Kinetix VPL Servo Motor Load Force Ratings

Kinetix VPL servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

(1) Operation beyond maximum speed requires DC-bus protection. Bus overvoltage speed is shown in parentheses. See the Kinetix 5700 Servo Drives User Manual, publication [2198-UM002](#), for more information on bus overvoltage speed, field-weakening mode, and the extended speed feature.

(2) Kinetix VPC motor is rated at or above IE4 efficiency for rated torque, speed, and temperature, with power supplied by a Kinetix 5700 drive, and switching at 4.0 kHz PWM frequency.

(3) Refer to Kinetix VPC Servo Motor Brake Specifications for brake rotor inertia and brake motor weight.

Field Weakening Mode

Kinetix VPC interior permanent magnet (IPM) motors are designed to operate in Field Weakening mode to widen the speed range. Operation in Field Weakening mode can result in Back EMF voltage increasing to a level that exceeds the DC-bus voltage if a loss of control occurs. When this loss of control occurs, the Back EMF voltage can charge the DC-bus to a level that can overvoltage the DC-bus caps and result in a failure of the common DC-bus.

Field Weakening Region

ATTENTION: Operation at speeds exceeding the Bus Overvoltage Speed requires the use of an active shunt, configured in the Studio 5000 Logix Designer® application, to protect the DC bus system from an overvoltage condition. DC-bus failure can cause damage to all drive modules in the bus group, not just the inverter connected to the Kinetix VPC servo motor. See the Kinetix 5700 Servo Drives User Manual, publication [2198-UM002](#), for information on active shunt selection and configuration.

Extended Speed Feature

The Extended Speed feature is implemented in the Studio 5000 Logix Designer application to help prevent accidental operation at unsafe speeds. With this feature, the Logix 5000™ controller calculates a Bus Overvoltage Speed based on the drive's maximum bus-voltage and the Back EMF of the motor. This is the maximum speed that does not risk damaging the drive modules in the bus group. By default, the Extended Speed feature limits motor velocity to the Bus Overvoltage Speed.

IMPORTANT Bus Overvoltage Speed, identified in the Field Weakening Region figure, is maximum speed for Kinetix VPC motors without cooling fans.

Kinetix VPC Servo Motor Load Force Ratings

Kinetix VPC servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. There are two sets of tables starting below that represent an L_{10} bearing fatigue life of 20,000 and 40,000 hours. Bearing fatigue life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Kinetix VPF Servo Motor Load Force Ratings

Kinetix VPF servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

(1) The cable connectors are rated IP66/IP67 and are not designed to withstand high-pressure washdown or washdown with aggressive cleaning compounds. Position connectors away from direct exposure to cleaning processes, for example, within washdown-rated conduit or junction boxes.

Refer to the Kinetix VPH Hygienic Stainless-steel Servo Motor Installation Instructions, publication [VPH-IN001](#), for mounting and installation information.

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering table chart below to understand the configuration of your motor. For questions regarding product availability, contact your Allen-Bradley distributor.

(1) Option 1 includes nickel-plated mating on-motor cable connector to 2090-CSxMIDxx single cable. Option 0 (flying leads) connects directly to DSL feedback connector kit and motor/brake connectors on the drive.

(2) This encoder option is available with only VPH-A/B063xx and VPH-A/B075xx motor frame sizes.

(3) This encoder option is available with only VPH-A/B100xx, VPH-A/B115xx, VPH-A/B130xx, and VPH-B165xx motor frame sizes.

(4) Rated speed hierarchy is only for comparative purposes. Use Motion Analyzer software to size and select motors for your application, and/or the torque/speed curves in the Kinetix 5500 Drive System Design Guide, publication [KNX-RM009](#), and the Kinetix 5700 Drive System Design Guide, publication [KNX-RM010](#).

(5) Not all combinations are available. Only the configurations for magnet stack length as listed in Technical Specifications - Kinetix VPH Servo Motors on [page 74](#) are available.

IMPORTANT The connector is O-ring sealed, but not designed to withstand direct high-pressure washdown with aggressive cleaning compounds. The 1...15 m (3.2...49.2 ft) cable extensions are provided so the connector can be positioned in an area away from direct exposure to the cleaning process, such as within washdown-rated conduit or junction boxes.

 - 18-bit resolution for 262,144 multi-turn absolute position feedback within 4096 turns (-W) option has 9-bit secondary safety channel

Kinetix 2090 Single Cable Technology

Motor connectivity reduced to a single connector and cable.

