives. The encoder options have a thermal sensor input to monitor one standard temperature sensor.
Three modules are available depending on the encoder technology:
■ Resolver encoder
■ Encoder with digital output
■ Encoder with analog output
The Altivar variable speed drive can only be equipped with one of the encoder interface modules. The interface encoder module is inserted in a dedicated slot (see).
It is protected against encoder supply short-circuits and overloads.

ATV340 Ethernet drives equipped with plain text display terminal

VW3A3203

VW3A3204

Additional I/O modules

Presentation

By installing additional I/O modules Altivar Machine drives can be adapted to meet the needs of applications that manage additional sensors or specific sensors.

Two additional modules are available:
- The extended I/O module, with digital and analog I/O
- The extended relay module, with relay outputs

These modules are inserted in slots 1 and 2 on Altivar Machine drives:
1 GP-SF slot for additional I/O or Safety function modules
2 GP-ENC slot for additional I/O or encoder modules
3 GP-FB slot for additional I/O or communication option modules

Extended I/O module

- 2 differential analog inputs configurable via software as current
(0-20 mA/4-20 mA), or for PTC, PT100, or PT1000 probes, 2- or 3-wire
- 14-bit resolution
- 6 x 24 V $---$ positive or negative digital inputs
- Sampling: 1 ms max
- 2 assignable digital outputs
- 2 removable spring terminal blocks

Extended relay module

- 3 relay outputs with NO contacts
- 1 fixed screw terminal block

Additional I/O modules

Description	I/O type				Reference	Weight
	Digital inputs	Digital outputs	Analog inputs	Relay outputs		kg/*lb*
Extended I/O module	6	2	2 *(1)*	–	**VW3A3203**	–
Extended relay module	–	–	–	3 *(2)*	**VW3A3204**	–

(1) Differential analog inputs configurable via software as current (0-20 mA/4-20 mA), voltage (+/- 10V), or for PTC, PT100, or PT1000 probes, 2- or 3-wire. When configured as PTC probe inputs, they must never be used to protect an ATEX motor in applications in explosive atmospheres. Please refer to the ATEX guide on our website.
(2) NO contacts.

Note*: The extended I/O and relay modules can be placed in slot A or slot B for reference ATV340D30...D75N4E● on Altivar Machine ATV340 variable speed drives. For more details, please refer to the instruction sheets, EAV76404 and EAV76405.*
Two modules of the same type cannot be inserted in Altivar Machine ATV340 variable speed drives.

Schneider Electric

Variable speed drives
Altivar Machine ATV340
Communication buses
ATV340 Ethernet drive equipped with plain text display terminal

ATV340 Sercos drive equipped with plain text display terminal

Presentation

Altivar Machine ATV340 drives are designed to meet configuration requirements found in the main industrial communication installations.

ATV340 variable speed drives have a Modbus serial line port **2** as standard, a single port for connecting the display, and a single port for connection to the configuration tool. ATV340●●●N4E● Ethernet-type drives are equipped with multi-Ethernet protocol. EtherNet/IP and Modbus TCP are available as standard with dual RJ45 ports **4**. ATV340●●●N4S drives are equipped with a Sercos protocol as standard with dual RJ45 ports **5**.

Modbus serial link

There are two ports using Modbus RTU protocol for connecting to the HMI and commissioning.

The HMI serial link port is designed for simple integration of the Harmony HMI terminal:
■ Harmony HMI terminal
■ Remote plain text display terminal **1**, remote graphic display terminal

The commissioning port **2** is used to configure the parameters or monitor the status of the variable speed drive, using SoMove setup software

Dual port multi-Ethernet communication

Altivar Machine ATV340 Ethernet drives integrate the EtherNet/IP and Modbus TCP communication protocols as standard.

