SQUARE D METER-PAK Meter Centers address the needs of electrical contractors, utilities and their customers in multiunit housing and commercial applications.

UNDERGROUND SERVICE WIREWAYS FOR MP METER-PAK[™] METER CENTERS

Attaches easily to any SQUARE D MP METER-PAK Meter Center to offer secure protection for service conductors

SQUARE D Underground Service Wireways are a convenient solution for protecting a utility's underground service conductors that terminate in MP METER-PAK Meter Centers.

These Underground Service Wireways are not load-bearing; they are intended for use only as a means to cover and secure service entrance cables prior to entering a wall-mounted SQUARE D MP METER-PAK device. The units connect easily to any MP METER-PAK Meter Center by attaching to tapped hub provisions in the bottom endwall of the metering device.

Customer Driven Design

- Cover latch accommodates up to three different types of utility seals.
- All locking provisions are made of durable, corrosion-resistant stainless steel for long-lasting security.

Easy to Install

- Mounts easily to MP METER-PAK device's underground, bolt-on hub provisions using supplied hardware.
- Open bottom with ½" rolled edge reduces possibility of cutting conductor insulation.
- Wireway covers are secured by latching means (no screws to lose).

Proven Reliability and Performance

- Gasketed, bushed openings in top provide watertight seal between the wireway and MP METER-PAK device.
- Constructed of 14-gauge painted galvanneal steel for superior corrosion protection in all applications.