- Single cable eliminates hardware and wire terminations
- Purely digital two-wire communication integrated into the motor power cable
- Mating Kinetix 2090 single cables with:
 - TPE cable material for standard (non-flex) and continuous-flex cable
 - PVC cable material for standard (non-flex) and Halogen-free PUR continuous-flex cable
- Mating 2090-CSxM1Dx cables are available in 1.0 m (3.2 ft) increments. Total cable length includes the on-motor extension cable and varies depending on cable type and drive family.
- 2090-CSBM1P7-14AFxx cables are available in 1 m (3.2 ft) increments up to 4 m (13.1 ft) for ArmorKinetix DSD modules

IMPORTANT The sum of the cables from the Kinetix VPH motor to the ArmorKinetix DSD module cannot exceed 4 m (13.1 ft).

Maximum Cable Length Including On-motor Cable Extension

Cable Cat. No.	Motor Cable Type	On-motor TPE Cable Extension m (ft)	Kinetix 5500 Drives ^{(1) (2) (3)} m (ft)	Kinetix 5700 Drives ^{(1) (2)} m (ft)
2090-CSxM1Dx-xxxFxx	Single, continuous-flex cable	01 = 1 m (3.2 ft) 03 = 3 m (9.8 ft) 05 = 5 m (16.4 ft) 07 = 7 m (22.9 ft)	Cable length, max = 45 (148) Plus extension cable + 5 (16.4) Total cable length = 50 (164)	Cable length, max = 85 (279) Plus extension cable + 5 (16.4) Total cable length = 90 (295)
2090-CSxM1Dx-xxxAxx	Single, standard (non-flex) cable	09 = 9 m (29.5 ft) 12 = 12 m (39.4 ft) 15 = 15 m (49.2 ft)		

(1) This table illustrates how the motor cable extension is included in the maximum cable length calculation. However, there are other variables to consider. See Kinetix 5500 Servo Drives User Manual, publication [2198-UM001](#), or Kinetix 5700 Servo Drives User Manual, publication [2198-UM002](#), for maximum cable length specifications specific to those drive families.

(2) In this example, the motor cable extension specified in the motor catalog number is 5 m (16.4 ft).

(3) Applies to all Kinetix 5500 (frame 2 and 3) drives. For Kinetix 5500 (frame 1) drives in continuous-flex applications or Kinetix VPH on-motor cable extensions from 1...7 m (3.2...22.9 ft), 30 m (98.4 ft) is the maximum cable length.

IMPORTANT Because of the unique characteristics of Kinetix 2090 single cable technology, designed for and tested with Kinetix 5500 drives, Kinetix 5700 dual-axis inverters, ArmorKinetix DSD modules, and Kinetix VPH servo motors; building your own cables, using field modified Rockwell Automation® factory-delivered cable, or using third-party cables is not an option.

On-motor Cable Connections-to-Drive Options

Kinetix VPH motors are available with flying leads that wire to a 2198-KITCON-DSL (feedback) connector kit and motor power and brake connectors on the drive or SpeedTec DIN connector that connects to 2090-CSxM1Dx cables.

Kinetix VPH Servo Motors with Connector Option 1 (SpeedTec DIN connectors)

(1) The 2198-KITCON-DSL feedback connector kit is included with 2090-CSxM1DE cables.

Product specifications for Kinetix VPH on-motor cables are identical to 2090-CSxM1xx (TPE) motor cable. For Kinetix 2090 single cable specifications, refer to Kinetix Rotary and Linear Motion Cable Specifications Technical Data, publication [KNX-TD004](#).

Kinetix VPH Servo Motors with Connector Option 0 (flying leads)

(1) The 2198-KITCON-DSL feedback connector kit is included with Kinetix 5500 drives and can be purchased separately. The kit is not included with Kinetix VPH servo motors.

Kinetix VPH Servo Motor Options

The following motor options are available for Kinetix VPH servo motors:

- The positive air-pressure kit (catalog number MPS-AIR-PURGE) consists of a single fitting that is used to connect a positive-pressure air supply line, 0.1 bar, max (1.45 psi), to the motor interior. Positive air pressure inside the motor provides an additional level of protection against the ingress of foreign substances and moisture. No special tool is required for installation and removal.
- Shaft seal kits are available for field replacement. Shaft seals (PTFE) include a lubricant to reduce wear.

IMPORTANT Shaft seals are subject to wear and require periodic inspection and replacement. Replacement is recommended every 3 months, not to exceed 12 months, depending on use.

Kinetix VPH Servo Motor Load Force Ratings

Kinetix VPH servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Catalog Numbers - Kinetix VPS Servo Motors

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering table chart below to understand the configuration of your motor. For questions regarding product availability, contact your Allen-Bradley distributor.