■ EtherNet/IP and Modbus TCP dual port **4**

This offers the standard services regularly used in industrial networks: connection to the Modbus TCP or EtherNet/IP network

■ EtherNet/IP adapter including standard CIP objects (AC/DC drive objects, CIP energy objects, etc.), compliant with ODVA specification
■ The RSTP connection allows ring topology to help ensure continuity of service.
■ The dual port allows daisy-chain connection to simplify cabling and network infrastructure (no need to use a switch).
■ Modbus TCP message handling is based on the Modbus protocol and is used to exchange process data with other network devices (e.g., a PLC). It provides ATV340E drives with access to the Modbus protocol and to the high performance of the Ethernet network, which is the communication standard for numerous devices.
■ SNMP (Simple Network Management Protocol) offers standard diagnostics services for network management tools.
■ The FDR (Fast Device Replacement) service allows automatic reconfiguration of a new device installed to replace an existing device.
■ Device security is reinforced by disabling some unused services as well as managing a list of authorized devices.
■ Setup and adjustment tools (SoMove, EcoStruxure Machine Expert with DTM) can be connected locally or remotely.
■ The embedded Web server is used to display operating data and dashboards as well as to configure and diagnose system elements from any Web browser.

These numerous services offered by Altivar Machine ATV340E drives simplify integration into Schneider Electric machine automation controllers such as M241 and M251.

Altivar Machine ATV340 Sercos drives integrate the Sercos communication protocols as standard.

■ Sercos dual port **5**

This offers the standard services regularly used in industrial networks: connection to Sercos network

■ Sercos allows ring topology to help ensure continuity of service.
■ The dual port allows daisy chain connection to simplify cabling and network infrastructure (no need to use a switch).
■ The FDR (Fast Device Replacement) service allows a user reconfiguration of a new device installed to replace an existing device.
■ Setup and adjustment tools (SoMove with DTM over Serial Line) can be connected.

Communication modules for industrial applications

The following communication modules are available as options *(1)*:
■ CANopen
■ PROFIBUS DP V1
■ DeviceNet
■ EtherCAT
■ PROFINET
■ POWERLINK

(1) Not compatible with Sercos drive.

Example of Modbus diagram with connection via splitter box and RJ45 connectors

Description

Altivar Machine ATV340 drives have been designed to simplify connections to communication buses by means of the following:
1 Integrated RJ45 communication port for HMI on the front
2 Integrated RJ45 communication port for Modbus on the front
3 Slots available for the additional I/O modules (see page 38), encoder modules (see page 37), and Safety function module (see page 35)
4 Slots available for inserting communication modules in ATV340 modular drives, ATV340●●●N4

Functions

Altivar Machine ATV340 drive functions can be accessed via the communication buses:
■ Control
■ Monitoring
■ Adjustment
■ Configuration

The speed reference and command may come from different sources:
■ Digital input or analog I/O terminals
■ Communication bus
■ Remote/Local display terminals
■ PTI interface *(1)*

As one of the advanced functions, ATV340 drive control sources can be managed and switched according to the application requirements.
The communication periodic I/O data assignment can be selected using the network configuration software.
The ATV340 Modular and Ethernet drives can be controlled:
■ According to the CiA 402 native profile
■ According to the I/O profile
The ATV340 Sercos drives are controlled by Sercos.

Communication is monitored according to criteria specific to each protocol.
Regardless of protocol type, the response of the drive to a detected communication interruption can be configured as follows:
■ Freewheel stop, stop on ramp, fast stop, or braked stop
■ Maintain the last command received
■ Fallback position at a predefined speed
■ Ignore the detected error

Variable speed drives

Altivar Machine ATV340
Option: Safety modules
Activation of the SS1 function
Activation of the SLS function
Activation of the SBC function
Activation of the SMS function
VW3A3802 Safety module

VW3M8820

Presentation

The Safety Module Advanced allows ATV340 variable speed drives to access additional Safety functions.

This creates a complex functional Safety device that helps to provide installation monitoring.

The Safety Module Advanced optimizes the overall cost of the installation by avoiding the need for additional external devices, while conforming to international safety standards. As a result, wiring is cheaper and quicker.