(1) The motor has 5 m (16.4 ft) Kinetix 2090 TPE cable extension with nickel-plated connector extensions.
(2) Rated speed hierarchy is only for comparative purposes. Use Motion Analyzer software to size and select motors for your application, and/or the torque/speed curves in the Kinetix 5500 Drive System Design Guide, publication [KNX-RM009](#) and the Kinetix 5700 Drive System Design Guide, publication [KNX-RM010](#).
(3) Not all combinations are available. Only the configurations for magnet stack length as listed in Kinetix VPS Servo Motor (400V-class) Performance Specifications on [page 85](#) are available.

IMPORTANT The connectors are O-ring sealed, but not designed to withstand direct high-pressure washdown with aggressive cleaning compounds. The 5 m (16.4 ft) cables are provided so the connectors can be positioned in an area away from direct exposure to the cleaning process, such as within washdown-rated conduit or junction boxes.

Kinetix VPS Servo Motor High-resolution Encoders

Kinetix VPS servo motors are available with high-performance encoders with multi-turn (-P) high-resolution feedback:

- 18-bit resolution for 262,144 counts per revolution, multi-turn encoder (-P) provides absolute position feedback within 4096 turns
- Electromechanical design does not require a battery.

Kinetix 2090 Single Cable Technology

Motor connectivity reduced to a single connector and cable.

- Single cable eliminates hardware and wire terminations
- Purely digital two-wire communication integrated into the motor power cable
- Mating Kinetix 2090 single cables with:
 - TPE cable material for standard (non-flex) and continuous-flex cable
 - PVC cable material for standard (non-flex) and Halogen-free PUR continuous-flex cable
- Mating 2090-CSxM1Dx cables are available in 1.0 m (3.2 ft) increments. Total cable length includes the 5m (16.4 ft) extension cable attached to the motor and varies depending on cable type and drive family.

Maximum Cable Length Including Cable Extension

Cable Cat. No.	Motor Cable Type	Kinetix 5500 Drives ⁽¹⁾ m (ft)	Kinetix 5700 Drives ⁽¹⁾ m (ft)
2090-CSxM1Dx-xxxAxx	Single, standard (non-flex) cable	Cable length, max = 45 (148) Plus extension cable + 5 (16.4) Total cable length = 50 (164)	Cable length, max = 85 (279) Plus extension cable + 5 (16.4) Total cable length = 90 (295)
2090-CSxM1Dx-xxxFxx	Single, continuous-flex cable	Cable length, max = 25 (82.0) Plus extension cable + 5 (16.4) Total cable length = 30 (98.4)	

(1) This table illustrates how the motor cable extension is included in the maximum cable length calculation. However, there are other variables to consider. See Kinetix 5500 Servo Drives User Manual, publication [2198-UM001](#), or Kinetix 5700 Servo Drives User Manual, publication [2198-UM002](#), for maximum cable length specifications specific to those drive families.

IMPORTANT Due to the unique characteristics of single cable technology, designed for and tested with Kinetix 5500 drives, Kinetix 5700 dual-axis inverters, and Kinetix VPS servo motors, building your own cables or using third-party cable is not an option.

On-Motor Cable Connector/Cable Compatibility

Kinetix VPS servo motors are equipped with SpeedTec DIN connectors.

Product specifications for Kinetix VPS on-motor cables are identical to 2090-CSxM1xx (TPE) motor cable. For Kinetix 2090 single motor cable specifications, refer to Kinetix Rotary and Linear Motion Cable Specifications Technical Data, publication [KNX-TD004](#).

Kinetix VPS Servo Motor Options

Kinetix VPS servo motors are available with these configurable options:

- The positive air pressure accessory kit (catalog number MPS-AIR-PURGE) is mounted to the rear cover of the motor to provide positive air pressure and further reduce the chance of contamination inside the motor. No special tool is required for installation and removal.
- Shaft seal kits (with slinger) are available for field replacement. Shaft seals are made of PTFE and include a lubricant to reduce wear.

IMPORTANT Shaft seals are subject to wear and require periodic inspection and replacement. Replacement is recommended every 3 months, not to exceed 12 months, depending on use.