It also improves performance during maintenance by reducing machine or installation downtime and helps to ensure work is carried out in compliance with safety standards.

It includes the following Safety functions compliant with standard IEC/EN 61800-5-2.
- Safe Stop 1 (SS1)
- Safe Limited Speed (SLS)
- Safe Brake Control (SBC)

In addition, the Safety Module Advanced includes two additional Safety functions.
- Safe Maximum Speed (SMS)
- Guard Door Locking (GDL)

Safety functions

Safe Stop 1 (SS1) function

The SS1 integrated Safety function causes a category 1 safe stop.
This function monitors deceleration according to a dedicated deceleration ramp and safely shuts off the torque once standstill has been achieved.

Safe Limited Speed (SLS) function

The SLS integrated Safety function can be initiated by activating Safety function inputs. This function helps to prevent the motor from exceeding the specified speed limit. If the motor speed exceeds the specified speed limit value, safety function STO is triggered.

Safe Brake Control (SBC) function

The SBC integrated Safety function provides a safe output signal to command an external relay in order to control external brakes.

Safe Maximum Speed (SMS) function

This function helps to prevent the speed of the motor from exceeding the predefined speed limit.
- Two different speed limits can be defined and can be selected by logic inputs.
- If the motor speed exceeds the predefined speed limit value, Safety function STO is triggered.

Once the SMS function is configured, it is continuously active.

Guard Door Locking (GDL) function

The GDL function allows the guard door lock to be released when the motor power is turned off.

PROFIsafe

Activation of the SS1 function

Activation of the SLS function
Activation of the SMS function
VW3A3807 PROFIsafe module

Presentation

The PROFIsafe module allows ATV340 variable speed drives to provide a fail-safe Ethernet connection between the drive and a safey PLC using the PROFIsafe protocol over PROFINET V2.

ATV340 is connected over Ethernet via the communication module PROFINET V2 (VW3A3647), allowing communication with the PROFIsafe module through tunneling functionality

It includes the following safety functions compliant with the IEC/EN 61800-5-2 standard:
- Safe Torque Off (STO)
- Safe Stop 1 (SS1)
- Safe Limited Speed (SLS)

The safety module also includes one additional safety functions:

Safe Maximum Speed (SMS)

Safety functions
Safe Torque Off (STO) function

The PROFIsafe module activates the integrated STO safety function of the drive, ensuring that no power capable of causing torque or force is supplied to the motor.

Safe Stop 1 (SS1) function

The SS1 integrated safety function causes a category 1 safe stop.
This function monitors the deceleration according to a dedicated deceleration ramp and shuts off the torque once standstill has been achieved.

Safely Limited Speed (SLS) function

The SLS integrated safety function can be initiated by activating safety function inputs. This function helps to prevent the motor from exceeding the specified speed limit. If the motor speed exceeds the specified speed limit value, safety function STO is triggered.

Safe Maximum Speed (SMS) function

This function helps to prevent the speed of the motor from exceeding the predefined speed limit.

Once the SMS function is configured, it is continuously active.

Conformity test

PROFIsafe V2.6 release.

VW3A3809 CIP Safety module

Presentation

The CIP Safety module allows ATV340 variable speed drive to provide a fail-safe Ethernet connection between the drive and a Safey PLC using Safety over EtherNet/IP protocol.

ATV340 is connected on the Ethernet connection with its embedded EtherNet/IP that allows to go up to the CIP Safety Module thanks to the tunneling functionality.

It includes the following safety function, compliant with the IEC/EN 61800-5-2 standard:

■ Safe Torque Off (STO) function SIL3/Ple *(2) (3)*.

The CIP Safety module is compatible with ATV340 firmware V2.1IE82 and higher.

Safety functions
Safe Torque Off (STO) function

This safety function activates the STO function in the drive.
No power that could cause torque or force is supplied to the motor.