Kinetix VPS Servo Motor Load Force Ratings

Kinetix VPS servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Kinetix MPL Servo Motor High-resolution Encoders

Kinetix MPL servo motors are available with high performance encoders with a choice of single-turn (-E, -S) or multi-turn (-V, -M) high resolution feedback:

- 1024 sin/cos cycles per revolution for up to 21-bit resolution (2,097,152 counts per revolution) -M and -S (MPL-A/B3xx, MPL-A/B4xx, MPL-A/B45xx, MPL-A/B5xx, MPL-B6xx, MPL-B8xx, and MPL-B9xx motors).
- 128 sin/cos cycles per revolution for up to 18-bit resolution (262,144 counts per revolution) -E and -V (MPL-A/B15xx and MPL-A/B2xx motors).
- Single-turn encoder provides high-resolution absolute position feedback within one turn.
- Multi-turn encoder provides high-resolution absolute position feedback within 4096 turns. The electromechanical design does not require a battery.

Motor Connector/Cable Compatibility

Kinetix MPL servo motors are equipped with SpeedTec DIN connectors.

For information on transitioning your Kinetix MPL servo motor installation from bayonet cables to circular DIN cables, refer to Kinetix Rotary and Linear Motion Cable Specifications Technical Data, publication [KNX-TD004](#).

Kinetix MPL Servo Motor Options

Kinetix MPL servo motors are available with these options:

- 24V DC holding brake.
- Optional keyless shaft available in limited frame sizes with extended lead times (MPL-A/B3xx, MPL-A/B4xx, MPL-A/B45xx, and MPL-A/B5xx motors).
- Shaft seal kits are available, as are replacement kits for field installation. Shaft seals are made of nitrile and kits include a lubricant to reduce wear.

IMPORTANT Shaft seals are subject to wear and require periodic inspection and replacement. Replacement is recommended every 3 months, not to exceed 12 months, depending on use.

Kinetix MPL Servo Motor Load Force Ratings

Kinetix MPL servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Catalog Numbers - Kinetix MPM Servo Motors

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering table chart below to understand the configuration of your motor. For questions regarding product availability, contact your Allen-Bradley distributor.

(1) Resolver feedback is not available on all models.
(2) Not all combinations are available. Only the configurations for rated speed and magnet stacks, as listed in Kinetix MPM Servo Motor (200V-class) Performance Specifications on [page 108](#) and on [page 108](#), are available. Use Motion Analyzer software to size and select motors for your application.
(3) Base speed equals maximum speed at peak torque. Maximum speed is servo drive dependent.

Kinetix MPM Servo Motor High-resolution Encoders

Kinetix MPM servo motors are available with high performance encoders with a choice of single-turn (-S) or multi-turn (-M) high-resolution feedback:

- 1024 sin/cos cycles per revolution for up to 21-bit resolution (2,097,152 counts per revolution) -M and -S (MPM-A/B115x, MPM-A/B130x, MPM-A/B165x, and MPM-A/B215x motors).
- Single-turn encoder provides high-resolution absolute position feedback within one turn.
- Multi-turn encoder provides high-resolution absolute position feedback within 4096 turns. The electromechanical design does not require a battery.

Motor Connector/Cable Compatibility

Kinetix MPM servo motors are equipped with SpeedTec DIN connectors.

Kinetix MPM Servo Motor Options

Kinetix MPM servo motors are available with these options:

- 24V DC holding brake.
- The positive air-pressure kit (catalog number MPF-7-AIR-PURGE) is mounted on the feedback connector to provide positive air pressure to further reduce the chance of contamination inside the motor.
- Shaft seal kits are available, as are replacement kits for field installation. Shaft seals are made of nitrile and kits include a lubricant to reduce wear.

IMPORTANT Shaft seals are subject to wear and require periodic inspection and replacement. Replacement is recommended every 3 months, not to exceed 12 months, depending on use.

Kinetix MPM Servo Motor Load Force Ratings

Kinetix MPM servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Catalog Numbers - Kinetix MPF Servo Motors

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering table chart below to understand the configuration of your motor. For questions regarding product availability, contact your Allen-Bradley distributor.

(1) Not all combinations are available. Only the configurations for rated speed and magnet stack length, as listed in Kinetix MPF Servo Motor (200V-class) Performance Specifications on [page 118](#) and Kinetix MPF Servo Motor (400V-class) Performance Specifications on [page 119](#), are available. Use Motion Analyzer software to size and select motors for your application.

Kinetix MPF Servo Motor High-resolution Encoders

Kinetix MPF servo motors are available with high performance encoders with a choice of single-turn (-S) or multi-turn (-M) high resolution feedback:

- 1024 sin/cos cycles per revolution for up to 21-bit resolution (2,097,152 counts per revolution) -M and -S (MPF-A/B3xx, MPF-A/B4xx, MPF-A/B45xx, and MPF-A/B5xx motors).
- Single-turn encoder provides high-resolution absolute position feedback within one turn.
- Multi-turn encoder provides high-resolution absolute position feedback within 4096 turns. The electromechanical design does not require a battery.

Motor Connector/Cable Compatibility

Kinetix MPF servo motors are equipped with SpeedTec DIN connectors.

Kinetix MPF Servo Motor Options

Kinetix MPF servo motors are available with these options:

- 24V DC holding brake.
- The positive air-pressure kit (catalog number MPF-7-AIR-PURGE) is mounted on the feedback connector to provide positive air pressure to further reduce the chance of contamination inside the motor.
- Shaft seal kits are available for field replacement. Shaft seals are made of PTFE and the kit includes a lubricant to reduce wear.

IMPORTANT Shaft seals are subject to wear and require periodic inspection and replacement. Replacement is recommended every 3 months, not to exceed 12 months, depending on use.

Kinetix MPF Servo Motor Load Force Ratings

Kinetix MPF servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Catalog Numbers - Kinetix MPS Stainless-steel Servo Motors

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering table chart below to understand the configuration of your motor. For questions regarding product availability, contact your Allen-Bradley distributor.

(1) The motor has 3 m (9.8 ft) cables with nickel-plated connector extensions.

IMPORTANT The connectors are O-ring sealed, but not designed to withstand direct high-pressure washdown with aggressive cleaning compounds. The 3 m (9.8 ft) cables are provided so the connectors can be positioned in an area away from direct exposure to the cleaning process, such as within washdown-rated conduit or junction boxes.

(2) Not all combinations are available. Only the configurations for rated speed and magnet stack length, as listed in Kinetix MPS Servo Motor (200V-class) Performance Specifications on [page 126](#) and Kinetix MPS Servo Motor (400V-class) Performance Specifications on [page 126](#), are available. Use Motion Analyzer software to size and select motors for your application.

Kinetix MPS Stainless-steel Motor Load Force Ratings

Kinetix MPS servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Kinetix TLP Servo Motor Load Force Ratings

Kinetix TLP servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 40,000 hours. This 40,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Kinetix TL and TLY Compact Servo Motors

The Kinetix TL and TLY servo motors are low-inertia high-performance servo motors featuring metric and NEMA frame sizes. They combine a compact size with a high torque density afforded by their superior stator design. The result is a package that provides substantial power in a small footprint.

Kinetix TL Servo Motors

Kinetix TL compact motor performance specifications match the Kinetix TLY motor specifications identically, but are available in only metric frame sizes and with high-resolution absolute position encoders. Similar to the Kinetix TLY motors, Kinetix TL compact motors support frame sizes TL-A110, TL-A120, TL-A130, TL-A220, TL-A230, TL-A2530, TL-A2540, and TL-A410 (TL-A310 is not supported).

The Kinetix TL compact motors are equipped with rectangular plastic connectors and are intended for use with Kinetix 3 servo drives.

Kinetix TLY Servo Motors

Kinetix TLY motors are equipped with circular plastic connectors and when used with the Kinetix 2000, Kinetix 6000, or Ultra3000 drives, the Kinetix TLY motors are able to offer the benefits of Kinetix Integrated Motion.

Catalog Numbers - Kinetix TL and TLY Servo Motors

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering table chart below to understand the configuration of your motor. For questions regarding product availability, contact your Allen-Bradley distributor.

(1) Single-turn if used without battery backup.
(2) Not all combinations are available. Only the configurations for rated speed, as listed in [Technical Specifications - Kinetix TL and TLY Servo Motors](#) on [page 149](#), are available. Use Motion Analyzer software to size and select motors for your application.

For Kinetix TL and TLY connector kit catalog numbers, refer to Kinetix Rotary and Linear Motion Cable Specifications Technical Data, publication [KNX-TD004](#).

Kinetix TL and TLY Servo Motor Encoders

Kinetix TL and TLY motors are available with high-resolution or industry standard incremental encoder feedback:

- High-resolution, high performance encoders providing multi-turn absolute position feedback (131,072 counts/revolution) for smooth performance.
Servo drives compatible with multi-turn absolute position feedback require the appropriate connector kit, with battery, for absolute position backup in the event of a power loss.
- Industry standard incremental encoder feedback (2000 counts/revolution) applies to Kinetix TLY motors.

Motor Connector/Cable Compatibility

Kinetix TL and TLY motors are equipped with either threaded or rectangular plastic connectors.

Kinetix TLY Motor Connectors

Kinetix TL Motor Connectors

Kinetix TL and TLY Servo Motor Options

Kinetix TL and TLY servo motors are available with these options:

- 24V DC holding brake.
- Shaft seal kits are available, as are replacement kits for field installation. Lubricant is provided with each kit to reduce wear.