Variable speed drives
Altivar Machine ATV340
Option: Braking resistors
VW3A7741

Presentation

Braking resistors allow Altivar Machine ATV340 drives to operate while braking to a standstill, by dissipating the braking energy. They enable maximum transient braking torque.

Braking resistors are designed to be located outside the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed in any way. The air should be free of dust, corrosive gas, and condensation.

The internal circuits of Altivar Machine drives have a built-in dynamic braking transistor. Depending on the drive rating, the enclosed external braking resistor with IP20 and IP23 protection is designed to comply with the EMC standard and monitored by a temperature-controlled switch or thermal overload relay.

Thermal monitoring

Braking resistors from VW3A7733 to VW3A7738 and from VW3A7742 to VW3A7756 are equipped with a thermal switch to detect overheating of the resistor. This thermal switch must be used upstream to the drive to switch off the mains contactor in case of overheating detection.

For more details, please refer to the wiring diagrams provided in the Instruction sheet - Braking resistors VW3A7730...757.

Applications

Braking resistors are designed for a defined cycle (see the 3 cycle types defined below). Depending on your own applications and cycles, you can use these resistors or define a new value.
■ Braking resistors for light braking cycles for machines with cycles and inertia. The braking power is limited to 1.5 Tn for 0.8 s every 40 s.
■ Braking resistors for medium braking cycles for machines with high inertia and conveyors. The braking power is limited to 1.35 Tn for 4 s every 40 s.
■ Braking resistors for severe braking cycles for machines with very high inertia and vertical movements (hoisting). The braking power is limited to 1.65 Tn for 6 s and Tn for 54 s every 120 s.
Below are the list of the associated braking resistors according to the required braking cycle (1).

Variable speed drives
Altivar Machine ATV340
Integrated EMC filters and additional EMC input filters

Altivar Machine drive ATV340 with integrated EMC filter

Altivar Machine drive ATV340 with additional EMC filter

Integrated EMC filters

Altivar Machine ATV340 drives have integrated radio interference input filters to comply with the EMC (electromagnetic compatibility) standard for variable speed electrical power drive products IEC 61800-3 category C2 or C3 and the European EMC Directive.

The integrated EMC filters comply with standard IEC 61800-3 for a maximum motor cable length listed below:

	Maximum length of shielded cable acc. to	
	IEC/EN 61800-3 category C2	IEC/EN 61800-3 category C3
For drives m/*ft*	m/*ft*	m/*ft*
Three-phase supply voltage: 380…480 V IP20		
ATV340U07...D22N4●	–	20/*66*
ATV340D30...D37N4E●	50/*164*	100/*328*
ATV340D45...D75N4E●	–	100/*328*

Additional EMC input filters

The additional EMC input filters enable the drives to meet more stringent requirements; they are designed to reduce conducted emissions on the AC supply below the limits of standard IEC 61800-3 category C2 or C3 (see).

Mounting on ATV340●●●N4●

Depending on the model, additional EMC filters can be mounted beside or underneath the drive.

Mounting the filter on the side of the drive: for ATV340U07...U75N4● drives
Mounting the filter underneath the drive: for ATV340D11…D22N4, ATV340D11…D75N4E, and ATV340D11...D22N4S drives

Use according to the type of AC supply

Additional EMC filters can only be used on TN (neutral connection) and TT (grounded neutral) type systems.

Standard IEC 61800-3, appendix D2.1, states that on IT systems (isolated or impedance grounded neutral), filters can cause permanent insulation monitors to operate in a random manner.
The effectiveness of additional filters on this type of system depends on the type of impedance between neutral and ground, and therefore cannot be predicted.
If a machine has to be installed on an IT system, one solution is to insert an isolation transformer and connect the machine locally on a TN or TT system.

Note:
ATV340U07...D22N4, ATV340U07...D37N4E●, and ATV340U07...D22N4S drives are compatible for use with maximum 100 m/328 ft shielded motor cable length with 4 kHz switching frequency.

ATV340D37...D75N4E● drives are compatible for use with maximum 100 m/328 ft shielded motor cable length with 2.5 kHz switching frequency.

(1) The filter selection tables give the maximum lengths for shielded cables connecting motors to drives. These maximum lengths are given as examples only, as they vary depending on the stray capacitance of the motors and the cables used. If motors are connected in parallel, it is the total length of all cables that should be taken into account.
(2) These values are given for a nominal switching frequency of 4 kHz.
(3) In: nominal filter current.

Line choke

3 ∼

M1
3 ∼

ATV340●●●N4
ATV340●●●N4E●
Presentation

Line chokes, also known as line reactors, provide improved immunity against overvoltages on the AC supply and can reduce harmonic distortion of the current produced by the drive.

The recommended chokes limit the input current. They have been developed in line with standard IEC 61800-5-1 (VDE 0160 level 1 high-energy overvoltages on the AC supply).

The inductance values are defined for a voltage drop between 3% and 5% of the nominal AC supply voltage. Values higher than this will cause loss of torque.

The use of line chokes is recommended in particular under the following circumstances:

■ AC line supply with significant disturbance from other equipment (interference, overvoltages)
■ AC line supply with voltage imbalance between phases > 1.8% of nominal voltage
■ Drive supplied by an AC line supply with very low impedance (in the vicinity of a power transformer 10 times more powerful than the drive rating)
■ Installation of a large number of frequency inverters on the same AC supply
■ Reduction of overloads on the cos φ correction capacitors, if the installation includes a power factor correction unit

Line chokes are mandatory for variable speed drives ATV340U07...D22N4● operating in normal duty mode, and have to be ordered seperately (see). External line chokes are not required for variable speed drives ATV340D30... D75N4E●, in which integrated DC chokes serve for the same purpose.

(1) Nominal supply voltage, U min = 380 V ∿, U max = 480 V ∿.
(2) A line choke is essential for the drive to operate in normal duty mode, so line current without choke is not applicable.
(3) For drives above 30 kW, ATV340D30N4E...D75N4E●, a DC choke is integrated, so an extra line choke is not required.

Schneider Electric

Variable speed drives
Altivar Machine ATV340
Output filters
Option: dv/dt filters
Altivar machine drive with dv/dt filter

VW3A5301

Presentation

ATV340 drives with a supply voltage of 380...480 V operate with the following maximum motor cable lengths: 100 m/*328 ft* for unshielded/shielded cables. ATV340 drives rated more than 4 kW, with a supply voltage of 380...480 V operate with the following maximum motor cable lengths: 150 m/*492 ft* for shielded cables, 300 m/*984 ft* for unshielded cables.

To limit the impact of dv/dt and overvoltages in the motor, it is recommended that an output filter is added for cables longer than 50 m/*164 ft* if the motor insulation type does not conform to IEC 60034-25.

For further information, please consult the White Paper entitled "An Improved Approach for Connecting VSD and Electric Motors".

Output filters are used to limit dv/dt at the motor terminals to 500 V/µs maximum for supply voltages up to 480 V.

Output filters are designed to limit overvoltages at the motor terminals to less than:
■ 800 V with a shielded cable 0 to 50 m (*0 to 164 ft*) long, with a 400 V supply voltage
■ 1,000 V with a shielded cable 50 to 150 m (*164 to 492 ft*) long, with a 400 V supply voltage
■ 1,500 V with a shielded cable 150 to 300 m (*492 to 984 ft*) long, with a 400 V supply voltage (up to 500 m (*1,640 ft*) with an unshielded cable)

The performance of dv/dt filters will be affected if the maximum cable lengths are exceeded. For an application with several motors connected in parallel, the cable length must include all cabling. If a cable longer than that specified is used, the dv/dt filters may overheat.

The switching frequency must be under 8 kHz.