IMPORTANT Shaft seals are subject to wear and require periodic inspection and replacement. Replacement is recommended every 3 months, not to exceed 12 months, depending on use.

Transition Plates for N-Series Retrofit

Transition plates provide a means of retrofitting an existing N-Series motor with a Kinetix TLY NEMA motor. In most applications, the Kinetix TLY NEMA motors are physically smaller, but deliver the same torque rating as the N-Series motor it is replacing. Transition plates are not available for the N-56xx motors. Select your transition plate catalog number from the table below.

Kinetix TL and TLY Motor Load Force Ratings

Kinetix TL and TLY servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables below represent an L_{10} bearing fatigue life of 20,000 hours. This 20,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Kinetix RDB Direct-drive Servo Motors

Kinetix RDB servo motor design provides direct-coupling to the load, thus improving system performance and efficiency by eliminating the need for inefficient mechanical power transmission devices, such as gearboxes, timing belts and pulleys. The Kinetix RDB servo motors incorporate a bearingless housed configuration designed for applications where the load is already supported by its own bearings.

Catalog Numbers - Kinetix RDB Servo Motors

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering table chart below to understand the configuration of your motor. For questions regarding product availability, contact your Allen-Bradley distributor.

(1) Not all combinations are available. Only the configurations for rated speed and magnet stacks, as listed in Kinetix RDB Servo motor Performance Specifications on [page 160](#), are available. Use Motion Analyzer software to size and select motors for your application.

(2) Base speed equals maximum speed at peak torque. Maximum speed is servo drive dependent.

Kinetix RDB Servo Motor High-resolution Encoders

Kinetix RDB servo motors are available with high performance encoders with a choice of single-turn (-3) or multi-turn (-7) high-resolution feedback:

- Up to 4 million counts per revolution (-3 and -7) for smooth performance.
- Single-turn encoder provides high-resolution absolute position feedback within one turn.
- Multi-turn encoder provides high-resolution absolute position feedback within 4096 turns. The electromechanical design does not require a battery.

Kinetix HPK Servo Motor Load Force Ratings

Kinetix HPK servo motors are capable of operating with the maximum radial or maximum axial shaft loads listed in the following tables. Radial loads listed are applied in the middle of the shaft extension. The tables starting below represent an L_{10} bearing fatigue life of 10,000 hours. This 10,000-hour life does not account for possible application-specific life reduction that can occur due to bearing grease contamination from external sources. Maximum operating speed is limited by motor winding.

Shaft Options

Shaft Dimensions

Kinetix MMA main motors all come with a standard diameter shaft, however, an increased or decreased diameter option is available depending on frame size. See [Dimensions - Kinetix MMA Asynchronous Main Motors on page 194...205](#). In addition to diameter, here you can also determine the balancing degree of the shaft, per IEC 60034-14. All Kinetix MMA main motors come with 'A' balancing degree as standard, but 'B' balancing degree can be specified for improved performance. (The 'B' balancing degree has reduced vibration for smoothest operation.) This balancing degree can be performed with half- or full-key balancing techniques, depending on what best fits your application. (See [Motor Catalog Number Explanation on page 178](#) for selections).

Shaft Key

Kinetix MMA main motors can be selected with a smooth or keyed shaft option. Shaft keys are dimensioned for an interference fit, slightly larger than the opening. An interference fit provides a secure and rigid mating connection. See Kinetix MMA Asynchronous Main Motors Installation Instructions, publication [MM-IN001](#), for dimensions.

ATTENTION: Do not strike the shaft, key, couplings, or pulleys with tools during installation or removal. Damage may occur to the motor bearings and the feedback device if sharp impact to the shaft is applied during installation of couplings and pulleys, or a shaft key. Failure to observe these safety procedures could result in damage to the motor and its components.

Shaft Seals

Your Kinetix MMA motor requires a shaft seal, and comes as standard equipment. See Kinetix MMA Asynchronous Main Motors Installation Instructions, publication [MM-IN001](#), for details.

Terminal Box Options

Kinetix MMA main motors come equipped with a terminal box that provides the terminal board for motor power and other options that require wiring. The standard configuration is top-mounted, with cable holes coming out of the right side. (see the following diagram). Depending on motor frame size and configuration, this terminal box can also come as right-mounted or left-mounted orientation, with cable holes pre-drilled into front/rear, or bottom directions. (A few special reduced-size holes are also available. See [Motor Catalog Number Explanation on page 178](#) for more details.)