(1) Values given depend on the nominal switching frequency of the drive. This frequency depends on the drive rating. These cable lengths are given as examples only as they can vary depending on the application. They correspond to motors conforming to IEC 60034-25 and NEMA MG1/31.2006.
(2) The filters are designed to operate in a switching frequency range of between 2 and 8 kHz.
*(3) Nominal filter current.*

ATV340 drive with common mode filter

Presentation

dv/dt filters reduce the overvoltage across windings and high frequency currents in differential mode. But they have no effect on the common mode current between phases and the cable shielding, and between the windings and the stator/rotor of the motor.

Common mode filters bring several benefits:
■ Reduction of RFI (radio frequency interference) of the motor cable and improvement of the effectiveness of the EMC filter for conducted emissions
■ Reduction of the high frequency currents circulating in the bearings of the motor and prevention of their damage

It is possible to use the common mode filter or the dv/dt filter at the output terminals of the drive.

Note: The selection of a common mode configuration depends on the type and length of motor cable. An abnormal increase in temperature indicates a possible saturation. Additional filters should be used to avoid it.

Variable speed drives

Altivar Machine ATV340
Option: ATV Regenerative units

ATVRD15N4

ATVRU75N4

Presentation

The main function of the ATV Regen product is to provide an option to regenerate energy back to the AC supply for heavy braking applications such as material working, material handling, and hoisting with easy configuration.

This option should be associated with Altivar drives in the 400 V series such as Altivar 340. The braking unit harmonic performance is the same as that of standard drives.

Features:
■ Chemical class 3C3 conforming to IEC/EN 60721
■ Mechanical class 3S2 conforming to IEC/EN 60721
■ -10..50 °C/*14...122 °F* without derating, up to 60 °C/*140 °F* with derating
■ Mechanical class 3S2 conforming to IEC/EN 60721
■ Built in EMC filter comply with standard IEC 61800-3

Applications

Circuit breaker/contactor/drive combinations help to ensure continuity of service in the installation.

The type of circuit breaker/contactor coordination selected can reduce maintenance costs in the event of a short-circuit on the drive input by minimizing the time required to make the necessary repairs and the cost of replacement equipment. The suggested combinations provide coordination according to the drive rating.

The drive controls the motor, provides a monitoring function against short-circuits between the drive and the motor, and helps protect the motor cable against overloads. Overload monitoring is provided by the drive's motor thermal monitoring function if this has been enabled. Otherwise, an external monitoring device such as a probe or thermal overload relay should be provided.
The circuit breaker helps protect the drive's power cables against short-circuits.

Variable speed drives and soft starters

A whole world of Services for your drives and soft starters by Schneider Electric
Support and services offer by Schneider Electric

Variable speed drives and soft starters are an important part of your operation, with downtime having a significant impact on your business. Protecting that investment through comprehensive services means that you can continue to deliver optimally throughout the lifecycle of your drive and soft starter. Our range of services is designed to help you get more out of your drives and soft starters, your operation, and to improve your environmental impact.

Plan — What are my options?
Establish your services including maintenance policy, support, and training

Install — How do I install and commission?
• Commissioning • Start up • Extended warranty

Operate — How do I operate and maintain?
• Remote technical support • Preventive maintenance
• Onsite expert assistance • Spare part management

Optimize — How do I optimize?
• Training services • EcoStruxure Asset Advisor

Renew — How do I extend and renew my solution?
• Drive revitalization • Drive and soft starter replacement

Circular economy — How do we contribute to the circular economy?
• Repair • Fast exchange by refurbished drive or soft starter *(1)*
• Spare parts • Take-back and recycling *(1)*

Install

■ **Extended Warranty** service helps you control your maintenance costs. Schneider Electric will provide a replacement drive and soft starter or repair the product on site during a period of one or three years more than the standard warranty, in all conditions covered by the extended warranty.

■ **Start-up** service is the first essential step in maintenance and optimal operational performance of the drive or soft starter. Our comprehensive review checks up to 100 parameters and is especially designed for drives and soft starters in simple applications.

■ **Commissioning** service ensures a reliable start for operations with more complex applications and drive systems. The unique requirements of your process need to be carefully considered to ensure efficient operations.

Operate

■ **Preventive Maintenance** service performs predetermined maintenance actions according to a product-specific schedule. The work is carried out by certified technical experts following Schneider Electric instructions. This service minimizes unplanned downtime and extends your equipment lifetime.

■ **Remote Technical Support** brings you expert product assistance over the phone, email, chat, or web for any technical questions relating to your drives and soft starters, including configuration, diagnostics, and maintenance. Our global support team is multi-lingual with support available up to R&D level experts if needed.

■ **On-Site Expert Assistance** service offers you highly skilled field service experts to troubleshoot and resolve drive or soft starter equipment-related matters at your site, as a back-up source of expertise for your personnel.

■ **Spare Part Management** service identifies and manages your critical spare parts either on your site or offsite. This service ensures that you have access to the spares you need without having to invest in capital to maintain the stock.

(1) Services available in countries that have the right structure and capabilities.

Schneider Electric

Variable speed drives and soft starters
A whole world of Services for your drives and soft starters by Schneider Electric

Support and services offer by Schneider Electric (continued)

Optimize

■ **Training** service offers eLearning, classroom, and onsite training provision to enhance the technical installation, commissioning, and maintenance competencies of your personnel. Added competence translates into further process efficiency and reliability, as well as employee satisfaction.

■ **EcoStruxure Asset Advisor** service enables you to move from reactive to predictive maintenance and access actionable insight provided by the advisor. The service predicts drive- and motor-related actions through connected devices and advanced algorithms monitored by Schneider Electric's experts.

Renew

■ **Drive Revitalization** is an excellent choice if you prefer to use your aging drives longer and want to extend their service life with affordable and comprehensive inspection and replacement of all critical parts.

■ **Drive and soft starter replacement** involves modernizing equipment by replacing the previous aged or obsolete product with a new one matched to the purpose. The service can be extended with engineering in case the device and process requires more advanced engineering.

Circular economy

■ **Spare Parts** are available from our local, regional, and global stocks. Original equipment parts from Schneider Electric are reliable and easily available. They will help to keep your product in operation for longer.

■ **Repair** allows you to extend the life of your drive or soft starter. The affected product can be replaced, or repaired on site or at our repair centers, depending on the type of product in question.

■ **Fast Exchange by refurbished drive or soft starter** *(1)* gives a second life to inoperative drives or soft starters. In this case, we offer an immediate exchange with a replacement refurbished drive or soft starter and take back the product, repair it, and keep it ready for the next exchange.

■ **Take-back and recycling** *(1)* is the last step to improve your environmental impact. Unrepairable products are dismantled, raw materials are collected and given a second life. Up to 85% of the product components can be recycled.

Service contracts secure recovery, availability, and outcome

Service contracts manage the safety and performance of your assets through well-defined maintenance plans tailored to your operational needs. The predefined service contract – Advantage Service Plan – and fully customizable "à la carte" service contract are built from the services in the "Operate" and "Optimize" phases and service levels defining availability, response, and lead times matching your particular needs. You will enjoy priority access to Schneider Electric support when you need it, as well as having an expert partner to plan the long-term evolution of your drives and soft starters.

mySchneider app

With the mySchneider app you have easy 24/7 access to product information and expert support. All registered users have access to additional features, such as real-time notifications, order tracking, product pricing, and availability. The mySchneider app is available for download from the IOS and Android app store.

Schneider Electric – helping you succeed

Schneider Electric, the leader in digital transformation of energy management and automation, has operations in more than 100 countries. With this global footprint we have certified field service representatives, regional expert and advanced level support up to product R&D to provide you the right support across the lifecycle of your drives and soft starters. Furthermore, we offer an extensive network of local and global repair centers and a logistics chain that underpins our ability to respond to your needs.

To order services or find out more, please contact your local Schneider Electric service center.