Brake Options

Kinetix MMA main motors can be configured with an optional electromagnetic holding brake. Most brakes can also be configured with a hand-release or a status switch (microswitch) for additional functionality. See the [Motor Catalog Number Explanation](#) for more information.

The brakes are spring actuated, and are suitable for use as parking/holding brake. This type of brake can be used to hold the load regardless if power is applied to the motor. The brake holding torques are designed to meet or exceed the continuous stall torque of the motor, however, some motors can develop a torque value that may exceed the holding torque capability. See [Kinetix MMA Main Motor Brake Specifications on page 192](#) for brake holding torques.

All electromagnetic holding brakes have two additional options, they can be equipped with brake hand-releases and status switches.

When the brake is installed, it limits the maximum speed of the motor and, in some cases, vertical installation is not allowed. Consult the motor technical specification tables beginning on [page 187](#) and brake technical specifications tables on [page 192](#) for the maximum allowed speed or contact [Rockwell Automation Support](#) for more details.

The hand-release is a non-standard option that can be used on all motor shaft heights, except shaft height 225 with the 400V AC control. This manually operated brake hand-release is used to assist an operator to disengage an electromagnetically charged holding brake.

See Kinetix MMA Asynchronous Main Motors Installation Instructions, publication [MM-IN001](#), for additional information.

Blower Options

For MMA-B080xxx through MMA-B160xxx size motors, a 1-phase axial blower is standard. For MMA-B132xxx and larger size motors, a 3-phase radial blower option is available. Additionally, for MMA-B160xxx and larger size motors, a 3-phase axial blower option is available. For MMA-B132xxx and larger size motors, you can order a radial blower option. As a standard configuration, the blower is mounted on the non-drive end (NDE) top side of the motor. You can remount the radial blower on either the right or left side as needed.

The Kinetix MMA main motors contain a separately powered blower. There are two blower types, axial and radial, with various input voltages.

(1) Without a blower, the IC17 clean-air option does not carry a cURus certification from the factory.

A motor can also be ordered without a blower, and is prepared with an adapter shroud that receives clean-air from an external source. This option is called IC17. See the [Motor Catalog Number Explanation](#) for more information.

Bearing Options

There are multiple bearing options available for selection with your Kinetix MMA main motor:

- Deep groove ball bearing
- Roller bearing
- High-speed bearing

Select one of these bearings based on your application requirements, including the DE or NDE location on the motor. Deep groove ball bearings are standard, and provide the broadest axial, radial, and speed coverage. Roller bearings provide the best performance for radial (side) shaft loading. An example is a belt and pulley transmission that is attached to the shaft. High-speed bearings are preferred if your application spends most of its duty-cycle above the motor rated speed.

There are additional features for some of the three types of bearings.

- Regreasable bearings exist with a fitting that allows periodic maintenance by adding additional grease. (See Kinetix MMA Asynchronous Main Motors Installation Instructions, publication [MM-IN001](#), for types of grease used.)
- A brush can be specified if your application is considered to generate shaft currents that discharge through the motor shaft, causing potential damage. These brushes are installed on the NDE side.

IMPORTANT

If damaging shaft currents are a concern, an Aegis Ring can also be chosen in the Special Options section of the motor catalog. This shaft grounding device has the same function as the brush, but can offer better results in two ways. First, the Aegis ring can offer better protection if the shaft currents are considered high-frequency. Second, the Aegis Ring has a longer life than the brush, similar to that of the bearings themselves. The Aegis ring lasts longer, and for more lifetime rpm, than the brush.

- An insulated bearing is one with an external or internal ring that is electrically insulated with aluminum oxide. A hybrid ceramic bearing is one with a ceramic ball, which is better than the insulated bearing because it can be used at high speed.

The combinations of these features have some dependencies that are based on motor frame size and configuration. See [Motor Catalog Number Explanation on page 178](#).

Flange Options

All Kinetix MMA main motors come with standard flange sizes for mounting. However, an increased or decreased flange size is available. Additionally, 'extra precise' and 'vertical (shaft-up)' options exist for even greater mounting flexibility. A Kinetix MMA motor with 'extra precise flange' option is the same as a standard flange, but with tighter tolerance for run-out and planarity of the key surface features. Some flanges (shaft height dependent) can be prepared for 'vertical (shaft-up)' mounting. There is no change to the actual flange surface, but rather a spring-loaded feature has been added to the bearings for greater support of the load while the motor is mounted in this vertical position. See [Motor Catalog Number Explanation](#) and [Dimensions - Kinetix MMA Asynchronous Main Motors on page 194](#) for important dependencies and more details.

Certifications Options

Kinetix MMA motors, like all Kinetix products, come standard with many pre-qualified global certifications (see [Certifications - Kinetix Rotary Motion on page 208](#)). For the Kinetix MMA motor, you can choose whether to have cURus (UL/CSA) certification, which is a requirement for operation in some countries, but not all countries. If your installation does not require cURus certification, the standard insulation system is sufficient, and the additional insulation, protection, and third-party verification requirements can be avoided in your catalog configuration process.

Protection Options

Kinetix MMA main motors come standard with IP54 ingress protection rating, but can be configured for IP55 and other increased protective options. For high-humidity environments, a 'tropical' windings option is available. This option is a special varnish that is applied to the motor windings to help prevent fungus, mold, or other unfavorable results of high-humidity conditions. Stainless steel screws can be specified for all external fasteners because of their anti-corrosion properties.

- C3 anti-corrosion: Coating is applied to motor body and end-caps for protection in industrial environments that are classified as C3 'medium' corrosion levels.
- C5 anti-corrosion: Coating is applied, before paint, to all external, non-plastic surfaces of the motor for protection in industrial (not marine) environments classified as C5 'heavy' corrosion levels. After full application, external surfaces are painted with primer and final paint with proper coating thickness. This method delivers additional protection of surfaces even if paint is nicked or scratched.

Thermal Sensor Options

Your Kinetix MMA main motor comes standard with two thermal sensors, for protection and optimal performance. A thermostat (TS) provides a normally-closed signal to the inverter, protecting the motor windings from overheating due to prolonged motor overloading or malfunction. The other thermal sensor that comes standard is a PT1000 sensor, which is an RTD-style thermistor. This PT1000 sensor, which must be connected to a 1756-IRT8I Logix thermal sensor module when using a Kinetix 5700 drive, can monitor the motor winding temperature in real-time. (If your Kinetix MMA main motor is running on a PowerFlex 750-series drive, this PT1000 thermistor is read by the drive and a specific feedback cable is required.)

Other temperature sensors are available as selectable configurations. If your system or application prefers, a KTY 84-130 RTD-style thermistor can also be embedded in the motor windings for measuring real-time temperature. Additionally, a PT100 RTD-style thermistor can be selected to monitor your MMA bearing temperatures.

Special Options

Kinetix MMA main motors can have some final, special options selected upon configuration.

- A Reinforced Insulation option is available for MMA-B132xxx and larger size motors where the first and last turns of the motor windings are separated and insulated for every coil. Select this option if you are using a Kinetix 5700 AFE regenerative bus supply system.
- A Vibrations certificate can be supplied with your motor, which details the test report of your rotor balancing degree (A or B, depending on your shaft selection.) This report is placed inside the motor terminal box.
- For systems and applications with shaft voltage discharge concerns, an Aegis ring can be supplied to minimize or reduce the risk of potentially damaging currents.

Motor Brake Application Guidelines

The brake option offered on these rotary motors are holding brakes designed to hold the motor shaft at 0 rpm up to the rated brake holding torque. The brakes release when voltage is applied to the brake coil. Voltage and polarity supplied to the brake must be as specified to be sure of proper brake performance. The Kinetix MMA main motor does have a hand release brake option.

The brakes are not designed for stopping the rotation of the motor shaft. Use drive inputs to stop motor shaft rotation. The recommended method to stop the motor shaft from rotating is to command the drive to decelerate the motor to 0 rpm and engage the holding brake only after the motor has decelerated to 0 rpm.

If system power fails, the brakes can withstand use as stopping brakes. However, use of the brakes as stopping brakes creates rotational mechanical backlash that can damage the system, increase brake pad wear, and reduce brake life. The brakes are not designed, nor are they intended, to be used as a safety device.

A separate power source is required to disengage the brake. This power source can be controlled by the motor controls, in addition to manual operator controls. Electrical arcing can occur at the relay contacts until the brake power dissipates. A customer supplied diode or metal oxide varistor (MOV) is recommended to prevent arcing. Use of an MOV can also reduce the time to mechanically engage the brake. For brake response time specifications, refer to the motor brake specification tables.

For more information on the use of holding brakes, see the Vertical Load and Holding Brake Management Application Technique, publication [MOTION-AT003](#).

Suppression Device for Brake Relay Contacts

(1) Kinetix 2000, Kinetix 5500, Kinetix 5700, Kinetix 6000, Kinetix 6200, Kinetix 6500, and Kinetix 7000 servo drives provide motor brake relay outputs and supply an MOV arc suppressor. Customer supplied arc suppressor is not required unless the coil current of motor brake is greater than the maximum brake current rating of the drive relay output.
